The Cisco 400-007 certification exam has grown in popularity in today's modern Cisco era. Success in the 400-007 exam gives aspirants the chance to upskill and remain competitive in the challenging job market. Those who successfully crack the Cisco Certified Design Expert (CCDE) Written Exam (400-007) test prove to their employers that they are skilled enough to get well-paying jobs and promotions. TestsDumps is aware that preparing with invalid Cisco 400-007 Exam Questions wastes money and time.

Cisco 400-007 Exam is a challenging but rewarding certification for IT professionals who want to become Cisco Certified Design Experts. It tests the candidate's knowledge and skills in designing complex networks, providing solutions for network infrastructure, and implementing advanced technologies. Passing the exam requires extensive preparation and a deep understanding of network design principles and advanced networking technologies, but it is well worth the effort for those who want to advance their careers in the networking field.

Nowadays, there are more and more people realize the importance of 400-007, because more and more enterprise more and more attention it. If someone pass the 400-007 exam and own relevant certificates that mean he had good grasp of this field of knowledge, that is to say, he will be popular and valued by more enterprise. In order to help most candidates who want to Pass

400-007 Exam, so we compiled such a study materials to make 400-007 exam simply. And our high pass rate of the 400-007 practice material is more than 98%.

Cisco 400-007 exam covers a wide range of topics related to network design, including network protocols, security, scalability, and network optimization. Candidates are expected to have a deep understanding of these topics and be able to apply their knowledge in real-world scenarios. 400-007 exam is also designed to test the candidate's ability to analyze and evaluate network requirements and design solutions that meet these requirements.

The CCDE certification is widely recognized in the industry as a mark of expertise and excellence in network design. It is intended for professionals who work in large-scale network environments and are responsible for designing and implementing complex network infrastructures. The CCDE certification also demonstrates an individual's ability to think strategically and prioritize business needs when designing networks, making them a valuable asset to any organization. The Cisco 400-007 Exam is the first step towards achieving this prestigious certification.

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q355-Q360):

NEW QUESTION # 355

Virtualisation pose a special challenges for NAC because virtual servers can move around a data center, and the VLAN can change as servers move. What is an option that can be used to improve security in this condition?

- A. traffic encryption
- B. application-based security
- **C. role-based control**
- D. in-band traffic control

Answer: C

Explanation:

Virtual servers moving across different physical hosts and VLANs create challenges for traditional network access control (NAC) because the network location and VLAN membership of a server can change dynamically.

Role-based control assigns network access and security policies based on the identity or role of the device or user rather than static network attributes like IP address or VLAN. This allows consistent enforcement of security policies regardless of where the virtual server moves within the data center.

This approach improves security by ensuring that access rights and restrictions follow the workload or user, not the physical or logical network location.

NEW QUESTION # 356

Company XYZ asks for design recommendations for Layer 2 redundancy. The company wants to prioritize fast convergence and resiliency elements. In the design, which two technologies are recommended? (Choose two.)

- **A. Use UniDirectional Link Detection**
- B. Configure DHCP snooping on the switches.
- C. Use BPDU guard.
- **D. Design MLAG/MC-LAG into the network wherever possible.**
- E. Use root guard.

Answer: A,D

Explanation:

* A (MLAG/MC-LAG): Multi-chassis Link Aggregation (MLAG or MC-LAG) provides fast convergence by eliminating STP dependency and creating active-active Layer 2 uplinks.

* E (UDLD): UniDirectional Link Detection helps quickly detect and disable one-way fiber failures, preventing loops before STP reacts.

Why other options are incorrect:

* B: DHCP snooping provides security against rogue DHCP but not redundancy or fast convergence.

* C: Root guard protects root bridge integrity but doesn't enhance failover speed.

* D: BPDU guard protects edge ports but does not contribute to core redundancy or convergence.

NEW QUESTION # 357

What are two key design principles when using a hierarchical core-distribution-access network model?
(Choose two)

- A. The core layer is designed first, followed by the distribution layer and then the access layer
- B. The core layer provides server access in a small campus.
- **C. A hierarchical network design model aids fault isolation**
- D. The core layer controls access to resources for security
- **E. A hierarchical network design facilitates changes**

Answer: C,E

NEW QUESTION # 358

Which two types of planning approaches are used to develop business-driven network designs and to facilitate the design decisions?
(Choose two)

- A. cost optimization approach
- **B. strategic planning approach**
- C. modular approach
- D. business optimization approach
- **E. tactical planning approach**

Answer: B,E

NEW QUESTION # 359

Which solution component helps to achieve comprehensive threat protection and compliance for migration to multicloud SDX architectures?

- A. Platform-oriented architecture
- **B. SASE architecture**
- C. OSASE architecture
- D. System-oriented architecture

Answer: B

Explanation:

* D (SASE - Secure Access Service Edge):SASE integrates networking and security functions (e.g., SD- WAN, firewall, CASB, ZTNA) into a single cloud-native service model, designed specifically for multicloud and distributed environments.

Other options explained:

* A/B/C: These do not represent industry-standard security frameworks like SASE.
