Our company has worked on the 2V0-11.25 study material for more than 10 years, and we are also in the leading position in the industry, we are famous for the quality and honesty. The pass rate of our company is also highly known in the field. If you fail to pass it after buying the 2V0-11.25 Exam Dumps, money back will be guaranteed for your lost or you will get another free 2V0-11.25 exam dumps. Our company will ensure the fundamental interests of our customers.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 2	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.
Topic 3	<ul style="list-style-type: none"> • VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 4	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 5	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

Just choose the right DumpsKing 2V0-11.25 exam questions format demo and download it quickly. Download the DumpsKing 2V0-11.25 exam questions demo now and check the top features of 2V0-11.25 Exam Questions. If you think the 2V0-11.25 exam dumps can work for you then take your buying decision. Best of luck in exams and career!!!

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q159-Q164):

NEW QUESTION # 159

An administrator needs to ensure that all ESXi hosts in a cluster have a consistent configuration. Which three steps are necessary to achieve this? (Choose three.)

- A. Right-click the host profile from the reference host and select duplicate host profile.
- B. Attach the host profile to all hosts in the cluster.
- C. Manually configure each host to match the reference host settings.
- D. Configure the desired settings on an ESXi host.
- E. Detach the host profile from all hosts in the cluster.
- F. Extract the host profile from the configured reference host.

Answer: B,D,F

Explanation:

You extract a host profile from the reference host that has the desired configuration.

Before extraction, you configure the reference ESXi host with the settings you want standardized.

You attach the extracted host profile to all other hosts in the cluster to enforce a consistent configuration.

NEW QUESTION # 160

A cloud administrator recently deployed a new VI workload domain. As part of the initial VI domain creation, the administrator created a new SSO domain. However, they reconsidered and now want the domain to use the same SSO domain as the management domain.

How can the VI domain be changed from a dedicated SSO domain to sharing the SSO domain with the management domain?

- A. From the Management Domain vCenter Server instance, use the rsautl command to add the VI workload domain to the management domain SSO ring.
- B. From the SDDC Manager console, use the rsautl command to add the VI workload domain to the management domain SSO ring.
- C. From the VI Workload Domain vCenter Server instance, use the rsautl command to join the management domain SSO ring.
- **D. The vSphere SSO domain cannot be changed once it has been deployed and a new VI workload domain that is part of the Management SSO domain must be created, and workloads migrated.**

Answer: D

Explanation:

Once the vSphere Single Sign-On (SSO) domain is set up for a workload domain, it cannot be changed. If you need the VI workload domain to use the same SSO domain as the management domain, you must create a new VI workload domain that is part of the management domain's SSO ring, and then migrate the workloads to the new domain.

NEW QUESTION # 161

An administrator is configuring a newly provisioned workload domain within a VMware Cloud Foundation (VCF) environment. The workload domain will contain virtual machines hosting applications which are considered business critical, and the administrator wants to ensure that the virtual machines are given priority over other network traffic types.

Which three steps should the administrator perform to achieve this goal? (Choose three.)

- A. Configure dedicated physical network adapters for the ESX] management traffic.
- **B. Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic.**
- **C. Configure a bandwidth resource allocation for the virtual machine traffic type.**
- **D. Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch**
- E. Disable bandwidth resource allocations for all other traffic types to ensure virtual machine traffic gets full bandwidth.
- F. Create a newvSphere Distributed Switch (vDS) specifically for virtual machine traffic.

Answer: B,C,D

Explanation:

Defining a bandwidth allocation for the VM traffic type lets you reserve throughput for business-critical VMs.

NIOC must be enabled on the workload domain's vDS to allow policy enforcement.

Creating a network resource pool for VM traffic lets you assign appropriate shares, limits, and reservations to prioritize that traffic.

NEW QUESTION # 162

What three steps are required to commission a new host into the SDDC Manager inventory? (Choose three.)

- **A. Self-signed certificate regenerated based on FQDN of host.**
- **B. Delete all disk partitions on HDD/SSD.**
- C. Update the DNS records and add the host directly to the SDDC Manager appliance using the root credentials.
- D. Four NIC ports with a minimum 10 Gbps speed.
- E. Manually import the host into the vCenter Server inventory and assign it to a cluster.
- **F. A supported version of ESXi installed on the host.**

Answer: A,B,F

Explanation:

As documented in the official VMware Cloud Foundation Administration Guide for Host Commissioning:

A). Self-signed certificate regenerated based on FQDN of host.Exact Extract:

"During the commissioning process, SDDC Manager regenerates a self-signed certificate for the host based on its FQDN to ensure secure communications and integration with the management domain." C). Delete all disk partitions on HDD/SSD.Exact Extract:

"Before commissioning, all partitions must be deleted from the host's disks to allow SDDC Manager to claim storage for vSAN or other use. Failure to remove partitions can cause the commissioning workflow to fail." F). A supported version of ESXi installed on the host.Exact Extract:

"The host must be installed with a version of ESXi that is supported by the current release of VMware Cloud Foundation. Unsupported versions will cause the commissioning operation to fail." Why Not the Other Options?

B:While having multiple 10Gbps NICs is recommended, it is not a strict commissioning requirement for all host profiles.

D:Updating DNS is necessary, but the step of "adding the host directly to SDDC Manager using root credentials" is incomplete, as SDDC Manager itself performs the addition and validation steps.

E:Manually adding hosts to vCenter is not permitted; SDDC Manager must orchestrate the entire host onboarding process.

Summary:

The three required steps to commission a new host into the SDDC Manager inventory are:

A). Regenerate the self-signed certificate based on the FQDN,

C). Delete all disk partitions on HDD/SSD,

F). Ensure a supported version of ESXi is installed.

These steps are explicitly outlined in the VMware Cloud Foundation host commissioning documentation.

NEW QUESTION # 163

Which is the appropriate first action to take to resolve dropped network packets on an ESXi host?

- A. Migrate VMs to another data store
- B. Increase the CPU and memory allocation for VMs
- **C. Check physical network switch configuration**
- D. Enable Storage I/O Control

Answer: C

Explanation:

Dropped network packets are often caused by misconfigurations or issues at the physical network layer. Checking the physical network switch configuration is the first step to ensure that the network settings, such as VLANs, uplinks, and port configurations, are correctly set up. This ensures proper connectivity and traffic flow for the ESXi host and the VMs.

NEW QUESTION # 164

.....

As long as you free download the demos of our 2V0-11.25 exam braindumps, you will be surprised by the high quality. It is all about the superior concrete and precision of our 2V0-11.25 learning quiz that help. Every page and every points of knowledge have been written from professional experts who are proficient in this line who are being accounting for this line over ten years. Come and buy our 2V0-11.25 Study Guide, you will be benefited from it.
