PSE-Cortex-Pro-24 Valid Braindumps Pdf Will Be Your Powerful Weapon to Pass Palo Alto Networks Systems Engineer Professional - Cortex

Many people are afraid that after they buy our PSE-Cortex-Pro-24 guide torrent they may fail in the exam and the refund procedure will be very complicated. We guarantee to you that the refund process is very simple and only if you provide us the screenshot or the scanning copy of your failure marks we will refund you in full immediately. If you have doubts or problems about our PSE-Cortex-Pro-24 Exam Torrent, please contact our online customer service or contact us by mails and we will reply and solve your problem as quickly as we can. We won't waste your money and your time and if you fail in the exam we will refund you in full immediately at one time. We provide the best PSE-Cortex-Pro-24 questions torrent to you and don't hope to let you feel disappointed.

We are concerted company offering tailored services which include not only the newest and various versions of PSE-Cortex-Pro-24 practice guide, but offer one-year free updates of our PSE-Cortex-Pro-24 exam questions services with patient staff offering help 24/7. So there is considerate and concerted cooperation for your purchasing experience accompanied with patient staff with amity. Their enrichment is dependable and reliable on the PSE-Cortex-Pro-24 training braindumps.

First-grade PSE-Cortex-Pro-24 Valid Braindumps Pdf to Obtain Palo Alto Networks Certification

As we always want to do better in this career, our research center has formed a group of professional experts responsible for researching new technology of the PSE-Cortex-Pro-24 study materials. The technology of the PSE-Cortex-Pro-24 practice prep will be innovated every once in a while. As you can see, we never stop innovating new version of the PSE-Cortex-Pro-24 Exam Questions. We really need your strong support. We always adopt the kind and useful advices of our loyal customers who wrote to us and gave us their opinions on their study.

Palo Alto Networks Systems Engineer Professional - Cortex Sample Questions (Q144-Q149):

NEW QUESTION # 144
What must a customer deploy prior to collecting endpoint data in Cortex XSIAM?

- A. Playbook

- B. XDR agent
- C. External dynamic list
- D. Broker VM

Answer: B

Explanation:
25 web pages
As a Palo Alto Cortex Professional, I'll provide a detailed explanation for Question 118: What must a customer deploy prior to collecting endpoint data in Cortex XSIAM? along with the reasoning and references based on Palo Alto Networks' official documentation and product knowledge.
C: XDR Agent
Cortex XSIAM (Extended Security Intelligence and Automation Management) is an AI-driven security operations platform designed to centralize and automate security operations across an enterprise, including endpoint, network, cloud, and identity data. To collect endpoint data specifically, Cortex XSIAM relies on the Cortex XDR Agent, which is a lightweight software component installed on endpoints (such as laptops, desktops, or servers). This agent is responsible for gathering telemetry data, monitoring endpoint activity, and enforcing security policies, which are then sent to the Cortex XSIAM cloud for analysis, detection, and response.
Here's why the XDR Agent is the correct choice and why the other options do not apply:
Option A: Playbook
* Explanation: A playbook in Cortex XSIAM (or its predecessor, Cortex XSOAR) is a predefined workflow that automates incident response tasks, such as investigating alerts or remediating threats.
While playbooks are critical for automation and orchestration, they are not involved in the initial collection of endpoint data. Playbooks operate on data that has already been collected and ingested into the system. Therefore, deploying a playbook is not a prerequisite for collecting endpoint data.
* Conclusion: Incorrect.
Option B: Broker VM
* Explanation: The Broker VM is an optional component in the Cortex ecosystem that can be deployed to enhance connectivity and functionality, such as acting as a proxy for endpoints to communicate with the Cortex cloud, collecting logs, or running additional services. While it can facilitate data forwarding or log collection in certain scenarios (e.g., from third-party sources), it is not a mandatory requirement for collecting endpoint data directly from devices managed by Cortex XSIAM. The XDR Agent can communicate with the Cortex cloud independently without a Broker VM.
* Conclusion: Incorrect.
Option C: XDR Agent
* Explanation: The Cortex XDR Agent is the core component required to collect endpoint data in Cortex XSIAM. It is installed on supported endpoints (e.g., Windows, macOS, Linux, or Android devices) and performs several key functions:
* Data Collection: Gathers detailed telemetry, including process execution, file activity, network connections, and system events.
* Prevention: Blocks exploits, malware, and fileless attacks using AI-driven techniques.
* Detection and Response: Provides real-time data to the Cortex cloud for advanced analytics and incident investigation. Without the XDR Agent deployed on endpoints, Cortex XSIAM cannot collect the necessary data to monitor, detect, or respond to endpoint-based threats. This makes it the essential prerequisite for endpoint data collection.
* Conclusion: Correct.
Option D: External Dynamic List (EDL)
* Explanation: An External Dynamic List (EDL) is a feature in Palo Alto Networks' ecosystem used to import and manage dynamic lists of indicators (e.g., IP addresses, URLs, or domains) for use in security policies or threat intelligence. While EDLs can enhance threat detection by providing additional context, they are not involved in the process of collecting endpoint data. They are a supplementary tool rather than a requirement for data collection.
* Conclusion: Incorrect.
References from Palo Alto Networks:
* Cortex XSIAM Datasheet (Palo Alto Networks):
* "Cortex XSIAM unifies best-in-class security operations functions, including Endpoint Detection and Response (EDR)... The platform leverages the Cortex XDR Agent to prevent endpoint attacks and collect full telemetry for detection and response."
* This highlights the XDR Agent's role as the mechanism for endpoint data collection.
* Cortex XSIAM Solution Brief (Palo Alto Networks):
* "XSIAM requires the deployment of the XSIAM Endpoint Agent to appropriate and compatible endpoints to collect telemetry and enforce security."
* This directly ties the agent to the data collection process.
* Cortex XDR Agent Documentation (Palo Alto Networks Cortex Documentation Portal):
* The agent is described as "a lightweight agent that stops threats with Behavioral Threat Protection, AI, and cloud-based analysis while collecting endpoint telemetry for extended detection and response."
* Available at: docs-cortex.paloaltonetworks.com.
* What is Cortex XSIAM? (Palo Alto Networks Website):

* "Endpoint Protection Platform (EPP): Prevents endpoint attacks with a proven endpoint agent that blocks exploits, malware, and fileless attacks and collects full telemetry for detection and response."
* This reinforces the agent's foundational role in endpoint data collection.

NEW QUESTION # 145

Which feature of Cortex Xpanse allows it to identify previously unknown assets?

- A. Continuous internet scanning
- B. Dynamic asset registration
- C. Scheduled network scanning
- D. Active directory enumeration

Answer: A

Explanation:
Cortex Xpanse uses continuous internet scanning to identify previously unknown assets. This feature allows the platform to continuously monitor the internet for new or unregistered assets that could be associated with an organization's network, providing real-time visibility into potential exposure or vulnerabilities.

NEW QUESTION # 146

What are two ways Cortex XSIAM monitors for issues with data ingestion? (Choose two.)

- A. The Data Ingestion Health page identifies deviations from normal patterns of log collection
- B. The Cortex XSIAM Command Center dashboard will display a red icon if a data source is having issues.
- C. It automatically runs a copilot playbook to troubleshoot and resolve ingestion issues.
- D. The tenant's compute units consumption will change dramatically, indicating a collection issue.

Answer: A,B

Explanation:
The Data Ingestion Health page provides visibility into the normal patterns of log collection and highlights any deviations, which helps identify issues early on.
he Cortex XSIAM Command Center dashboard displays a red icon when there is an issue with a data source, providing a quick visual indication of ingestion problems.

NEW QUESTION # 147

When preparing for a Cortex XSOAR proof of value (POV), which task should be performed before the evaluation is requested?

- A. Ensuring that the customer has single sign-on (SSO) configured in their environment
- B. Planning for every different use case the customer has for the solution
- C. Building out an executive-IeveI proposal detailing the product capabilities
- D. Gathering a list of the different integrations that will need to be configured

Answer: D

Explanation:
Before requesting a Cortex XSOAR proof of value (POV) evaluation, it's important to gather a list of the different integrations that will need to be configured. This ensures that the POV can be tailored to the customer's environment and use cases, and allows the evaluation to be based on real-world data and workflows.

NEW QUESTION # 148

How does an "inline" auto-extract task affect playbook execution?

- A. Doesn't wait until the indicators are enriched and continues executing the next step
- B. Wait until the indicators are enriched and populate context data before executing the next step.
- C. Doesn't wait until the indicators are enriched but populate context data before executing the next

- D. step. Wait until the indicators are enriched but doesn't populate context data before executing the next step.

Answer: B
