### CFA Institute Certificate in ESG Investing Sample Questions (Q440-Q445):

#### NEW QUESTION # 440

Asset owners can reflect ESG considerations through corporate engagement by:

- A. discussing ESG issues with an investee company's board.
- B. using ESG criteria to identify investment opportunities through a thematic approach.
- C. working with regulators to design a more stable financial system.

**Answer: A**

Explanation:

Asset owners can reflect ESG considerations through corporate engagement by discussing ESG issues with an investee company's board. This direct engagement allows asset owners to influence corporate behavior, encourage better ESG practices, and address specific ESG concerns that may impact long-term value creation.

This approach is integral to active ownership and stewardship strategies.

#### NEW QUESTION # 441

Which of the following asset classes has the lowest degree of ESG integration?

- A. Investment grade corporate debt
- B. Sovereign debt
- C. Emerging markets corporate debt

**Answer: B**

Explanation:

Sovereign debt has the lowest degree of ESG integration compared to investment-grade corporate debt and emerging markets corporate debt. This is due to several factors:

Limited ESG Data: There is generally less ESG data available for sovereign issuers compared to corporate issuers. Sovereign ESG assessments rely on country-level indicators, which may not be as detailed or specific as corporate ESG disclosures.

Complexity of ESG Factors: The ESG factors affecting sovereign debt are more complex and broader in scope, encompassing issues like political stability, governance, human rights, and environmental policies. This complexity makes it challenging to integrate ESG factors effectively.

Market Practices: The integration of ESG factors into sovereign debt investment processes is less advanced compared to corporate debt markets. While there is growing interest, the methodologies and frameworks for assessing sovereign ESG risks are still developing.

Reference:

MSCI ESG Ratings Methodology (2022) - Discusses the challenges and current state of ESG integration across different asset classes, highlighting the relative lag in sovereign debt.

ESG-Ratings-Methodology-Exec-Summary (2022) - Provides insights into the varying degrees of ESG integration in different asset classes and the factors contributing to these differences.

#### NEW QUESTION # 442

During the decommissioning phase of a company's mining project, the government tightens regulations on land restoration. Which of the following is most likely impacted?

- A. provision
- B. revenue
- C. taxes

**Answer: A**

Explanation:

During the decommissioning phase of a mining project, tightening regulations on land restoration impact the financial provisions that a company must set aside. These provisions are financial reserves allocated to cover the costs associated with decommissioning activities, including environmental restoration and compliance with regulatory requirements.

\* Provisions for Land Restoration: Provisions represent the estimated costs a company anticipates needing to restore land to its original state or meet regulatory standards once mining operations cease.

Tightening regulations typically increase the required provision amount, as more stringent standards necessitate greater restoration efforts and costs.

\* Financial Impact: While taxes and revenue might be indirectly affected, provisions are directly impacted as they must be adjusted to reflect the increased costs of compliance with the new regulations. This adjustment ensures that the company is financially prepared to meet its legal and environmental obligations during the decommissioning phase.

#### NEW QUESTION # 443

Determining which ESG issues are material:

- A. excludes impacts on short-term financial performance.
- **B. involves judgment.**
- C. is a process that is independent of a company's industry and business model.

**Answer: B**

Explanation:

Determining material ESG issues involves significant judgment based on the company's industry, business model, and specific risk factors. This process helps to focus on the most relevant ESG considerations.

#### NEW QUESTION # 444

Compared to developed markets, ESG investing in emerging markets is most likely characterized by:

- A. fewer opportunities for investors to engage with companies and improve ESG performance
- **B. lower transferability of approaches and principles methods from developed markets**
- C. more data and less variability between countries and companies

**Answer: B**

Explanation:

Compared to developed markets, ESG investing in emerging markets is most likely characterized by lower transferability of approaches and principles methods from developed markets.

Market Differences: Emerging markets often have different regulatory environments, cultural contexts, and levels of market development compared to developed markets. These differences can affect how ESG principles and methodologies are applied.

Transferability Issues: The approaches and principles developed in more mature markets may not always be directly applicable in emerging markets. Factors such as differing levels of corporate governance, environmental regulations, and social norms require adaptations to ESG strategies.

Customization Needed: Investors in emerging markets need to tailor their ESG approaches to the local context to effectively address the unique challenges and opportunities present in these markets.

CFA ESG Investing Reference:

The CFA Institute's resources on global ESG investing emphasize the importance of understanding local contexts and adapting strategies accordingly. This is particularly relevant in emerging markets, where direct transferability of developed market principles may not be effective.
