Pass Guaranteed Quiz Fortinet - EMEA-Advanced-Support - Fortinet EMEA Advanced Support Exam Fantastic Dumps Free Download

Everyone wishes to spend their career at one level. Obtaining a Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support certificate is the reason that many people join the Fortinet EMEA-Advanced-Support exam. They can be sure of earning promotions and higher pay at their current job with this credential. While attempting career growth is crucial, you can only do so after clearing the Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support Exam.

Fortinet EMEA Advanced Support Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which FortiGate log type records denied traffic events?

- A. Security Log
- **B. Traffic Log**
- C. System Log
- D. Event Log

Answer: B

Explanation:

Traffic Logs in FortiGate record all traffic events, including denied packets, with details like source, destination, and policy ID. Security Logs (B) cover UTM events, Event Logs (C) system events, and System Logs (D) hardware or system status, not specifically denied traffic. Exact extract: "Traffic Logs record all packet activity, including allowed and denied traffic, with details such as source/destination IPs, ports, and the firewall policy applied."

NEW QUESTION # 26

How does a stateful firewall control a TCP session?

- A. TCP sequence numbers and TCP flags are used to control the session
- B. TCP ack numbers are used to control the session
- C. TCP source ports are used to control the session
- D. TCP destination ports are used to control the session

Answer: A

Explanation:

A stateful firewall, like FortiGate, tracks TCP sessions by maintaining a state table that includes TCP sequence numbers and flags (e.g., SYN, ACK, FIN) to monitor the connection's lifecycle (establishment, data transfer, termination). This ensures proper session handling, detecting out-of-order packets or invalid states.

Source and destination ports identify the session but don't control its state, and ACK numbers alone are insufficient. Exact extract: "Stateful inspection tracks TCP sessions using sequence numbers and TCP flags (SYN, ACK, FIN, etc.) to ensure packets are valid and part of an established session... FortiGate maintains a state table to monitor the TCP connection states."

NEW QUESTION # 27

Which of the following is a benefit of using FortiGate's Security Fabric?

- A. It automatically configures VLANs on FortiSwitches
- B. It reduces the need for firewall policies
- C. It enables centralized management of multiple Fortinet devices
- D. It increases the speed of IPsec VPN tunnels

Answer: C

Explanation:

The Fortinet Security Fabric provides a centralized management platform for multiple Fortinet devices (e.g., FortiGate, FortiSwitch, FortiAP), enabling coordinated security policies, telemetry sharing, and simplified administration. It does not directly speed up VPNs (B), reduce firewall policies (C), or auto-configure VLANs (D). Exact extract: "The Fortinet Security Fabric enables centralized management and visibility across Fortinet devices, allowing coordinated security policies and telemetry sharing for enhanced protection."

NEW QUESTION # 28

What is the default FortiGate behavior when a packet matches no firewall policy?

- A. The packet is dropped
- B. The packet is forwarded to the default gateway
- C. The packet is logged and allowed
- D. The packet is sent to the IPS engine

Answer: A

Explanation:

FortiGate operates on a default-deny principle; if a packet does not match any firewall policy, it is dropped to ensure security. No forwarding (A), IPS processing (C), or automatic allowing (D) occurs without a matching policy. Exact extract: "FortiGate uses a default-deny approach; packets that do not match any configured firewall policy are dropped to prevent unauthorized traffic."

NEW QUESTION # 29

What is the role of the FortiGate 'set srcintf' command in a firewall policy?

- A. Configures the source NAT interface
- B. Defines the destination interface for traffic
- C. Sets the source IP address range
- D. Specifies the source interface for traffic matching

Answer: D

Explanation:

The 'set srcintf' command in a FortiGate firewall policy specifies the source interface from which traffic originates, helping define the policy's scope. It does not set the destination interface (B), source IP range (C), or NAT interface (D). Exact extract: 'The 'set srcintf' command in a firewall policy specifies the source interface for incoming traffic, allowing FortiGate to match packets based on their entry interface.'

NEW QUESTION # 30

.....

The Itcertking offers desktop Fortinet EMEA-Advanced-Support Practice Exam software for students to practice for the EMEA-Advanced-Support exam. This software mimics the actual Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam and tracks the student's progress, records grades, and compares results. Available for Windows computers, it requires an internet connection only for license validation.
