## EMT Latest Test Simulations - Training EMT Pdf

Keep reading because we have discussed specifications of Emergency Medical Technicians Exam EMT PDF format, desktop Emergency Medical Technicians Exam EMT practice exam software, and Emergency Medical Technicians Exam EMT web-based practice test. ITPassLeader is aware that many EMT exam applicants can't sit in front of a computer for many hours to study for the EMT examination. If you are one of those Emergency Medical Technicians Exam EMT exam candidates, don't worry because we have a portable file of NREMT Emergency Medical Technicians Exam PDF Questions for you. Emergency Medical Technicians Exam EMT PDF format works smoothly on all smart devices.

### NREMT Emergency Medical Technicians Exam Sample Questions (Q21-Q26):

#### NEW QUESTION # 21

During a mass casualty incident, a patient has an open tibia and fibula deformity. Using START triage, in which of the following priorities should the EMT place the patient?

- A. Minimal
- B. Immediate
- C. Delayed
- D. Emergent

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The START (Simple Triage and Rapid Treatment) system classifies patients based on ability to walk, respirations, perfusion, and mental status. A patient with an open fracture who can breathe adequately, has a pulse, and follows commands is categorized as "Delayed".

Immediate (Red) is reserved for those who cannot walk and have life-threatening conditions, such as compromised airway or severe bleeding.

#### NEW QUESTION # 22

Heat exhaustion is most frequently associated with

- A. Bradycardia
- B. Hypovolemia
- C. Hypertension
- D. Altered mental status

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Heat exhaustion results from prolonged exposure to elevated temperatures, leading to fluid and electrolyte loss (especially sodium and water), causing hypovolemia. This can result in:

- \* Tachycardia
- \* Weakness
- \* Dizziness
- \* Profuse sweating

Unlike heat stroke, mental status is typically preserved in heat exhaustion. Hypertension and bradycardia are not characteristic.

### NEW QUESTION # 23

A 19-year-old patient has received multiple stab wounds. The patient is unresponsive. The vital signs are BP 82/60, P 116, R 28, and SpO<sub>2</sub> 86%. Which substance would the EMT expect to increase in the patient's body?

- A. Lactic acid
- B. Carbon dioxide
- C. Sodium bicarbonate
- D. Water

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The patient is in hypoperfusion (shock) from blood loss. In shock states, tissues are deprived of oxygen, leading to anaerobic metabolism, which produces lactic acid as a byproduct. This causes metabolic acidosis, which is a critical sign of systemic oxygen debt.

Carbon dioxide rises with respiratory failure, but lactic acid is a more specific indicator of cellular hypoxia.

### NEW QUESTION # 24

When using the SALT method for triage, which of the following interventions should the EMT perform during the individual assessment step?

- A. Completing first responder scorecards to track patients
- B. Bleeding control, opening the airway, and administering two rescue breaths for pediatric patients
- C. Insertion of airway adjuncts, bleeding control, and moving patients to the triage area
- D. Assessing respirations, administering two rescue breaths, and assessing patient mentation

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SALT(Sort, Assess, Lifesaving interventions, Treatment/Transport) is a mass casualty triage method recommended by the CDC and the National Association of EMS Physicians (NAEMSP). During the

"Assess" step, responders:

\* Check respirations

\* Provide lifesaving interventions such as rescue breaths if the patient is not breathing but has a pulse

\* Evaluate mentation (e.g., ability to follow commands)

Airway adjuncts and full transport do not happen at this stage. Scorecards and pediatric-specific modifications are addressed later in the protocol.

### NEW QUESTION # 25

An 84-year-old patient has a sudden onset of weakness to one side of the body. The patient has a history of hypertension and high cholesterol. The vital signs are BP 176/94 mmHg, P 108/min, R 18/min, and SpO<sub>2</sub> 97% on room air. For which of the following additional symptoms should the EMT assess? Select the three correct options.

- A. Tremors
- B. Miosis
- C. Syncopal episodes
- D. Slurred speech
- E. Arm drift
- F. Facial droop

**Answer: D,E,F**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The symptoms described are classic for a stroke (CVA). Additional hallmark findings include:

- \* Arm drift (motor weakness or hemiparesis)
- \* Facial droop (Cranial nerve VII involvement)
- \* Slurred speech (dysarthria or aphasia)

These form the basis of prehospital stroke assessment tools like FAST:

- \* Face drooping
- \* Arm weakness
- \* Speech difficulty
- \* Time to call 911

Miosis (pupil constriction) and tremors are not associated with stroke in EMS context. Syncope is an isolated event and not a reliable CVA symptom.
