ADA-C02 Real Questions | Reliable ADA-C02 Exam Book

Having a good command of professional knowledge in this line, they devised our high quality and high effective ADA-C02 study materials by unremitting effort and studious research. They are meritorious and unsuspecting experts with professional background. By concluding quintessential points into ADA-C02 Preparation engine, you can pass the exam with the least time while huge progress. And our pass rate of the ADA-C02 exam questions is high as 98% to 100%.

Snowflake SnowPro Advanced Administrator ADA-C02 Sample Questions (Q15-Q20):

NEW QUESTION # 15

DatabaseA has a single schema called Schema1. This schema contains many tables and views. The ANALYST role has privileges to select from all objects in DatabaseA.Schema1. The SYSADMIN role clones DatabaseA to DatabaseA_clone.

What privileges does the ANALYST role have on tables and views in DatabaseA_clone? (Choose two.)

- A. USAGE on the database DatabaseA_clone.Schema1
- B. SELECT on all tables, and only non-secure views in DatabaseA_clone.Schema1
- C. SELECT on all tables, and only secure views in DatabaseA_clone.Schema1
- D. SELECT on all tables and views in DatabaseA_clone.Schema1
- E. USAGE on the schema DatabaseA_clone

Answer: D,E

Explanation:

When a database is cloned, the privileges granted on objects within the source database are preserved in the cloned database. Roles that had privileges on objects such as tables and views continue to have those privileges on the corresponding cloned objects. Therefore, the ANALYST role retains SELECT privileges on all tables and views within the cloned schema.

In addition, the cloned database and schema inherit the same access control configuration, allowing the role to use the schema within the cloned database.

NEW QUESTION # 16

A Snowflake Administrator needs to persist all virtual warehouse configurations for auditing and backups. Given a table already exists with the following schema:

Table Name: VWH_META

Column 1: SNAPSHOT_TIME TIMESTAMP_NTZ

Column 2: CONFIG VARIANT

Which commands should be executed to persist the warehouse data at the time of execution in JSON format in the table VWH_META?

- A. SHOW WAREHOUSES;
INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP(),
FROM TABLE(RERESULT_SCAN(LAST_QUERY_ID(1)));
- B. SHOW WAREHOUSES;
INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP(), *
FROM TABLE(RERESULT_SCAN(SELECT LAST_QUERY_ID(-1)));
- C. SHOW WAREHOUSES;
INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP(), *
FROM TABLE(RERESULT_SCAN(LAST_QUERY_ID()));
- **D. SHOW WAREHOUSES;
INSERT INTO VWH_META
SELECT CURRENT_TIMESTAMP(),
OBJECT_CONSTRUCT(*)
FROM TABLE(RERESULT_SCAN(LAST_QUERY_ID()));**

Answer: D

Explanation:

To persist warehouse configurations in JSON format, the result set from SHOW WAREHOUSES must be captured and converted into a variant object. Using OBJECT_CONSTRUCT(*) with RESULT_SCAN(LAST_QUERY_ID()) stores the full warehouse configuration snapshot as JSON in the CONFIG VARIANT column, along with the timestamp.

NEW QUESTION # 17

What are characteristics of data replication in Snowflake? (Choose three.)

- A. Users must be granted REPLICATIONADMIN privileges in order to enable replication.
- B. Replication can only occur within the same cloud provider.
- C. Users can have unlimited primary databases and they can be replicated to an unlimited number of accounts if all accounts are within the same organization.
- **D. Databases created from shares can be replicated.**
- **E. The ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command must be issued from the primary account.**
- **F. To start replication run the ALTER DATABASE ... REFRESH command on the account where the secondary database resides.**

Answer: D,E,F

Explanation:

Replication must be enabled on the primary account using ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS.

To refresh replicated data, ALTER DATABASE ... REFRESH is executed on the secondary database.

Databases created from shares can also be replicated.

NEW QUESTION # 18

Which commands can be performed by a user with the ORGADMIN role but not the ACCOUNTADMIN role? (Choose two.)

- A. SELECT
SYSTEM\$GLOBAL_ACCOUNT_SET_PARAMETER('ACCOUNT_LOCATOR','ENABLE_ACCOUNT_DATABASE_REPLICATION','true');
- **B. SHOW ORGANIZATION ACCOUNTS;**
- C. GRANT ROLE ORGADMIN TO USER <username>;
- **D. SHOW REGIONS;**
- E. SHOW USERS;

Answer: B,D

Explanation:

Only the ORGADMIN role can run SHOW REGIONS and SHOW ORGANIZATION ACCOUNTS, which provide organization-wide information. These commands are not available to the ACCOUNTADMIN role.

NEW QUESTION # 19

The following SQL command was executed:

```
Use role SECURITYADMIN;
```

```
Grant ownership
```

```
On future tables
```

```
In schema PROD.WORKING
```

```
To role PROD_WORKING_OWNER;
```

```
Grant role PROD_WORKING_OWNER to role SYSADMIN;
```

```
Use role ACCOUNTADMIN;
```

```
Create table PROD.WORKING.XYZ (value number);
```

Which role(s) can alter or drop table XYZ?

- A. Only the PROD_WORKING_OWNER role can alter or drop table XYZ.
- B. PROD_WORKING_OWNER, ACCOUNTADMIN, and SYSADMIN can alter or drop table XYZ.
- C. SECURITYADMIN, SYSADMIN, and ACCOUNTADMIN can alter or drop table XYZ.
- D. Because ACCOUNTADMIN created the table, only the ACCOUNTADMIN role can alter or drop table XYZ.

Answer: B

Explanation:

Although ACCOUNTADMIN created the table, the future ownership grant ensures ownership of new tables in PROD.WORKING is assigned to PROD_WORKING_OWNER. Since PROD_WORKING_OWNER was granted to SYSADMIN, both roles, along with ACCOUNTADMIN (which always has ultimate rights), can alter or drop the table XYZ.

NEW QUESTION # 20

.....

All our team of experts and service staff are waiting for your mail on the ADA-C02 exam questions all the time. As long as you encounter obstacles in the learning process on our ADA-C02 training guide, send us an email and we will solve it for you at the first time. Please believe that ADA-C02 Learning Materials will be your strongest backing from the time you buy our ADA-C02 practice braindumps to the day you pass the exam.
