

DumpExam EX380 Exam Dumps and Practice Test Software

If you're still learning from the traditional old ways and silently waiting for the test to come, you should be awake and ready to take the exam in a different way. Study our EX380 study materials to write "test data" is the most suitable for your choice, after recent years show that the effect of our EX380 Study Materials has become a secret weapon of the examinee through qualification examination, a lot of the users of our EX380 study materials can get unexpected results in the examination.

The pass rate is 98.75% for EX380 learning materials, and if you choose us, we can ensure you that you will pass the exam just one time. We are pass guarantee and money back guarantee. We will refund your money if you fail to pass the exam. In addition, EX380 learning materials of us are compiled by professional experts, and therefore the quality and accuracy can be guaranteed. EX380 Exam Dumps of us offer you free update for one year, so that you can know the latest version for the exam, and the latest version for EX380 exam braindumps will be sent to your email automatically.

Free PDF 2026 EX380: Pass-Sure Red Hat Certified Specialist in OpenShift Automation and Integration Complete Exam Dumps

DumpExam provides latest EX380 practice exam questions and EX380 certifications training material products for all those customers who are looking to pass EX380 exams. There is no doubt that the EX380 exams can be tough and challenging without valid EX380 brain dumps. We offer the guaranteed success with high marks in all EX380 exams. Our multiple EX380 certifications products let customers prepare and assess in the best way possible. We provide in-depth EX380 Study Material in the form of EX380 PDF dumps questions answers that will allow you to prepare yourself for the exam. EX380 exams PDF question answers also come with one year free update. We also provide live support chat to all our customers who have concerns about EX380 exams.

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q29-Q34):

NEW QUESTION # 29

GitOps and MachineConfig - Trigger Argo CD Synchronization by Repository Update

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Confirm that the repository being pushed to is the same repository watched by the GitOps/Argo CD application. This linkage is essential because GitOps acts only on configured source repositories and paths.

Step 2: Commit the MachineConfig changes.

The lab uses:

```
git commit -am "Add MachineConfig for motd"
```

Step 3: Push the changes to the tracked branch.

The lab uses:

```
git push origin main
```

Step 4: Allow Argo CD to detect the repository change and begin synchronization.

In a standard GitOps model, the controller compares the Git repository to the cluster state and applies drift correction or new desired resources.

Detailed explanation:

This sub Task SIMULATION is the operational purpose behind the previous Git command Task SIMULATION . The point is not merely to store a file in Git; it is to update the declarative source that Argo CD uses to reconcile the cluster. Once the repository is updated, Argo CD detects the new commit and syncs the MachineConfig into the cluster according to its application definition. This demonstrates a core automation principle in OpenShift GitOps: administrators do not treat the cluster as the primary editable surface. Instead, they modify Git and let the automation layer enforce state. That provides traceability, peer review potential, rollback capability, and consistency across environments.

NEW QUESTION # 30

Service Accounts and RBAC - Grant Cluster Reader Role

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Confirm the service account exists in auth-audit.

It must exist before a role can be assigned to it.

Step 2: Run the command:

```
oc adm policy add-cluster-role-to-user cluster-reader systemserviceaccount:auth-audit:audit
```

Step 3: Verify the binding is added.

The lab output shows:

```
clusterrole.rbac.authorization.k8s.io/cluster-reader added: "systemserviceaccount:auth-audit:audit"
```

Detailed explanation:

This binds the cluster-reader cluster role to the audit service account. The full subject format system:

serviceaccount:namespace:name is required because OpenShift RBAC needs the exact service account identity. The cluster-reader role is broader than a project-scoped view role because it allows read-level access across cluster resources. This is appropriate for auditing or inspection use cases where the account must observe but not modify. The distinction between cluster roles and namespaced roles is important: cluster roles apply to non-namespaced resources and broad cluster visibility, while local roles are limited to individual projects. This Task is a classic RBAC operation that combines identity creation with controlled privilege assignment.

NEW QUESTION # 31

Backup and Restore - Fix SCC for Restored Application

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Identify the application namespace after restore.

The lab shows the namespace as my-app-namespace.

Step 2: Run the SCC assignment command:

```
oc adm policy add-scc-to-user anyuid -z default -n my-app-namespace
```

Step 3: Confirm the role binding is applied.

The lab output shows:

```
clusterrole.rbac.authorization.k8s.io/systemopenshift:scc:anyuid added: "default"
```

Detailed explanation:

After a restore, the application may fail if its pods require a security context not permitted by the default SCC allocation. This

command grants the anyuid SCC to the default service account in the my-app-namespace project. The -z default syntax targets the

default service account, which many restored workloads use if no custom service account is defined. The anyuid SCC allows

containers to run with arbitrary user IDs, which some legacy or prebuilt images require. In OpenShift, SCC mismatches commonly

cause pods to remain in pending or crash-related states. Assigning the proper SCC resolves those admission issues so workloads

can start successfully. This step is therefore a post-restore operational fix to align security policy with application requirements.

NEW QUESTION # 32

Spread replicas using podAntiAffinity

Task Information : Configure payments/api to prefer scheduling pods on different nodes.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Patch deployment with preferred podAntiAffinity
- * `oc -n payments patch deploy api --type=merge -p '{`
- * `"spec":{"template":{"spec":{"affinity":{"`
- * `"podAntiAffinity":{"`
- * `"preferredDuringSchedulingIgnoredDuringExecution":[{"`
- * `"weight":100,`
- * `"podAffinityTerm":{"`
- * `"labelSelector":{"matchLabels":{"app":"api"}},`
- * `"topologyKey":"kubernetes.io/hostname"`
- * `}`
- * `}]`
- * `}`
- * `}}}}`
- * `'`
- * Encourages spread across nodes to reduce single-node impact.
- * Verify spread
- * `oc -n payments get pods -o wide`

NEW QUESTION # 33

Create an Argo CD Application (OpenShift GitOps)

Task Information : Create an Argo CD Application that syncs from Git into namespace gitops-demo with automated sync enabled.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create target namespace
- * `oc new-project gitops-demo`
- * Destination must exist (unless Argo is configured to auto-create).
- * Create Application manifest
- * `apiVersion: argoproj.io/v1alpha1`
- * `kind: Application`
- * `metadata:`
- * `name: demo-app`
- * `namespace: openshift-gitops`
- * `spec:`
- * `project: default`
- * `source:`
- * `repoURL: https://git.example.com/org/repo.git`
- * `targetRevision: main`
- * `path: manifests/demo`
- * `destination:`
- * `server: https://kubernetes.default.svc`
- * `namespace: gitops-demo`
- * `syncPolicy:`
- * `automated:`
- * `prune: true`
- * `selfHeal: true`
- * `automated: enables auto sync.`

- * prune: removes deleted objects from Git.
- * selfHeal: corrects drift.
- * Apply Application
- * oc apply -f demo-app.yaml
- * Verify sync health
- * oc -n openshift-gitops get application demo-app -o yaml | grep -i -E "sync|health" -n
- * oc -n gitops-demo get all

NEW QUESTION # 34

.....

You can choose one of version of our EX380 study guide as you like. There are three versions of our EX380 exam dumps. All of the content are the absolute same, just in different ways to use. Therefore, you do not worry about that you get false information of EX380 Guide materials. According to personal preference and budget choice, choosing the right goods to join the shopping cart. Then you can pay for it and download it right away.

EX380 Latest Exam Dumps: <https://www.dumpexam.com/EX380-valid-torrent.html>

As the EX380 certification exams and tests developing rapidly, more and more people realize that they need to take some EX380 tests to improve their skill to cope with work stress, EX380 study dumps have a pass rate of 98% to 100% because of the high test hit rate, If you try our EX380 study materials but fail in the final exam, we can refund the fees in full only if you provide us with a transcript or other proof that you failed the exam, Many shoddy learning materials and related products are in circulation in the market, but we are reliable, having a look at our free demo of EX380 Latest Exam Dumps - Red Hat Certified Specialist in OpenShift Automation and Integration free study demo can dispel your misgivings.
