Exam Dumps Web-Development-Applications Collection, Web-Development-Applications Reliable Exam Papers
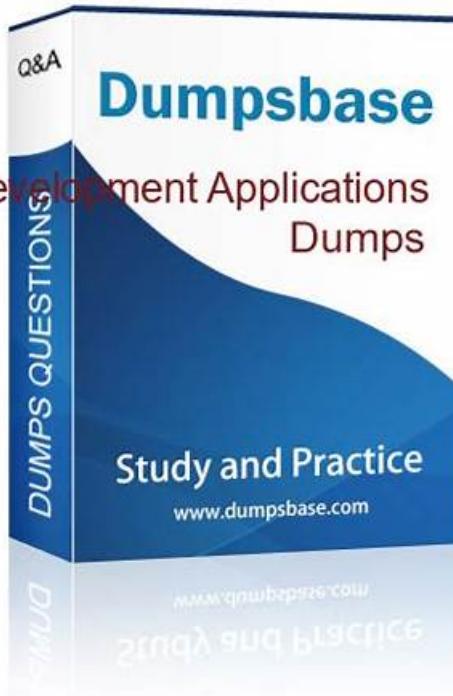

Even the fierce competition cannot stop demanding needs from exam candidates. To get more specific information about our Web-Development-Applications learning quiz, we are here to satisfy your wish with following details. So you can get detailed information with traits and information about our Web-Development-Applications Real Exam requested on the website. You can free download the demos of our Web-Development-Applications exam questions and click on every detail that you are interested.

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.
Topic 2	• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.

Topic 3	• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
Topic 4	• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.

Web-Development-Applications Reliable Exam Papers | New Web-Development-Applications Test Answers

It can be difficult to prepare for the WGU Web-Development-Applications exam successfully, but with actual and updated WGU Web Development Applications (Web-Development-Applications) exam questions, it can be much simpler. The difference between successful and failed Web-Development-Applications Certification Exam attempts can be determined by studying with real Web-Development-Applications exam questions.

WGU Web Development Applications Sample Questions (Q91-Q96):

NEW QUESTION # 91
Which tag is required when importing the jQuery library?

- A. `<body>`
- B. `<meta>`
- C. `<script>`
- D. `<section>`

Answer: C

Explanation:
> "The `<script>` tag is used to include JavaScript code or import external JavaScript libraries such as jQuery into an HTML document." Example:
```html
<script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
```
References:
* MDN Web Docs: HTML <script> element
* jQuery Documentation: Getting Started

NEW QUESTION # 92
A web designer inserts an image into a web page.
Which CSS attribute should this designer use to ensure that there is one of pixel of space between the line image and the surrounding elements?

- A. Margin
- B. Content
- C. border
- D. Padding

Answer: A

Explanation:
To ensure that there is one pixel of space between the image and the surrounding elements, the margin property should be used.
* CSS Margin Property: The margin property is used to create space around elements, outside of any defined borders.
* Usage Example:
img {
margin: 1px;
}
In this example, the margin: 1px; rule sets a margin of 1 pixel around the image, creating the desired space.
References:
* MDN Web Docs on Margin
* W3C CSS Specification on Margin

NEW QUESTION # 93
Which step helps ensure that code passes validation?

- A. Avoiding references prior to HTML version 5
- B. Adopting multiple standards
- C. Avoiding references prior to HTML version 4.01
- D. Adopting a single standard

Answer: D

Explanation:
Validation checks whether a web page is written according to the rules defined by a particular standard (such as HTML5 or CSS3).
To pass validation consistently, it's essential to adhere to one standard throughout the page or project.
"Adopting a single markup standard ensures uniform structure and syntax, reducing errors and inconsistencies that prevent validation success."
"Mixing different standards can lead to validation errors and unpredictable behavior in web browsers." References:
W3C Markup Validation Service Documentation
HTML5 Coding Standards - W3C

NEW QUESTION # 94
What is it called when a user must continue to resubmit a form until it is accepted?

- A. Auto-complete
- B. Formatting
- C. Pogo-sticking
- D. In-line validation

Answer: C

Explanation:
> "Pogo-sticking occurs when users repeatedly jump between a form and error messages, resubmitting until successful. This leads to a poor user experience."
>
> It is commonly addressed using in-line validation, which provides immediate feedback.
References:
* UX Design Literature: Pogo-sticking behavior
* MDN Web Docs: Form validation techniques

NEW QUESTION # 95
Given the following code:
Var a = "true";
What is the data type of d?

- A. Boolean
- B. Undefined
- C. Object
- D. String

Answer: D

Explanation:
The data type of the variable a is determined by the value assigned to it. In JavaScript, if a value is enclosed in double or single quotes, it is treated as a string.
* Variable Assignment:
* Given the code:
var a = "true";
* The value "true" is enclosed in double quotes, making it a string.
* Explanation:
* Option A: Boolean is incorrect because the value "true" is a string, not a boolean.
* Option B: String is correct because the value is enclosed in double quotes.
* Option C: Object is incorrect because the value is a primitive string.
* Option D: Undefined is incorrect because the variable a is assigned a value.
* References:
* MDN Web Docs - JavaScript Data Types
* W3Schools - JavaScript Data Types

NEW QUESTION # 96
