Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q43-Q48):

NEW QUESTION # 43
Which component of Anypoint Platform belongs to the platform control plane?

- A. Anypoint Connectors
- B. API Manager
- C. Runtime Replica

- D. Runtime Fabric

Answer: B

Explanation:
Control Plane vs. Runtime Plane:
Control Plane: The set of components that manage, monitor, and design APIs and applications. This includes API Manager, Runtime Manager (the console), Anypoint Exchange, and Design Center3.
Runtime Plane: The infrastructure where the applications actually run (execute). This includes the Mule Runtime engine, Runtime Fabric, and CloudHub workers.
API Manager: It sits in the Control Plane and pushes policies (governance) down to the runtime engines (gateways).

NEW QUESTION # 44
According to the National Institute of Standards and Technology (NIST), which cloud computing deployment model describes a composition of two or more distinct clouds that support data and application portability?

- A. Hybrid cloud
- B. Community cloud
- C. Public cloud
- D. Private cloud

Answer: A

Explanation:
NIST Definition: The NIST definition of Hybrid Cloud is explicitly "a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability." 1 MuleSoft Context: This is highly relevant to MuleSoft's Runtime Plane options. A customer might run some apps in CloudHub (Public Cloud) and others on Runtime Fabric (Private Data Center), creating a Hybrid deployment to ensure data portability and local processing where needed.
Why others are incorrect:
Public Cloud: Open for open use by the general public (e.g., AWS, Azure).
Private Cloud: Exclusive use by a single organization.
Community Cloud: Exclusive use by a specific community of consumers from organizations that have shared concerns.

NEW QUESTION # 45
What is a defining characteristic of an Integration-Platform-as-a-Service (IPaaS)?

- A. Code-first
- B. No-code
- C. On-premises
- D. Cloud-based

Answer: D

Explanation:
Definition of iPaaS: Gartner and MuleSoft define iPaaS (Integration Platform as a Service) as a suite of cloud services enabling the development, execution, and governance of integration flows connecting any combination of on-premises and cloud-based processes, services, applications, and data within individual or across multiple organizations.
The Key Characteristic: The "as a Service" suffix explicitly denotes a Cloud-based delivery model1 11111111.
MuleSoft Context: CloudHub is the iPaaS component of the Anypoint Platform. It is a fully managed, multi-tenant, cloud-based integration platform where you deploy API implementations without managing the underlying hardware.

NEW QUESTION # 46
An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

- A. Customer Relationship Management (CRM)
- B. IT Service Management (ITSM)

- C. Business-to-Business (B2B)
- D. Supply Chain Management (SCM)

Answer: A

Explanation:
Customer Relationship Management (CRM): A CRM system (like Salesforce) is specifically designed to manage a company's interactions with current and potential customers5.
Key Functionality: It stores contact information, identifies sales opportunities, records service issues, and manages marketing campaigns-perfectly matching the requirement to "increase cross-selling" and "track prospect data"6.
Why others are incorrect:
SCM: Manages the flow of goods and services (logistics/inventory)7.
ITSM: Manages IT services (help desk tickets)8.
B2B: Refers to the exchange of products/services between businesses, not the system of record for prospect data9.

NEW QUESTION # 47
According to MuleSoft's IT delivery and operating model, which approach can an organization adopt in order to reduce the frequency of IT project delivery failures?

- A. Decouple central IT projects from the innovation that happens within each line of business
- B. Stop scope creep by centralizing requirements-gathering
- C. Adopt an enterprise data model
- D. Prevent technology sprawl by reducing production of API assets

Answer: A

Explanation:
The Problem (IT Delivery Gap): Traditional IT operating models often treat IT as a centralized factory, which becomes a bottleneck. The business demands change faster than Central IT can deliver, leading to project failures or delays.
The Solution (Decoupling): MuleSoft advocates for a new operating model (C4E) where Central IT produces reusable assets (System APIs) and then "gets out of the way." Innovation at the Edge: By decoupling core IT from the Line of Business (LOB), the LOB developers can self-serve those assets to build their own Process and Experience APIs. This allows innovation to happen in parallel across the organization, rather than waiting in a single queue, thus reducing failure rates associated with bottlenecks. 1111
