Splunk SPLK-1002 (Splunk Core Certified Power User) Exam is a certification test designed to evaluate the skills and abilities of professionals who use Splunk software to extract valuable insights and analyze data. It is an advanced level exam that is intended for individuals who have significant experience with Splunk Core and are looking to enhance their knowledge and expertise in the field. SPLK-1002 Exam is designed to assess the candidate's technical skills, analytical abilities, and problem-solving capabilities.

Splunk Core Certified Power User Exam Sample Questions (Q151-Q156):

NEW QUESTION # 151

Which of the following statements describe GET workflow actions?

- A. GET workflow actions can be configured to open the URL link in the current window or in a new window
- B. GET workflow actions must be configured with POST arguments.
- C. Label names for GET workflow actions must include a field name surrounded by dollar signs.
- D. Configuration of GET workflow actions includes choosing a sourcetype.

Answer: A

Explanation:

GET workflow actions are custom actions that open a URL link when you click on a field value in your search results. GET workflow actions can be configured with various options, such as label name, base URL, URI parameters, app context, etc. One of the options is to choose whether to open the URL link in the current window or in a new window. GET workflow actions do not have to be configured with POST arguments, as they use GET method to send requests to web servers. Configuration of GET workflow actions does not include choosing a sourcetype, as they do not generate any data in Splunk. Label names for GET workflow actions must include a field name surrounded by dollar signs, as this indicates the field value that will be used to replace the variable in the URL link.

NEW QUESTION # 152

Which of the following searches would return a report of sales by product-name?

- A. chart sum(price) as sales by product_name
- B. stats sum(price) as sales over product_name
- C. timechart list(sales), values(product_name)
- D. chart sales by product_name

Answer: B

Explanation:

NEW QUESTION # 153

Which of the following statements describes macros?

- A. A macro is a reusable search string that must have a fixed time range.
- B. A macro is a reusable search string that must contain the full search.
- C. A macro is a reusable search string that must contain only a portion of the search.
- D. A macro is a reusable search string that may have a flexible time range.

Answer: D

Explanation:

Reference: <https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/Definearchmacros> A macro is a reusable search string that can contain any part of a search, such as search terms, commands, arguments, etc. A macro can have a flexible time range that can be specified when the macro is executed. A macro can also have arguments that can be passed to the macro when it is executed. A macro can be created by using the Settings menu or by editing the macros.conf file. A macro does not have to contain the full search, but only the part that needs to be reused. A macro does not have to have a fixed time range, but can use a relative or absolute time range modifier. A macro does not have to contain only a portion of the search, but can contain multiple parts of the search.

NEW QUESTION # 154

Which method in the Field Extractor would extract the port number from the following event? |

10/20/2022 - 125.24.20.1 ++++ port 54 - user: admin <web error>

- A. Regular expression
- B. The Field Extractor tool cannot extract regular expressions.
- C. Delimiter
- **D. rex command**

Answer: D

Explanation:

Explanation

The rex command allows you to extract fields from events using regular expressions. You can use the rex command to specify a named group that matches the port number in the event. For example:

rex "\+\\+\\+port (?<port>\\d+)"

This will create a field called port with the value 54 for the event.

The delimiter method is not suitable for this event because there is no consistent delimiter between the fields.

The regular expression method is not a valid option for the Field Extractor tool. The Field Extractor tool can extract regular expressions, but it is not a method by itself.
