

Valid CEDP Exam Tips, Test CEDP Cram

CEDP - Certified Emergency Disaster Professional Practice Exam With Correct Solutions.

What agency would help disaster victims replace their U.S. Savings Bonds lost in a Disaster? - Answer Bureau of Public Debt

What aspects of emergency management would reduce hazard risk the most? - Answer Mitigation

Disaster mass evacuation is identified/addressed in which of the following documents? - Answer NRF

International financial institutions are reluctant to fund what emergency management phase? - Answer Response

What statement describes the philosophy shift that contributed to U.S. transition from a National Response Plan to a National Response Framework? - Answer Need for a more unified national response effort from all government levels

During a disaster, which response indicates a topic not falling under the objectives of Protection of Natural and Cultural Resources and Historic Properties? - Answer Assessment of privately constructed dams

What is not a level of emergency planning as defined by FEMA? - Answer Contingency

What statement best describes "Situational Awareness" - Answer Integrating information from several sources for making decisions

What statement about carbon monoxide is accurate? - Answer Exposure can inhibit the blood from carrying oxygen to the brain

What publication provides guidelines for developing an EOP? - Answer CPG 101

What entity provides current hazardous material information to emergency personnel responding to a highway transportation accident with a chemical release? - Answer Chemical Transportation Emergency Center

What does the DHS Secretary use for guide development of standards, guidelines, and compliance protocols for determining state or local government compliance with NIMS? - Answer National Response Framework

What agency provides communication support to the healthcare sector during a major disaster? - Answer Federal Communications Commission

What action would be a key to success for conducting a planning session? - Answer Ensuring the group process functions efficiently and effectively

There are more and more people to try their best to pass the CEDP exam, including many college students, a lot of workers, and even many housewives and so on. These people who want to pass the CEDP exam have regard the exam as the only one chance to improve themselves and make enormous progress. So they hope that they can be devoting all of their time to preparing for the CEDP Exam, but it is very obvious that a lot of people have not enough time to prepare for the important CEDP exam. Our CEDP exam questions can help you pass the CEDP exam with least time and energy.

The DumpsKing experts regularly add these changes in the DumpsKing CEDP exam dumps questions so that you do not miss a single CEDP exam update. With the purchasing of DumpsKing CEDP exam practice questions you get an opportunity to get free DumpsKing CEDP Exam Dumps questions updates for up to 1 year from the date of DumpsKing CEDP exam questions purchase.

>> [Valid CEDP Exam Tips](#) <<

Maximize Your Chances of Getting CEDP

People who get CEDP certification show dedication and willingness to work hard, also can get more opportunities in job hunting. It seems that CEDP certification becomes one important certification for many IT candidates. While a good study material will do great help in CEDP Exam Preparation. DumpsKing CEDP will solve your problem and bring light for you. CEDP exam questions and answers are the best valid with high hit rate, which is the best learning guide for your IBFCSM CEDP preparation.

IBFCSM Certified Emergency and Disaster Professional Sample Questions

(Q10-Q15):

NEW QUESTION # 10

What defines the respirator concept of Assigned Protection Factor?

- A. Level of protection afforded to an Individual correctly wearing a properly fitted device
- B. Level of protection deemed acceptable by NIOSH before approving a respiratory device
- C. Personal Illness factor determined by qualitatively evaluating respirator protection

Answer: A

Explanation:

The Assigned Protection Factor (APF) is an OSHA-defined metric (29 CFR 1910.134) that represents the workplace level of respiratory protection that a respirator or class of respirators is expected to provide to employees when the employer implements a continuing, effective respiratory protection program.

Specifically, it is the level of protection afforded to an individual correctly wearing a properly fitted device.

For example, an APF of 10 means that the respirator can protect the wearer against air contaminants that are up to 10 times the Permissible Exposure Limit (PEL). If a hazard's concentration is 50 times the PEL, a respirator with an APF of at least 50 (such as a full-facepiece air-purifying respirator) must be used. APFs range from 10 for simple half-mask respirators to 10,000 for positive-pressure self-contained breathing apparatus (SCBA).

In the CEDP and HAZWOPER context, the APF is the "safety multiplier" used to select the correct PPE.

Planners must understand that an APF is only valid if the respirator is "properly fitted" through annual fit testing and if the user is trained to wear it "correctly." If a user has facial hair that interferes with the seal, the APF essentially drops to zero, as the contaminated air will take the path of least resistance through the gaps in the seal. Option C is incorrect because while NIOSH approves the devices, OSHA assigns the protection factors used for regulatory compliance and field safety planning. Understanding APF is critical for ensuring that disaster responders are not under-protected when entering toxic atmospheres.

NEW QUESTION # 11

What infrastructure protection would EPA assume during a national disaster?

- A. Land management
- B. Food safety screening
- C. Water resource management

Answer: C

Explanation:

Under the National Response Framework (NRF) and Homeland Security Presidential Directive 7 (HSPD-7), the Environmental Protection Agency (EPA) is designated as the Sector-Specific Agency (SSA) for the Water and Wastewater Systems sector. During a national disaster, the EPA's primary infrastructure protection responsibility is Water Resource Management, which includes ensuring the safety, security, and resilience of the nation's drinking water and wastewater treatment facilities.

While the Department of Agriculture (USDA) and the FDA handle food safety (Option A), and the Department of the Interior typically manages federal lands (Option C), the EPA focuses on the technical and regulatory aspects of water infrastructure. In the event of a disaster—such as a major flood, hurricane, or a contamination event—the EPA works under Emergency Support Function #10 (ESF #10 - Oil and Hazardous Materials Response) and provides technical assistance to state and local authorities to restore water services.

This includes conducting water quality sampling, providing emergency water treatment equipment, and overseeing the repair of critical water infrastructure.

According to the CEDP curriculum, the EPA's role is critical because water is a "community lifeline." The failure of water infrastructure can lead to cascading failures in healthcare (hospital operations) and firefighting (hydrant pressure). Therefore, the EPA's infrastructure protection efforts are geared toward both prevention (mitigating cyber or physical threats to water plants) and rapid recovery (restoring potable water to an impacted population). This involves close coordination with the Water Information Sharing and Analysis Center (WaterISAC) to disseminate threat warnings and best practices for hardening water systems against both natural and man-made disasters.

NEW QUESTION # 12

EPA Worker Protection Standard (WPS) addresses what specific category of hazards?

- A. Hazardous wastes

- B. Airborne pollutants
- C. Pesticides

Answer: C

Explanation:

The EPA Worker Protection Standard (WPS) is a federal regulation specifically designed to reduce the risk of injury or illness resulting from exposure to pesticides. Issued under the authority of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), the WPS offers occupational protections to over two million agricultural workers and pesticide handlers who work on farms, in forests, nurseries, and greenhouses. It addresses both the acute health effects (such as skin irritation, respiratory distress, and poisoning) and the long-term chronic risks associated with handling or working in areas treated with agricultural pesticides.

The WPS mandates several key categories of protection:

- * Training: Employers must provide annual pesticide safety training to workers and handlers.
- * Notification: Workers must be informed of pesticide-treated areas to prevent inadvertent exposure.
- * Restricted-Entry Intervals (REI): Enforcing the specific time period during which entry into a treated area is prohibited.
- * Decontamination Supplies: Providing water, soap, and towels for routine washing and emergency eye/skin flushing.
- * Personal Protective Equipment (PPE): Ensuring that handlers are provided with the correct PPE—such as respirators, gloves, and chemical-resistant suits—as specified on the pesticide label.

For a Certified Emergency and Disaster Professional (CEDP) working in agricultural regions, understanding the WPS is essential for managing hazardous materials incidents in the field. When a disaster like a flood or tornado impacts a farm, stored pesticides can be released into the environment. Responders must be aware that any area under an active REI remains a hazard zone. By following the WPS, employers and emergency managers ensure that the agricultural workforce is not exposed to toxic levels of chemicals, fulfilling the EPA's mission of environmental and human health protection while maintaining the safety of the food supply chain.

NEW QUESTION # 13

What alternative describes the guiding philosophy of medical surge planning?

- A. Recognizing the need for outside support from state and federal resources
- B. Providing safe patient care in conventional, crisis, and transitional settings
- C. Encouraging the development of innovative solutions for resource limitations

Answer: B

Explanation:

The guiding philosophy of Medical Surge Planning, as outlined by the ASPR (Administration for Strategic Preparedness and Response) and the Hick et al. Framework, is centered on the ability to provide safe patient care across a spectrum of settings: conventional, contingency (transitional), and crisis. This philosophy acknowledges that during a mass casualty event or pandemic, a healthcare system cannot maintain "business as usual" standards of care for everyone, but it must have a plan to degrade its operations gracefully while maintaining the best possible outcomes for the greatest number of people.

* Conventional Care: Standard daily care using established clinical protocols.

* Contingency (Transitional) Care: Using functional equivalents (e.g., using a PACU as an ICU) while maintaining basically the same level of care.

* Crisis Care: When resources are so depleted that "Crisis Standards of Care" (CSC) are invoked, shifting the ethical focus from individual-centered care to population-based care to save the most lives possible.

While recognizing the need for outside support (Option A) is a logistical step, and innovation (Option C) is a beneficial byproduct, the philosophy is about the continuum of care. For a CEDP professional, medical surge planning involves defining the "triggers" that move a facility from one setting to the next. It requires planning for the "3 S's": Staff (personnel), Stuff (supplies/equipment), and Space (physical treatment areas). By planning for these three settings, hospitals ensure they do not "collapse" when their capacity is exceeded; instead, they transition into pre-planned alternative modes of operation that allow them to continue their life-saving mission under extreme stress.

NEW QUESTION # 14

What organization provides emergency planning information online at Ready Rating?

- A. National Fire Protection Agency
- B. American Red Cross
- C. Federal Emergency Management Agency

Answer: B

Explanation:

Ready Rating is a free, self-paced membership program designed by the American Red Cross to help businesses, schools, and organizations become better prepared for emergencies.⁸ While FEMA (Option A) operates the well-known "Ready.gov" website, the specific "Ready Rating" tool and its associated assessment dashboard are proprietary to the American Red Cross. This program provides a systematic way for organizations to evaluate their current level of preparedness and receive customized recommendations for improvement.

The Ready Rating system is based on a "123 Assessment" that measures an organization's performance across several key areas:

- * Commitment: Ensuring leadership is involved in the planning process.
- * Assessment: Identifying hazards and internal vulnerabilities.
- * Planning: Developing an Emergency Operations Plan (EOP).
- * Training: Conducting drills and employee safety education.

For a CEDP professional working in the private sector or for an NGO, Ready Rating is a valuable tool for building Business Continuity and Social Capital. It aligns with the Red Cross mission of disaster readiness by providing small to medium-sized entities—which may not have a full-time emergency manager—with professional-grade planning templates and hazard checklists. By using the Ready Rating score, an organization can benchmark its progress year-over-year and demonstrate its commitment to safety to stakeholders, employees, and insurers. This program exemplifies the "Whole Community" approach to preparedness by empowering non-governmental entities to take ownership of their own disaster resilience.
