## ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q81-Q86):

### NEW QUESTION # 81

In which of the following forms of bulk data collection are large amounts of data first collected from multiple sources in multiple formats and then processed to achieve threat intelligence?

- A. Hybrid form
- B. Production form

- C. Structured form
- **D. Unstructured form**

**Answer: D**

#### NEW QUESTION # 82

Lizzy, an analyst, wants to recognize the level of risks to the organization so as to plan countermeasures against cyber attacks. She used a threat modelling methodology where she performed the following stages:

Stage 1: Build asset-based threat profiles

Stage 2: Identify infrastructure vulnerabilities

Stage 3: Develop security strategy and plans

Which of the following threat modelling methodologies was used by Lizzy in the aforementioned scenario?

- A. DREAD
- B. TRIKE
- C. VAST
- **D. OCTAVE**

**Answer: D**

#### NEW QUESTION # 83

What is the correct sequence of steps involved in scheduling a threat intelligence program?

1. Review the project charter
2. Identify all deliverables
3. Identify the sequence of activities
4. Identify task dependencies
5. Develop the final schedule
6. Estimate duration of each activity
7. Identify and estimate resources for all activities
8. Define all activities
9. Build a work breakdown structure (WBS)

- A. 1-->2-->3-->4-->5-->6-->9-->8-->7
- B. 3-->4-->5-->2-->1-->9-->8-->7-->6
- **C. 1-->9-->2-->8-->3-->7-->4-->6-->5**
- D. 1-->2-->3-->4-->5-->6-->7-->8-->9

**Answer: C**

Explanation:

The correct sequence for scheduling a threat intelligence program involves starting with the foundational steps of defining the project scope and objectives, followed by detailed planning and scheduling of tasks. The sequence starts with reviewing the project charter (1) to understand the project's scope, objectives, and constraints. Next, building a Work Breakdown Structure (WBS) (9) helps in organizing the team's work into manageable sections. Identifying all deliverables (2) clarifies the project's outcomes. Defining all activities (8) involves listing the tasks required to produce the deliverables. Identifying the sequence of activities (3) and estimating resources (7) and task dependencies (4) sets the groundwork for scheduling. Estimating the duration of each activity (6) is critical before developing the final schedule (5), which combines all these elements into a comprehensive plan. This approach ensures a structured and methodical progression from project initiation to execution.

#### NEW QUESTION # 84

H&P, Inc. is a small-scale organization that has decided to outsource the network security monitoring due to lack of resources in the organization. They are looking for the options where they can directly incorporate threat intelligence into their existing network defense solutions.

Which of the following is the most cost-effective methods the organization can employ?

- A. Recruit data management solution provider
- B. Look for an individual within the organization
- C. Recruit the right talent
- **D. Recruit managed security service providers (MSSP)**

**Answer: D**

#### NEW QUESTION # 85

Daniel is a professional hacker whose aim is to attack a system to steal data and money for profit. He performs hacking to obtain confidential data such as social security numbers, personally identifiable information (PII) of an employee, and credit card information. After obtaining confidential data, he further sells the information on the black market to make money. Daniel comes under which of the following types of threat actor.

- **A. Organized hackers**
- B. State-sponsored hackers
- C. Insider threat
- D. Industrial spies

**Answer: A**

Explanation:

Daniel's activities align with those typically associated with organized hackers. Organized hackers or cybercriminals work in groups with the primary goal of financial gain through illegal activities such as stealing and selling data. These groups often target large amounts of data, including personal and financial information, which they can monetize by selling on the black market or dark web. Unlike industrial spies who focus on corporate espionage or state-sponsored hackers who are backed by nation-states for political or military objectives, organized hackers are motivated by profit. Insider threats, on the other hand, come from within the organization and might not always be motivated by financial gain. The actions described in the scenario-targeting personal and financial information for sale-best fit the modus operandi of organized cybercriminal groups.
