Different from other similar education platforms, the Analytics-Arch-201 study materials will allocate materials for multi-plate distribution, rather than random accumulation without classification. How users improve their learning efficiency is greatly influenced by the scientific and rational design and layout of the learning platform. The Analytics-Arch-201 study materials are absorbed in the advantages of the traditional learning platform and realize their shortcomings, so as to develop the Analytics-Arch-201 Study Materials more suitable for users of various cultural levels. If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the Analytics-Arch-201 study materials provided many study parts of the plates is good enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.

For Salesforce Analytics-Arch-201 exam applicants who don't always have access to the internet, desktop-based practice exam software is appropriate. This Salesforce Analytics-Arch-201 practice test software is compatible with Windows computers. Much like the web-based practice exam, our desktop practice test simulates the actual test. This Salesforce Certified Tableau Architect (Analytics-Arch-201) exam simulation software has the same features as our web-based practice exam, including most probable real exam questions, customizable practice test sessions, and quick result on how you did. To eliminate mistakes and exam anxiety, we advise using this Salesforce Analytics-Arch-201 practice test software.

Earn the Credential of Salesforce Analytics-Arch-201 Exam

We prepare everything you need to prepare, and help you pass the exam easily. The Analytics-Arch-201 exam braindumps of us have the significant information for the exam, if you use it, you will learn the basic knowledge as well as some ways. We offer free update for you, and you will get the latest version timely, and you just need to practice the Analytics-Arch-201 Exam Dumps. We believe that with the joint efforts of both us, you will gain a satisfactory result.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
Topic 2	<ul style="list-style-type: none">• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	<ul style="list-style-type: none">• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Salesforce Certified Tableau Architect Sample Questions (Q73-Q78):

NEW QUESTION # 73

When developing a strategy to collect and analyze operating system and hardware-related metrics for a Tableau Server deployment, what should be prioritized to ensure server stability and performance?

- A. Upgrading hardware components annually, regardless of current performance metrics
- B. Setting up real-time alerts for any hardware failures or operating system errors
- C. Periodically rebooting the server to ensure a fresh operating environment
- D. Concentrating on optimizing disk storage as it is the primary factor affecting Tableau Server performance

Answer: B

Explanation:

Setting up real-time alerts for any hardware failures or operating system errors Prioritizing the setup of real-time alerts for hardware failures or operating system errors is crucial in a strategy for monitoring a Tableau Server environment. This proactive approach ensures immediate awareness of critical issues that could impact server stability and performance, allowing for swift resolution or mitigation. Option B is incorrect because focusing solely on optimizing disk storage neglects other important metrics like CPU, memory, and network performance. Option C is incorrect as periodic reboots are not a substitute for continuous monitoring and may disrupt service un-necessarily. Option D is incorrect because hardware upgrades should be based on performance metrics and needs, not on a fixed annual schedule.

NEW QUESTION # 74

A large organization with a dynamic workforce is integrating Tableau Cloud into their operations. They require an efficient method to manage user accounts as employees join, leave, or change roles within the company. What is the best approach to automate user provisioning in this scenario?

- A. Delegating user account management to individual department heads
- B. Using a single shared user account for all employees to simplify access
- C. Manual user account creation and deletion by the IT team for each employee
- **D. Implementing SCIM for automated user provisioning and deprovisioning**

Answer: D

Explanation:

Implementing SCIM for automated user provisioning and deprovisioning SCIM allows for automated and efficient management of user accounts in a dynamic workforce, handling changes in employment status and roles without manual intervention. Option A is incorrect because manual account management is inefficient and prone to errors in a large, dynamic organization. Option C is incorrect as using a shared account compromises security and does not provide individual user accountability. Option D is incorrect because it disperses the responsibility and can lead to in-consistent account management practices.

NEW QUESTION # 75

In a Tableau environment utilizing both Tableau Server and Tableau Cloud, what consideration is important when choosing an authentication method?

- **A. Ensuring the method allows for the synchronization of user roles and permissions between Tableau Server and Tableau Cloud**
- B. It should support automatic user provisioning in both Tableau Server and Tableau Cloud
- C. The method must be compatible with Tableau Server's version regardless of its compatibility with Tableau Cloud
- D. The authentication method must allow for different user permissions in Tableau Server and Tableau Cloud

Answer: A

Explanation:

Ensuring the method allows for the synchronization of user roles and permissions between Tableau Server and Tableau Cloud When choosing an authentication method for a Tableau environment that includes both Tableau Server and Tableau Cloud, it is important to ensure that the method allows for synchronization of user roles and permissions between the two plat-forms. This synchronization is key to maintaining consistent access control and user management across both environments. Option A is incorrect because the requirement for different user permissions in Tableau Server and Tableau Cloud is not a standard consideration for authentication methods. Option B is incorrect as automatic user provisioning is beneficial but not a primary consideration for choosing an authentication method in mixed environments. Option C is incorrect because compatibility with both Tableau Server and Tableau Cloud is important, not just with the version of Tableau Server.

NEW QUESTION # 76

A large organization plans to consolidate several Tableau Server instances into a single server. What is the most important consideration to ensure a successful consolidation?

- A. Consolidating all servers simultaneously to minimize the transition period
- **B. Thoroughly planning the integration of data sources, user permissions, and content from each server**
- C. Focusing solely on the technical aspects and not on the user impact of consolidation
- D. Immediately decommissioning all other servers before starting the consolidation process

Answer: B

Explanation:

Thoroughly planning the integration of data sources, user permissions, and content from each server Careful planning of how to integrate data sources, user permissions, and content is crucial to ensure that all elements function cohesively in the new consolidated server, minimizing disruptions to users and business operations. Option A is incorrect because consolidating all servers simultaneously can be overwhelming and may lead to significant issues. Option C is incorrect as neglecting the impact on users can result in access issues and dissatisfaction. Option D is in-correct because decommissioning other servers before consolidation can

disrupt ongoing operations and access to data.

NEW QUESTION # 77

After installing Tableau Server on a Linux system, you notice that the server is not integrating properly with an external LDAP server for user authentication. What should be the first trouble-shooting step?

- A. Reconfiguring all user roles and permissions within Tableau Server
- B. Changing the LDAP server to a different authentication model
- C. Installing additional security certificates on the LDAP server
- D. Verifying the network connectivity and port accessibility between the Tableau Server and the LDAP server

Answer: D

Explanation:

Verifying the network connectivity and port accessibility between the Tableau Server and the LDAP server The first step in troubleshooting integration issues between Tableau Server on Linux and an external LDAP server is to verify network connectivity and port accessibility. This includes ensuring that the necessary ports are open and that there are no network barriers preventing communication between the two servers. Option A is incorrect because changing the LDAP server's authentication model does not address potential connectivity issues. Option C is incorrect as reconfiguring user roles and permissions within Tableau Server is unrelated to LDAP integration issues. Option D is incorrect because installing additional security certificates on the LDAP server is unlikely to resolve a connectivity or integration issue.

NEW QUESTION # 78

.....

Our website is here to provide you with the accurate Analytics-Arch-201 real dumps in PDF and test engine mode. Using our latest Analytics-Arch-201 training materials is the only fast way to clear the actual test because our test answers are approved by our experts. The content of our Analytics-Arch-201 Braindumps Torrent is easy to understand that adapted to any level of candidates. It just needs few hours to your success.
