Professional-Cloud-DevOps-Engineer Exam Dumps | Professional-Cloud-DevOps-Engineer Brain Dumps

Are you racking your brains for a method how to pass Google Professional-Cloud-DevOps-Engineer exam? Google Professional-Cloud-DevOps-Engineer certification test is one of the valuable certification in modern IT certification. Within the last few decades, IT got a lot of publicity and it has been a necessary and desirable part of modern life. Google certification has been well recognized by international community. So, most IT people want to improve their knowledge and their skills by Google certification exam. Professional-Cloud-DevOps-Engineer test is one of the most important exams and the certificate will bring you benefits.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

You work for a global organization and are running a monolithic application on Compute Engine. You need to select the machine type for the application to use that optimizes CPU utilization by using the fewest number of steps. You want to use historical system

metrics to identify the machine type for the application to use. You want to follow Google-recommended practices. What should you do?

- A. Review the Cloud Monitoring dashboard for the VM and choose the machine type with the lowest CPU utilization
- B. Install the Ops Agent in a fleet of VMs by using the gcloud CLI
- **C. Use the Recommender API and apply the suggested recommendations**
- D. Create an Agent Policy to automatically install Ops Agent in all VMs

Answer: C

NEW QUESTION # 71

You manage an application that runs in Google Kubernetes Engine (GKE) and uses the blue/green deployment methodology. Extracts of the Kubernetes manifests are shown below:

The Deployment `app-green` was updated to use the new version of the application. During post-deployment monitoring, you notice that the majority of user requests are failing. You did not observe this behavior in the testing environment. You need to mitigate the incident's impact on users and enable the developers to troubleshoot the issue. What should you do?

- A. Update the Deployment `app-green` to use the previous version of the application
- B. Update the Deployment `app-blue` to use the new version of the application
- **C. Change the selector on the Service `app-2vc` to `app: my-app`.**
- D. Change the selector on the Service `app-svc` to `app: my-app, version: blue`

Answer: C

NEW QUESTION # 72

You support a high-traffic web application with a microservice architecture. The home page of the application displays multiple widgets containing content such as the current weather, stock prices, and news headlines. The main serving thread makes a call to a dedicated microservice for each widget and then lays out the homepage for the user. The microservices occasionally fail; when that happens, the serving thread serves the homepage with some missing content. Users of the application are unhappy if this degraded mode occurs too frequently, but they would rather have some content served instead of no content at all. You want to set a Service Level Objective (SLO) to ensure that the user experience does not degrade too much. What Service Level Indicator (SLI) should you use to measure this?

- A. A latency SLI: the ratio of microservice calls that complete in under 100 ms to the total number of microservice calls
- B. A quality SLI: the ratio of non-degraded responses to total responses
- **C. An availability SLI: the ratio of healthy microservices to the total number of microservices**
- D. A freshness SLI: the proportion of widgets that have been updated within the last 10 minutes

Answer: C

Explanation:

NEW QUESTION # 73

Your team is writing a postmortem after an incident on your external-facing application. Your team wants to improve the postmortem policy to include triggers that indicate whether an incident requires a postmortem. Based on Site Reliability Engineering (SRE) practices, what triggers should be defined in the postmortem policy?

Choose 2 answers

- A. The monitoring system detects that one of the instances for your application has failed
- B. The CD pipeline detects an issue and rolls back a problematic release.
- **C. An internal stakeholder requests a postmortem**
- D. Data is lost due to an incident
- **E. An external stakeholder asks for a postmortem**

Answer: C,E

NEW QUESTION # 74

You need to deploy a new service to production. The service needs to automatically scale using a Managed Instance Group (MIG) and should be deployed over multiple regions. The service needs a large number of resources for each instance and you need to plan for capacity. What should you do?

- A. Monitor results of Stackdriver Trace to determine the required amount of resources.
- **B. Use the n1-highcpu-96 machine type in the configuration of the MIG.**
- C. Validate that the resource requirements are within the available quota limits of each region.
- D. Deploy the service in one region and use a global load balancer to route traffic to this region.

Answer: B

NEW QUESTION # 75
