EMC Dell PowerFlex Operate Exam Sample Questions (Q81-Q86):

NEW QUESTION # 81
What is the primary purpose of snapshots in PowerFlex?

- A. Automate data replication between clusters
- B. Enable point-in-time data recovery
- C. Improve storage performance metrics
- D. Reduce storage redundancy

Answer: B

Explanation:
* Enable point-in-time data recovery (Option B): A snapshot freezes the state of a volume at a specific second. If data is subsequently corrupted, deleted, or encrypted by ransomware, the administrator can use the snapshot to restore the data exactly as it was at that "point in time," minimizing data loss.

NEW QUESTION # 82
CloudLink integration in PowerFlex provides encryption for data in transit. True. False.

- A. True
- B. False

Answer: A,B

Explanation:
* False: CloudLink is primarily a Data at Rest Encryption (D@RE) and Key Management solution.
* Detail: CloudLink integrates with PowerFlex to manage the keys for Self-Encrypting Drives (SEDs) or software-based encryption (SDRE). This protects data if a physical drive is stolen from the datacenter.
* Data in Transit: Encryption of data "in flight" (between SDC and SDS, or SDS and SDS) is handled by the PowerFlex native Secure Data Transfer (SDT) protocol (introduced in v4.0) or external network encryption (IPsec/VPN). While CloudLink might manage the keys for SDT in newer versions, the core definition of the CloudLink integration feature in PowerFlex exams historically refers to D@RE.

NEW QUESTION # 83
What is the primary function of alerting in PowerFlex security?

- A. Automate encryption key rotation
- B. Manage compliance baselines for devices
- C. Configure multi-factor authentication
- D. Notify administrators of potential security issues

Answer: D

Explanation:
While "alerting" is a broad topic, in the context of security:
* Notify administrators of potential security issues (Option B): The alerting system is designed to trigger notifications for security-relevant events. Examples include:
* Failed Login Attempts: Repeated failures which might indicate a brute-force attack.
* Unauthorized Access: Connections from unapproved IPs (if restrictions are set).
* Certificate Expiry: Warning that SSL/TLS certificates are about to expire, which would break secure management connections.
* Encryption Failures: Alerts if a SED drive is unlocked or CloudLink key retrieval fails.

NEW QUESTION # 84
What is the default state of snapshots created in PowerFlex?

- A. Read-only
- B. Archived
- C. Active
- D. Editable

Answer: D

Explanation:
* Editable (Writable): Unlike many traditional storage arrays where a snapshot is a read-only frozen image requiring a "clone" to become writable, PowerFlex snapshots are fully writable volumes by default.
* Behavior: Immediately upon creation, a snapshot is mapped as a volume. You can mount it to a host, write new data to it, delete files from it, or format it, without affecting the source parent volume (due to the Redirect-on-Write architecture).

NEW QUESTION # 85
What type of authentication is supported for managing user accounts in PowerFlex?

- A. SAML
- B. TACACS+
- C. RADIUS
- D. LDAP

Answer: D

Explanation:
LDAP (Lightweight Directory Access Protocol) is the primary external authentication method supported by the PowerFlex core (MDM) for managing user access.
* Integration: PowerFlex can be configured to query an Active Directory or OpenLDAP server. This allows administrators to map AD Groups (e.g., "Storage Admins") to PowerFlex roles (e.g.,
"SuperUser"), centralizing password management and user termination.
* Note on SAML: While PowerFlex Manager (the management platform) and newer versions (v4.x) support SAML/OIDC for Single Sign-On, LDAP remains the fundamental answer for core authentication in most exam contexts unless specifically asking about PowerFlex Manager 4.0 Identity Management. TACACS+ and RADIUS are network-centric protocols and are generally not supported by the PowerFlex storage core.
