

Sie können so einfach wie möglich - IdentityIQ-Associate bestehen!

Fokus:Menschlichkeit

Wer ist eigentlich...?

Stiftung Gute Tat

„Jeder kann helfen“- Ziel ist es, soziales Engagement durch Vermittlung von Freiwilligen, Beratung und Corporate Volunteering so einfach wie möglich zu machen.

Kein Wunder, dass die Schulungsunterlagen zur SailPoint IdentityIQ-Associate Prüfungs von PrüfungFrage von der Mehrheit der Kandidaten gelobt werden. Das zeigt, dass unsere Schulungsunterlagen doch zuverlässig sind und den Kandidaten tatsächlich Hilfe leisten können. Die Kandidaten sind in der Lage, die IdentityIQ-Associate Prüfung unbesorgt zu bestehen. Im Vergleich zu anderen Websites ist PrüfungFrage immer noch der Best-Seller auf dem Markt. Unter den Kunden hat der PrüfungFrage einen guten Ruf und wird von vielen anerkannt. Wenn Sie an der SailPoint IdentityIQ-Associate Prüfung teilnehmen wollen, klicken Sie doch schnell PrüfungFrage. Ich glaube, Sie werden sicher was bekommen, was Sie wollen. Sonst würden Sie sicher bereuen. Wenn Sie ein professionelle IT-Experte werden wollen, dann fügen Sie es schnell in den Warenkorb hinzu.

SailPoint IdentityIQ-Associate Prüfungsplan:

Thema	Einzelheiten
Thema 1	• User-Driven Requests: Explains how users submit access requests, what request types are available, and how QuickLink Populations control who can request what for whom.
Thema 2	• Foundational Concepts: Covers the core purpose of identity security, key IdentityIQ terminology, system components, and how rules, tasks, workflows, and business modeling fit into the platform.
Thema 3	• Access Modeling: Covers how entitlements and roles are defined, cataloged, and assigned to identities within IdentityIQ.
Thema 4	• Provisioning: Covers how IdentityIQ provisions access, including triggering actions, provisioning policies, Lifecycle Events, and attribute synchronization.

Thema 5	• Applications: Focuses on how applications and connectors are configured in IdentityIQ, including schemas, correlation, aggregation tasks, and resolving uncorrelated accounts.
Thema 6	• Governance: Addresses how access certifications are conducted and how policy violations are defined and detected across the organization.

Mit der Entwicklung der IT-Industrie nimmt die Zahl der IT-Lerner seit Jahren immer zu. Das führt zu immer stärkeren Konkurrenzen. Und es ist undenkbar, dass Sie in IT-Industrie von anderen überschritten sind. Deshalb sollen Sie Ihre Fähigkeit ständig erhöhen und Ihre Stärke zu anderen beweisen. Wie können Sie Ihre Fähigkeit zu anderen beweisen? Immer mehr Leute wählen IT-Zertifizierungen, Ihre Fähigkeit zu beweisen. Wollen Sie auch? Kommen Sie zuerst zu SailPoint IdentityIQ-Associate Zertifizierungsprüfung. Das ist die wichtigste SailPoint Prüfung und auch von vielen Unternehmen anerkannt.

SailPoint Certified IdentityIQ Associate Exam IdentityIQ-Associate Prüfungsfragen mit Lösungen (Q27-Q32):

27. Frage

Is this statement true about group factories and/or populations?

Groups and populations are used to target operations to only a specific set of identities.

- A. Yes
- B. No

Antwort: A

Begründung:

The statement is true. In SailPoint IdentityIQ, groups and populations are identity-segmentation mechanisms used to define sets of identities that share specific characteristics. A population is typically a saved collection of identities based on search criteria or defined membership logic. A group factory can dynamically generate identity groups based on identity attributes, such as department, location, cost center, job title, or business unit.

These constructs are useful because many IdentityIQ operations should not apply to the entire identity population. They allow administrators to scope or target actions to the relevant identities only. For example, populations and groups can support targeted reporting, focused analysis, certification scoping, and other governance activities where only a defined subset of identities should be included. This improves accuracy, reduces review noise, and aligns governance activity with business structure.

They should not be confused with ownership objects such as workgroups. Their primary purpose is identity grouping and operational targeting, not shared ownership accountability.

Reference topics: Identity Modeling - groups and populations; Governance - certification targeting and reporting scope; Foundational Concepts - business modeling and identity segmentation.

28. Frage

Is this a purpose of identity governance and administration (IGA)?

Recording which data a user downloads

- A. No
- B. Yes

Antwort: A

Begründung:

Recording which data a user downloads is not a core purpose of Identity Governance and Administration in SailPoint IdentityIQ. IGA is concerned with governing identities, accounts, access, entitlements, roles, policy violations, certifications, access requests, and provisioning. Its central objective is to answer questions such as who a user is, what access they have, whether that access is

appropriate, who approved it, and whether access complies with defined business and security policies.

Tracking the specific files, records, or data objects downloaded by a user is typically associated with data activity monitoring, data loss prevention, security information and event management, or user behavior analytics. IdentityIQ may integrate with other systems and can govern access to applications or repositories that contain sensitive data, but it does not primarily function as a tool for recording every data download event.

In IdentityIQ terms, the governance focus is identity security: access visibility, access certification, policy enforcement, role modeling, lifecycle management, and provisioning controls. Reference topics: Foundational Concepts, purpose of identity security, common IdentityIQ terms, governance model, certifications, policies, and provisioning.

29. Frage

Is this an accurate statement about the selection of a connector as part of an application definition?

Hostname is a required connectivity setting, regardless of the connector type selected.

- A. No
- B. Yes

Antwort: A

Begründung:

The statement is false. In SailPoint IdentityIQ, connectivity settings are determined by the connector selected for the application definition. An application represents an authoritative source, target system, or managed resource, and the connector defines how IdentityIQ communicates with that system. Because different connectors use different communication models, their required configuration fields are not universal.

For example, an LDAP or Active Directory connector commonly requires server connection details such as host, port, credentials, and search base configuration. A JDBC-based connector may require a JDBC URL, driver class, database credentials, and SQL-related configuration. A delimited file connector does not require a hostname because it reads account and entitlement data from a file location rather than connecting to a network service. Similarly, cloud or API-based connectors may require endpoint URLs, tokens, client credentials, or tenant-specific settings instead of a simple hostname field.

Therefore, hostname cannot be considered a required connectivity setting for every connector type. Required settings are connector-dependent and appear according to the selected connector's configuration model.

Reference topics: Applications, connector selection, application definition, connector-dependent settings, schema configuration, and aggregation prerequisites.

30. Frage

Is this statement about uncorrelated accounts true?

If an application's correlation logic has changed, the aggregation task can change account correlations to match the new logic.

- A. Yes
- B. No

Antwort: A

Begründung:

The statement is true. In SailPoint IdentityIQ, account correlation is the process used to associate an application account, represented as a Link, with the appropriate IdentityCube. Correlation logic is configured on the application and may use account attributes, identity attributes, or correlation rules to determine ownership. When that logic is changed, a subsequent account aggregation can evaluate account data against the updated correlation configuration and adjust account-to-identity associations where the aggregation process is configured to perform correlation.

This is important when accounts were previously uncorrelated, incorrectly correlated, or correlated under outdated matching criteria. For example, if an application originally correlated accounts by user name but is later changed to correlate by employee ID, aggregation can apply the new logic so that accounts align with the correct identities. Manual correlation is therefore not the only remediation path; proper correlation configuration followed by aggregation is a standard way to resolve or correct account ownership.

The behavior depends on the aggregation and correlation configuration, but the principle is accurate:

aggregation can apply changed correlation logic to account correlations. Reference topics: Applications, correlation options, account aggregation, uncorrelated account resolution, Link-to-IdentityCube association, and Identity Modeling

31. Frage

Is this a purpose of identity governance and administration (IGA)?
Detecting and addressing inappropriate access

- A. Yes
- B. No

Antwort: A

Begründung:

Detecting and addressing inappropriate access is a core purpose of Identity Governance and Administration in SailPoint IdentityIQ. IdentityIQ is designed to provide visibility into who has access, what access they have, how that access was obtained, whether it is appropriate, and what corrective action should occur when access violates business or security policy. Inappropriate access may be identified through access certifications, policy violations, role analysis, entitlement review, account aggregation, and identity correlation.

IdentityIQ supports this purpose by building IdentityCubes that consolidate identity, account, entitlement, role, and manager data from connected applications. Once access is visible, governance controls such as certifications allow managers, application owners, or entitlement owners to approve, revoke, or delegate access decisions. Policies can also detect toxic combinations, prohibited access, or access inconsistent with business rules. Remediation can then be routed through provisioning, work items, or manual fulfillment processes.

Therefore, the statement aligns directly with IGA and IdentityIQ's identity security model. Reference topic:

Foundational Concepts - purpose of identity security; also related to Governance - certifications, policy detection, and remediation.

32. Frage

.....

Es ist unnötig für Sie, viel Zeit an einer IdentityIQ-Associate Zertifizierungsprüfung zu verwenden. Wenn Sie es schwierig für die Vorbereitung der SailPoint IdentityIQ-Associate Prüfung finden und viel Zeit verschwenden müssen, sollen Sie am Besten PrüfungFrage IdentityIQ-Associate Dumps als Ihr Lerngerät benutzen, weil es kann viel Zeit für Sie sparen. Und es ist wichtiger, dass sie Ihnen versprechen, die SailPoint IdentityIQ-Associate Prüfung zu bestehen. Und es gibt keine anderen Unterlagen in dem Markt. Sie können viele andere interessante Dinge machen, statt die SailPoint IdentityIQ-Associate Prüfungen vorzubereiten. So, klicken Sie PrüfungFrage Webseite und Informieren Sie sich. Sie werden bereuen, diese Chance zu verlieren.
