## 有效的H13-624\_V5.5權威認證和資格考試的領導者和有口皆碑的H13-624\_V5.5: HCIP-Storage V5.5

我們Testpdf網站是個歷史悠久的Huawei的H13-624\_V5.5考試認證培訓資料網站。在認證IT行業已經有很久了，所以才有今天赫赫有名的地位及知名度，這都是幫助那些考生而得到的結果。我們的Huawei的H13-624\_V5.5考試認證

培訓資料包含試題及答案，這些資料是由我們資深的IT專家團隊通過自己的知識及不斷摸索的經驗而研究出來的，它的內容有包含真實的考試題，如果你要參加Huawei的H13-624\_V5.5考試認證，選擇Testpdf是無庸置疑的選擇。

## 最新的 HCIP-Storage H13-624\_V5.5 免費考試真題 (Q92-Q97):

### 問題 #92

In the Huawei backup solution, Server-Free backup networking involves snapshot technology, which component initiates the snapshot creation Build order.

- A. Media server
- B. Production storage
- C. Backup media
- **D. Backup proxy client**

答案： D

### 問題 #93

In the application scenario of sequential writing, for RAID10, the more single-select disks, the better.

- **A. False**
- B. True

答案： A

### 問題 #94

The network file sharing protocols supported by the NAS system mainly include: (multiple choice)

- A. FAT32
- **B. CIFS**
- **C. NFS**
- D. NTFS

答案： B,C

### 問題 #95

In Huawei all-flash storage, the SmartDedupe and SmartCompression features reduce redundant data space consumption and improve the transmission and storage efficiency of a storage system. Which of the following statements about the features is false?

- **A. During similarity-based deduplication in the background, the system does not divide data into blocks and can directly calculate similar fingerprints.**
- B. During inline deduplication, the system divides data into blocks and then calculates fingerprints for the blocks.
- C. Post-process compression means that data is first written to storage media and then read for compression.
- D. Backup storage supports deduplication and compression of file systems.

答案： A

### 解題說明:

SmartDedupe and SmartCompression are data reduction technologies in Huawei all-flash storage systems, such as OceanStor Dorado. The \*HCIP-Storage V5.5 Training Material (Module 2: Flash Storage Technologies)\* provides details:

- Option A: True. The material states: "Post-process compression involves writing data to storage media first, then reading it back for compression during idle periods."

- Option B: True. The material confirms: "Inline deduplication divides data into blocks and calculates fingerprints to identify duplicates before writing."

- Option C: False. The material clarifies: "Similarity-based deduplication, whether inline or background, requires dividing data into blocks to calculate fingerprints for similarity detection. Direct calculation without block division is not supported." This makes the statement incorrect.

- Option D: True. The material notes: "Backup storage supports deduplication and compression for file systems to optimize space usage." Thus, option C is false.

### 問題 #96

The OceanStor Pacific series storage systems support the \_\_\_\_\_ feature. This feature uses the classic token bucket algorithm to control the traffic upper limit. If local tokens are insufficient, tokens are continuously generated and added to the token bucket based on the OPS and bandwidth upper limit of the corresponding QoS control object as the rate.

答案:

解題說明:

Traffic shaping

Explanation:

This question pertains to Quality of Service (QoS) features in Huawei OceanStor Pacific series storage systems. The \*HCIP-Storage V5.5 Training Material (Module 3: Scale-Out Storage Technologies)\* describes: "The OceanStor Pacific series supports the traffic shaping feature, which uses the classic token bucket algorithm to control the upper limit of traffic. When tokens in the bucket are insufficient, the system generates and adds tokens based on the operations per second (OPS) and bandwidth limits defined for the QoS control object." Traffic shaping regulates data flow to prevent network congestion and ensure fair resource allocation, making it the correct feature name for this description.
