Our staff really regards every user as a family member and sincerely provides you with excellent service.

### Cisco DevNet Associate Exam Sample Questions (Q120-Q125):

#### NEW QUESTION # 120

Refer to the exhibit.

The documentation outlines how to use credentials for the AMP API. Which script successfully performs an API call using basic authentication?

- ☐ A)
- ☐ B)
- ☐ C)
- ☐ D)

- A. Option
- B. Option
- C. Option
- D. Option

**Answer: D**

#### NEW QUESTION # 121

Refer to the exhibit.

An API call is constructed to retrieve the inventory in XML format by using the API. The response to the call is 401 Unauthorized. Which two headers must be added to the API call? (Choose two.)

☐

- A. Option B
- B. Option E
- C. Option C
- D. Option D
- E. Option A

**Answer: B,C**

Explanation:

The 401 Unauthorized response indicates that the API call lacks proper authentication. To authenticate a request using a Bearer token, the correct headers must be included. The "Authorization: Bearer <token>" header is the correct format for including a Bearer token in an API request. Additionally, specifying the correct content type can also be important, but in this case, the critical headers are related to authorization.

\* Cisco DevNet Associate Study Guide: API Authentication (Chapter 7, Section: Authentication Methods for REST APIs).

### NEW QUESTION # 122

What is a capability of model-driven programmability for infrastructure automation?

- A. generic APIs that are compatible with multiple platforms
- B. automatic version control
- C. a single data model across the network
- D. compatibility with any networking device

**Answer: C**

### NEW QUESTION # 123

Refer to the exhibit.

A developer must integrate a bot with an internal communication app. The developer wants to replace the webexbot package with the teamsbot package by using Ansible and prepares a playbook. In the first two tasks, the playbook stops the webexbot and verifies that the teamsbot is installed. What is accomplished in the last task of the workflow when the developer runs the Ansible playbook?

- A. stops the webexbot service and uninstalls it and retains its configuration files
- B. installs the webexbot and retains the configuration files
- C. uninstalls the webexbot package and removes its configuration files
- D. searches whether the purge package is available in the repository and uninstalls the webexbot package

**Answer: C**

Explanation:

In the Ansible playbook, the last task uses the apt module with state: absent and purge: yes for the webexbot package. This configuration ensures that the package is uninstalled and all associated configuration files are removed. This is different from a simple uninstall, which would leave configuration files behind.

### NEW QUESTION # 124

Which library or platform can be used to leverage APIC REST API easily?

- A. COBRA
- B. acitoolkit
- C. APIC-EM
- D. NX-API

**Answer: B**

### NEW QUESTION # 125

.....
