Juniper JN0-224 Certification Study Guide with Practice Questions

Build DevOps Confidence with Exam Style Questions and Smart Prep Strategy

www.NWExam.com

The Juniper JN0-224 JNCIA-DevOps Study Guide is a structured preparation resource designed to help candidates pass the Automation and DevOps Associate certification exam. This guide provides a clear overview of the exam format, scoring structure, registration process, and effective preparation strategies.

Inside this PDF, you will find carefully crafted practice questions that reflect real exam scenarios and strengthen your understanding of automation concepts within Junos environments. Designed for IT professionals pursuing DevOps and network automation skills, this guide supports focused preparation and builds confidence for the JN0-224 certification exam.

What's more, part of that SureTorrent JN0-224 dumps now are free: <https://drive.google.com/open?id=1i9eB31WGniUFkWgAVNrF6J7p3xHzOdKZ>

If you are boring about daily life and want to improve yourself, getting a practical Juniper certification will be a nice choice that will improve your promotion advantages. JN0-224 exam study guide will be valid helper which will help you clear exams 100% for sure. Thousands of candidates successfully pass exams and get certifications you desire under the help of our SureTorrent's JN0-224 Dumps PDF files.

Juniper JN0-224 Exam Syllabus Topics:

Section	Weight	Objectives
Junos REST API	15%	- cURL and HTTP methods - REST API fundamentals - REST API Explorer tool
Python and PyEZ	30%	- Error handling and automation scripts - PyEZ library installation and usage - RPC execution and configuration management - Python programming basics - Jinja2 templates and JSNAPy
Junos Automation Stack and DevOps Concepts	20%	- Automation frameworks and tools - Junos automation architecture - Configuration management and version control - DevOps principles and culture

NETCONF and XML API	20%	- XML concepts, syntax and XPath - XML API usage and interaction - NETCONF protocol operations and capabilities
Data Serialization	15%	- JSON structure and usage - Data modeling and representation - YAML structure and usage

Pass Guaranteed Quiz 2026 Juniper Updated Practice JN0-224 Exam

If you are having the same challenging problem, don't worry; Juniper is here to help. Our direct and dependable Juniper Treasury with Automation and DevOps, Associate (JNCIA-DevOps) Exam Questions in three formats will surely help you pass the Juniper Treasury with JN0-224 certification exam. Because this is a defining moment in your career, do not undervalue the importance of our Treasury with Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam dumps. Profit from the opportunity to get these top-notch exam questions for the JN0-224 certification test.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q30-Q35):

NEW QUESTION # 30

You are asked to write an on-box script that will be triggered when a specific interface on a Junos device goes down. Which type of on-box script should you use to accomplish this task?

- A. operation
- **B. event**
- C. SNMP
- D. commit

Answer: B

Explanation:

An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.

Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.

Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.

Supporting Reference:

Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

NEW QUESTION # 31

What is the default port for NETCONF connections over SSH?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/netconf/topics/topic-map/netconf-ssh-connection.html> The IANA-assigned port for NETCONF-over-SSH sessions is 830.

NEW QUESTION # 32

Exhibit.

```
...
rest {
  http {
    port 3000;
  }
  traceoptions {
    flag all;
  }
  enable-explorer;
}
...
web-management {
  http;
  https {
    system-generated-certificate;
  }
}
...

user@router> show configuration interfaces
ge-0/0/0 {
  unit 0 {
    family inet6 {
      address 2001:db8:0:1::/64;
    }
  }
}
```

You have the configuration shown in the exhibit, but are unable to access the REST API Explorer. Which configuration is necessary to solve this problem?

- A. Configure an IPv4 address on ge-0/0/0 0.
- **B. Configure a secondary IPv6 address on ge-0/0/0.0.**
- C. Configure a firewall filter to explicitly permit SSH.
- D. Configure the rest service to be active on port 80.

Answer: B

NEW QUESTION # 33

Which type of on-box automation script is designed to run every time a user executes a configuration change?

- A. operation
- B. event
- **C. commit**
- D. SNMP

Answer: C

Explanation:

In Junos OS, a commit script is an on-box automation script that runs every time a configuration change is committed. Commit scripts are used to enforce configuration policies, validate configuration changes, or make automatic adjustments to configurations when certain conditions are met.

Commit Script (C): Executes automatically during the commit process, ensuring that the new configuration adheres to specific rules or conventions before it is applied to the system.

Event, SNMP, and operation scripts are used for other purposes in Junos automation but do not run automatically with every configuration change.

Reference:

Junos OS Automation Scripts Guide: Provides details on different types of scripts, including commit scripts, and their use cases.

Juniper Networks Documentation: Offers examples and best practices for creating and using commit scripts.

NEW QUESTION # 34

Which statement about the NETCONF content layer is true?

- A. It uses XML for RPC request and response payloads.
- B. It uses JSON for RPC request and response payloads.
- C. It uses YAML for RPC request and response payloads.
- D. It uses HTML for RPC request and response payloads.

Answer: A

Explanation:

The NETCONF protocol, used for network management, utilizes XML for encoding the RPC (Remote Procedure Call) requests and responses. XML is chosen because of its flexibility and ability to represent hierarchical data structures, making it well-suited for representing network configurations and states.

Option B is correct because XML is the standard format used for NETCONF RPC payloads.

Options A (YAML), C (JSON), and D (HTML) are incorrect because these formats are not used by NETCONF for its RPC payloads.

Supporting Reference:

RFC 6241 - NETCONF Protocol: This RFC describes the use of XML for encoding NETCONF messages.

NEW QUESTION # 35

.....

Our website gives detailed guidance to our customers for preparation of JN0-224 actual test and take them towards the direction of achievement. Each of our Juniper exam preparation materials is designed by IT professionals in order to improve your particular skills. Our JN0-224 Practice Questions will boost the confidence of candidates for appearing in the real exam.
