GetValidTest AWS-Solutions-Associate valid training material is the efforts of our professional experts. They edit and compile the AWS-Solutions-Associate questions and answers using their professional technology and hands-on experience. So if you want to pass with 100% guarantee, AWS-Solutions-Associate vlid exam files will give you security and high scores. You will complete your Amazon AWS-Solutions-Associate exam preparation in a short time and attend the actual test with comfortable mood.

The AWS-Solutions-Associate Certification Exam is designed for individuals who want to validate their knowledge and skills in designing and deploying scalable, highly available, and fault-tolerant systems on Amazon Web Services (AWS). AWS Certified Solutions Architect - Associate (SAA-C03) certification is intended for solution architects, developers, system administrators, and anyone who is interested in learning about AWS cloud computing.

To be eligible for the exam, candidates must have a basic understanding of AWS services, such as EC2, S3, and RDS, and some experience in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. They must also have a solid understanding of various architectural patterns and best practices for building reliable, scalable, and secure AWS systems.

Valid AWS-Solutions-Associate Test Camp, AWS-Solutions-Associate Exam Testking

The price of Amazon AWS-Solutions-Associate updated exam dumps is affordable. You can try the free demo version of any Amazon AWS-Solutions-Associate exam dumps format before buying. For your satisfaction, GetValidTest gives you a free demo download facility. You can test the features and then place an order. So, these real and updated AWS Certified Solutions Architect - Associate (SAA-C03) AWS-Solutions-Associate Dumps are essential to pass the AWS-Solutions-Associate exam.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q252-Q257):

NEW QUESTION # 252
A company has an application workflow that uses an AWS Lambda function to download and decrypt files from Amazon S3. These

files are encrypted using AWS Key Management Service Customer Master Keys (AWS KMS CMKs). A solutions architect needs to design a solution that will ensure the required permissions are set correctly.
Which combination of actions accomplish this? (Choose two.)

- A. Create a new IAM role with the kms:decrypt permission and attach the execution role to the Lambda function.
- B. Grant the decrypt permission for the Lambda resource policy in the KMS key's policy.
- C. Grant the decrypt permission for the Lambda IAM role in the KMS key's policy.
- D. Create a new IAM policy with the kms:decrypt permission and attach the policy to the Lambda function.
- E. Attach the kms:decrypt permission to the Lambda function's resource policy.

Answer: A,C

NEW QUESTION # 253
A company runs an application using Amazon ECS. The application creates esi/ed versions of an original image and then makes Amazon S3 API calls to store the resized images in Amazon S3.
How can a solutions architect ensure that the application has permission to access Amazon S3?

- A. Create an IAM role with S3 permissions, and then specify that role as the taskRoleAm in the task definition.
- B. Create an IAM user with S3 permissions, and then relaunch the Amazon EC2 instances for the ECS cluster while logged in as this account.
- C. Create a security group that allows access from Amazon ECS to Amazon S3, and update the launch configuration used by the ECS cluster.
- D. Update the S3 role in AWS IAM to allow read/write access from Amazon ECS, and then relaunch the container.

Answer: A

Explanation:

NEW QUESTION # 254
A company recently launched a new product that is highly available in one AWS Region The product consists of an application that runs on Amazon Elastic Container Service (Amazon ECS), apublic Application Load Balancer (ALB), and an Amazon DynamoDB table. The company wants a solution that will make the application highly available across Regions.
Which combination of steps will meet these requirements? (Select THREE.)

- A. Create an Amazon Route 53 failover record.
- B. In a different Region, deploy the application to a new ECS cluster that is accessible through a new ALB.
- C. Create an AWS PrivateLink endpoint for the application.
- D. Modify the DynamoDB table to create global secondary indexes (GSIs).
- E. Modify the DynamoDB table to create a DynamoDB global table.
- F. In the same Region, deploy the application to an Amazon Elastic Kubernetes Service (Amazon EKS) cluster that is accessible through a new ALB.

Answer: A,B,E

Explanation:
To make the application highly available across regions:
Deploy the application in a different region using a newECS clusterandALBto ensure regional redundancy.
UseRoute 53 failover routingto automatically direct traffic to the healthy region in case of failure.
UseDynamoDB Global Tablesto ensure the database is replicated and available across multiple regions, supporting read and write operations in each region.
Option D (EKS cluster in the same region): This does not provide regional redundancy.
Option E (Global Secondary Indexes): GSIs improve query performance but do not provide multi-region availability.
Option F (PrivateLink): PrivateLink is for secure communication, not for cross-region high availability.
AWS References:
DynamoDB Global Tables
Amazon ECS with ALB

NEW QUESTION # 255

Which combination of two policies enables AWS identity and access management cross-account access?
Choose 2 answers

- A. Bucket policy
- B. Key policy
- C. Access policy
- D. Permission policy
- E. Trust policy

Answer: A,D

NEW QUESTION # 256

A photo-sharing service stores pictures in Amazon Simple Storage Service (53) and allows application sign-in using an OpenID Connect-compatible identity provider. Which AWS Security Token Service approach to temporary access should you use for the Amazon 53 operations?

- A. Cross-Account Access
- B. AWS Identity and Access Management roles
- C. SAML-based Identity Federation
- D. Web Identity Federation

Answer: D
