## Platform-App-Builder Latest Test Simulations - Valid Platform-App-Builder Exam Camp Pdf

A lot of applicants have studied from Salesforce Platform-App-Builder practice material. They have rated it positively because they have cracked Salesforce Certified Platform App Builder (Platform-App-Builder) certification on their first try. RealValidExam guarantees its customers that they can pass the Salesforce Certified Platform App Builder (Platform-App-Builder) test on the first attempt.

## Salesforce Certified Platform App Builder Sample Questions (Q56-Q61):

### NEW QUESTION # 56

Standard picklist fields can be controlling or dependent.

- A. False
- B. True

**Answer: A**

Explanation:

Standard picklist fields can be controlling fields but not dependent fields.

### NEW QUESTION # 57

An Alexa Skill Builder wants a skill to inform the users of the number of times they have launched the skill. What approach should the Builder take to track this information?

- A. Store and increment a launchCountsession attribute.
- B. Perform a scan of the Amazon DynamoDB table for the number of records and count each record as a skill launch.
- **C. Using the ASK SDK, implement a persistent attribute that is stored and retrieved from Amazon DynamoDB.**
- D. Set up a global variable in the code project that increments each time the code is invoked by Amazon Alexa.

**Answer: C**

Explanation:

### NEW QUESTION # 58

Cloud Kicks asked the app builder to insert a list of 25,000 records using deduplication for the Race\_Track\_\_c customobject. Which tool should be used?

- **A. Data Loader**
- B. Lightning Object Creator
- C. Schema Builder
- D. Import Wizard

**Answer: A**

Explanation:

Cloud Kicks needs to insert 25,000 records with deduplication for the Race\_Track\_\_c custom object. Here's the reasoning for choosing Data Loader:

\* Data Loader: This is the appropriate tool for importing large volumes of data (up to 5 million records) into Salesforce. It also provides deduplication options through Salesforce's native matching rules or by implementing external checks. Data Loader is highly scalable, and for 25,000 records, it is well-suited because it can handle more than the Import Wizard's record limits.

\* Option A (Import Wizard): The Import Wizard is not a good choice here because it supports up to 50,000 records, which may seem acceptable. However, it is generally recommended for smaller data imports, and deduplication options are limited compared to what Data Loader offers. Additionally, for bulk operations like 25,000 records, Data Loader is more efficient and robust.

Import Wizard Limitations

Option B (Lightning Object Creator): This tool is used to create custom objects from spreadsheets and is not designed for bulk data loading or deduplication. It's not appropriate for large data imports.

Option D (Schema Builder): Schema Builder is a tool used to view and modify the structure of objects and fields in Salesforce, not for data import or deduplication purposes.

In summary, Data Loader is the most appropriate tool for importing a large number of records with deduplication needs.

### NEW QUESTION # 59

A field designated as required, is only required when it is added to a user's page layout.

- **A. False**
- B. True

**Answer: A**

### NEW QUESTION # 60

What is a true statement in regards to creating custom report types?

- A. The detail object in a master- detail relationship cannot be added as a secondary object on a custom report type
- B. Any object can be chosen unless the object is no visible to the person creating the report type through security settings

- C. Once a report type is saved with a standard or custom primary object, the primary object cannot be changed for that report type.
- D. When the primary object is a custom object and is deleted, then the report type and any reports created from it must be deleted manually.

**Answer: C**

Explanation:

Explanation: You can choose from all objects-even those you don't have permission to view. This lets you build report types for a variety of users. Once you save a report type, you can't change the primary object. If the primary object on a report type is a custom object, and the custom object is deleted, then the report type and any reports created from it are automatically deleted. If you remove an object from a report type, all references to that object and its associated objects are automatically removed from reports and dashboards based on that type.
