

DP-300 Certification Exam Dumps & DP-300 Testdump

P.S. Free 2026 Microsoft DP-300 dumps are available on Google Drive shared by Pass4training: <https://drive.google.com/open?id=1j3oayQdxZJwP0-afUsQ67ZbFtAay0AOu>

Are you planning to crack the Microsoft DP-300 certification test but don't know where to get updated and actual Microsoft DP-300 exam dumps to get success on the first try? If you are, then you are on the right platform. Pass4training has come up with Real DP-300 Questions that are according to the current content of the DP-300 exam.

Career Prospects

As a certified Azure database administrator, there are different job roles that you can explore. These include a Database Administrator, a Database Engineer, a Database Architect, a System Administrator, an IT Azure Cloud Engineer, and a Service Engineer, among others. The average salary to expect from any of these positions is \$77,670 per annum. However, the professionals with advanced experience can earn above the average industry standard.

The DP-300 certification exam is ideal for database administrators, cloud database administrators, and database developers who want to enhance their knowledge and skills in managing and administering relational databases on Azure. Administering Relational Databases on Microsoft Azure certification exam is also suitable for individuals who are responsible for designing and implementing database solutions on Azure, and want to validate their skills and knowledge.

Microsoft DP-300 Exam is designed for professionals who want to demonstrate their expertise in administering relational databases

on Microsoft Azure. Administering Relational Databases on Microsoft Azure certification validates the candidate's ability to perform tasks such as implementing security, managing backups and restoring databases, optimizing performance, and monitoring and troubleshooting databases. The DP-300 exam measures the candidate's knowledge and skills in the latest technologies used in Azure, including Azure SQL Database, Azure SQL Managed Instance, and Azure Synapse Analytics.

Microsoft DP-300 Exam Dumps Offers Exam Passing Money Back Guarantee

Pass4training is a very good website to provide a convenient service for the Microsoft certification DP-300 exam. Pass4training's products can help people whose IT knowledge is not comprehensive pass the difficulty Microsoft certification DP-300 exam. If you add the Microsoft Certification DP-300 Exam product of Pass4training to your cart, you will save a lot of time and effort. Pass4training's product is developed by Pass4training's experts' study of Microsoft certification DP-300 exam, and it is a high quality product.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q361-Q366):

NEW QUESTION # 361

Drag and Drop Question

You have an Azure subscription that contains an Azure SQL database named SQLDb1. SQLDb1 contains a table named Table1. You plan to deploy an Azure web app named webapp1 that will export the rows in Table1 that have changed.

You need to ensure that webapp1 can identify the changes to Table1. The solution must meet the following requirements:

- Minimize compute times.
- Minimize storage.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

□

Explanation:

<https://learn.microsoft.com/en-us/sql/relational-databases/track-changes/about-change-tracking-sql-server?view=sql-server-ver16>

To track changes, change tracking must first be enabled for the database and then enabled for the tables that you want to track within that database. The table definition does not have to be changed in any way, and no triggers are created.

NEW QUESTION # 362

Case Study 2 - Contoso, Ltd

Overview

General Overview

Contoso, Ltd. is a financial data company that has 100 employees. The company delivers financial data to customers.

Physical Locations

Contoso has a datacenter in Los Angeles and an Azure subscription. All Azure resources are in the US West 2 Azure region.

Contoso has a 10-Gb ExpressRoute connection to Azure.

The company has customers worldwide.

Existing Environment

Active Directory

Contoso has a hybrid Azure Active Directory (Azure AD) deployment that syncs to on-premises Active Directory.

Database Environment

Contoso has SQL Server 2017 on Azure virtual machines shown in the following table.

□

SQL1 and SQL2 are in an Always On availability group and are actively queried. SQL3 runs jobs, provides historical data, and handles the delivery of data to customers.

The on-premises datacenter contains a PostgreSQL server that has a 50-TB database.

Current Business Model

Contoso uses Microsoft SQL Server Integration Services (SSIS) to create flat files for customers.

The customers receive the files by using FTP.

Requirements

Planned Changes

Contoso plans to move to a model in which they deliver data to customer databases that run as platform as a service (PaaS) offerings. When a customer establishes a service agreement with Contoso, a separate resource group that contains an Azure SQL database will be provisioned for the customer. The database will have a complete copy of the financial data. The data to which each customer will have access will depend on the service agreement tier. The customers can change tiers by changing their service agreement.

The estimated size of each PaaS database is 1 TB.

Contoso plans to implement the following changes:

Move the PostgreSQL database to Azure Database for PostgreSQL during the next six months.

Upgrade SQL1, SQL2, and SQL3 to SQL Server 2019 during the next few months.

Start onboarding customers to the new PaaS solution within six months.

Business Goals

Contoso identifies the following business requirements:

Use built-in Azure features whenever possible.

Minimize development effort whenever possible.

Minimize the compute costs of the PaaS solutions.

Provide all the customers with their own copy of the database by using the PaaS solution.

Provide the customers with different table and row access based on the customer's service agreement.

In the event of an Azure regional outage, ensure that the customers can access the PaaS solution with minimal downtime. The solution must provide automatic failover.

Ensure that users of the PaaS solution can create their own database objects but be prevented from modifying any of the existing database objects supplied by Contoso.

Technical Requirements

Contoso identifies the following technical requirements:

Users of the PaaS solution must be able to sign in by using their own corporate Azure AD credentials or have Azure AD credentials supplied to them by Contoso. The solution must avoid using the internal Azure AD of Contoso to minimize guest users.

All customers must have their own resource group, Azure SQL server, and Azure SQL database. The deployment of resources for each customer must be done in a consistent fashion.

Users must be able to review the queries issued against the PaaS databases and identify any new objects created.

Downtime during the PostgreSQL database migration must be minimized.

Monitoring Requirements

Contoso identifies the following monitoring requirements:

Notify administrators when a PaaS database has a higher than average CPU usage.

Use a single dashboard to review security and audit data for all the PaaS databases.

Use a single dashboard to monitor query performance and bottlenecks across all the PaaS databases.

Monitor the PaaS databases to identify poorly performing queries and resolve query performance issues automatically whenever possible.

PaaS Prototype

During prototyping of the PaaS solution in Azure, you record the compute utilization of a customer's Azure SQL database as shown in the following exhibit.

Role Assignments

For each customer's Azure SQL Database server, you plan to assign the roles shown in the following exhibit.

You need to implement a solution to notify the administrators. The solution must meet the monitoring requirements.

What should you do?

- A. Add a diagnostic setting that logs Timeouts and streams to an Azure event hub.
- B. Add a diagnostic setting that logs QueryStoreRuntimeStatistics and streams to an Azure event hub.
- C. Create an Azure Monitor alert rule that has a static threshold and assign the alert rule to an action group.
- **D. Create an Azure Monitor alert rule that has a dynamic threshold and assign the alert rule to an action group.**

Answer: D

Explanation:

Notify administrators when a PaaS database has a higher than average CPU usage.

With Dynamic Thresholds, we use a unique ML technology to identify the patterns and come up with a single alert rule that has the right thresholds and accounts for seasonality patterns such as hourly, daily, or weekly.

NEW QUESTION # 363

You have an Azure subscription that contains an Azure SQL database named SQLDb1. SQLDb1 contains a table named Table1.

You plan to deploy an Azure web app named webapp1 that will export rows in Table1 that have changed.

You need to ensure that webapp1 can identify the changes to Table1. The solution must meet the following requirements:

- * Minimize compute times.

- * Minimize storage.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

☐

Answer:

Explanation:

☐

1 - ALTER DATABASE SQLDb1 SET CHANGE_TRACKING = ON

2 - ALTER TABLE dbo.Table1 ENABLE CHANGE_TRACKING

3 - From webapp1, connect to SQLDB1....

NEW QUESTION # 364

You have SQL Server on an Azure virtual machine named SQL1.

SQL1 has an agent job to back up all databases.

You add a user named dbadmin1 as a SQL Server Agent operator.

You need to ensure that dbadmin1 receives an email alert if a job fails.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

☐

Answer:

Explanation:

☐

1 - Enable the email settings for the SQL Server Agent.

2 - Create a job alert

3 - Create a job notification

Reference:

<https://docs.microsoft.com/en-us/sql/ssms/agent/notify-an-operator-of-job-status>

<https://docs.microsoft.com/en-us/sql/ssms/agent/assign-alerts-to-an-operator>

NEW QUESTION # 365

You have an Azure subscription.

You need to deploy an Azure SQL managed instance that meets the following requirements:

- * Optimize latency.

- * Maximize the memory-to-vCore ratio.

Which service tier and hardware generation should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation:

☐

NEW QUESTION # 366

.....

Passing the test DP-300 certification can help you realize your goal and find an ideal job. Buying our DP-300 latest question can help you pass the exam successfully. DP-300 exam question provides the free update and the discounts for the old client and our experts check whether our test bank has been updated on the whole day and if there is the update the system will send the update automatically to the client. Thus you can have an efficient learning and a good preparation of the exam. It is believed that our DP-300 latest question is absolutely good choices for you
