buy the JN0-224 training materials.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q66-Q71):

NEW QUESTION # 66

You must use Junos PyEZ to configure unique IP addresses on individual machines.

Which two features will permit this requirement? (Choose). I an SCP module

- A. a BSON data file
- B. an SCP module
- C. a Jinja2 template
- D. a YAML data file

Answer: C,D

Explanation:

To configure unique IP addresses on individual machines using Junos PyEZ, you can use the following features:

YAML Data File (C): YAML files are used to store configuration data in a human-readable format. They are often used in combination with Jinja2 templates to provide the data necessary for template rendering.

Jinja2 Template (D): Jinja2 is a templating engine for Python that allows you to create dynamic templates. When used with Junos PyEZ, a Jinja2 template can be filled with data (such as IP addresses from a YAML file) to generate configuration snippets that are applied to different devices.

Options A (SCP module) and B (BSON data file) are not typically used with Junos PyEZ for this purpose.

Reference:

Junos PyEZ Documentation: Discusses the use of YAML files and Jinja2 templates for generating configurations.

Jinja2 Templating Documentation: Provides details on how to create and use templates in Python scripts.

NEW QUESTION # 67

Exhibit.

Referring to the exhibit, which statement about REST is correct?

- A. The device is configured to allow only two simultaneous REST connections.
- B. The device is configured to allow HTTP connections on port 3030.
- C. The device is configured to allow connections from the REST API Explorer
- D. The device is configured to allow HTTPS connections on port 3443.

Answer: D

NEW QUESTION # 68

Which statement about the NETCONF content layer is true?

- A. It uses YAML for RPC request and response payloads.
- **B. It uses XML for RPC request and response payloads.**
- C. It uses JSON for RPC request and response payloads.
- D. It uses HTML for RPC request and response payloads.

Answer: B

NEW QUESTION # 69

Exhibit.

```
<rpc-reply xmlns:junos="http://xml.juniper.net/junos/20.1R0/junos">
  <configuration junos:commit-seconds="1589295982" junos:commit-localtime="2020-05-12 15:06:22
UTC" junos:commit-user="user">
    <interfaces>
      <interface>
        <name>ge-0/0/1</name>
        <unit>
          <name>0</name>
          <family>
            <inet>
              <address>
                <name>192.168.10.1/24</name>
              </address>
            </inet>
          </family>
        </unit>
      </interface>
      <interface>
        <name>fxp0</name>
        <unit>
          <name>0</name>
          <family>
            <inet>
              <address>
                <name>172.25.11.1/24</name>
              </address>
            </inet>
          </family>
        </unit>
      </interface>
    </interfaces>
  </configuration>
</rpc-reply>
```

Referring to the exhibit, which XML XPath expression will only show the IP address XML elements?

- A. /name
- **B. //address/name**
- C. /address/name
- D. //name

Answer: B

Explanation:

https://www.w3schools.com/xml/xpath_syntax.asp

NEW QUESTION # 70

You are asked to develop an on-box Junos script that prevents deletion of the SNMP configuration. Which type of script serves this purpose?

- A. event script
- B. SNMP script
- C. op script
- **D. commit script**

Answer: D

Explanation:

A commit script in Junos is used to enforce policies and configuration constraints on the device. These scripts are written in Extensible Stylesheet Language Transformations (XSLT) or Python and are executed automatically during the commit process of a configuration change.

In this context, to prevent the deletion of the SNMP configuration, a commit script is the appropriate choice. It can be designed to check the configuration changes being committed and reject any commit that attempts to delete or modify the SNMP configuration. This script essentially acts as a gatekeeper, ensuring that only allowable changes are committed to the device configuration.

Supporting Reference:

Juniper Networks Commit Scripts Documentation: The official Juniper documentation provides examples and use cases of commit scripts, including how they can be used to prevent unauthorized changes to the device configuration.

"Junos Automation Scripting" by Jonathan Looney: This resource gives practical examples and best practices for creating commit scripts to enforce configuration policies in Junos OS.

NEW QUESTION # 71

.....

We have a team of rich-experienced IT experts who written the valid Juniper vce braindumps based on the actual questions and checked the updating of JN0-224 dumps torrent everyday to make sure the success of test preparation. Before you buy our JN0-224 Exam PDF, you can download the demo of free vce to check the accuracy.

JN0-224 Real Torrent: https://www.actualpdf.com/JN0-224_exam-dumps.html

Now, we will provide you with the cost-efficient and time-saving JN0-224 updated exam torrent and to help you get your certification, With our software version of our JN0-224 guide braindumps, you can practice and test yourself just like you are in a real exam for our JN0-224 study materials have the advantage of simulating the real exam, You don't have to install excessive plugins or software to attempt this Juniper JN0-224 practice test.

Because services do not interact with the desktop, a user Exam JN0-224 Reference sitting at the console is normally not aware if a service is started, The array can then be iterated over.

Now, we will provide you with the cost-efficient and time-saving JN0-224 updated exam torrent and to help you get your certification, With our software version of our JN0-224 guide braindumps, you can practice and test yourself just like you are in a real exam for our JN0-224 study materials have the advantage of simulating the real exam.
