

Free PDF Quiz 2026 MB-335: Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Accurate Trustworthy Pdf

What's more, part of that TestkingPass MB-335 dumps now are free: <https://drive.google.com/open?id=1Zb14ca5-KChzXup5AILGrgMw9yLR46kD>

If you purchasing our MB-335 simulating questions, you will get a comfortable package services afforded by our considerate after-sales services. We respect your needs toward the useful MB-335 practice materials by recommending our MB-335 Guide preparations for you. And we give you kind and professional supports by 24/7, as long as you can have problems on our MB-335 study guide, then you can contact with us.

Microsoft MB-335 certification exam is designed for professionals who want to demonstrate their expertise in Dynamics 365 Supply Chain Management. Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert certification exam is intended for functional consultants who work with Dynamics 365 Supply Chain Management to implement and configure the application to meet the business requirements of their clients. Passing MB-335 exam validates that a candidate has the skills and knowledge required to successfully implement Supply Chain Management solutions that maximize efficiency, optimize operations, and improve customer satisfaction.

Microsoft MB-335 Exam is a certification exam designed for professionals looking to validate their expertise in the field of supply chain management using Microsoft Dynamics 365. MB-335 exam is specifically designed for functional consultants who specialize in supply chain management and wish to prove their proficiency in implementing and configuring the Dynamics 365 Supply Chain Management application.

MB-335 Dumps Guide, MB-335 Test Certification Cost

We will provide you with comprehensive study experience by give you MB-335 free study material & Microsoft exam prep torrent. The questions & answers from the Microsoft practice torrent are all valid and accurate, made by the efforts of a professional IT team. The authority and validity of Microsoft MB-335 training practice are the guarantee for all the IT candidates. We arrange our experts to check the update every day. Once there is any new technology about MB-335 Exam Dumps, we will add the latest questions into the MB-335 study pdf, and remove the useless study material out, thus to ensure the MB-335 exam torrent you get is the best valid and latest. So 100% pass is our guarantee.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q60-Q65):

NEW QUESTION # 60

A discrete manufacturer uses Dynamics 365 Supply Chain Management for time and attendance registrations on the shop floor. Production worker A and production worker B clock in at 7 AM. They clock out at different times. Their work schedules are shown in the following table.

You need to determine how the current configuration will book the time.

What is logged in the system for each worker? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 61

A beverage company uses Dynamics 365 Supply Chain Management batch processing for production. You need to identify the ingredient type used in batch processing when the base attribute of a product is added to a formula line.

What is the ingredient type?

- A. compensating
- B. filler
- C. none
- D. active

Answer: D

Explanation:

Explanation

The ingredient type used in batch processing when the base attribute of a product is added to a formula line is Active. Here is the explanation:

A formula line is a line that identifies an ingredient or item that makes up a formula. A formula line can have one of these ingredient types: None, Active, Compensating, or Filler¹. The ingredient type determines how the system handles the line during master planning and batch order production¹.

The Active ingredient type indicates that the item is an active ingredient that has a variable quantity and a fixed potency. The active ingredient of a product is modeled by using a product-specific batch attribute that has a minimum value, a maximum value, and a target level². The target level of a batch attribute represents the estimated percentage of an active ingredient in a product².

When the base attribute of a product is added to a formula line, it means that the product has an active ingredient that is defined by the base attribute. Therefore, the ingredient type for the formula line should be Active. This way, the system can calculate the amount of ingredients to use in a production batch based on the concentration of active ingredients in selected product batches². This process is known as batch balancing².

1: Batch balancing 2: Formulas and formula versions

NEW QUESTION # 62

You are the production scheduler at a manufacturing company. You schedule estimated production orders and ensure that capacity is used efficiently.

You have an order that must be scheduled at the resource group level and scheduled backward from the delivery date specified on the production order.

You need to schedule the order.

Which scheduling parameters should you use? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 63

A manufacturer is implementing Dynamics 365 Supply Chain Management with warehouse management processes (WMS). Warehouse workers use hand-held devices to pick and stage batch-tracked products for production. The warehouse manager requires that products are removed from on-hand inventory and consumed when they are picked and staged for production. You need to remove the products from on-hand inventory.

What should you configure?

- A. mobile device menu item, start production order
- B. manufacturing execution, job card device
- C. flushing principle, start
- D. flushing principle, available at location

Answer: C

Explanation:

The flushing principle is a setting that determines how and when the raw materials are consumed from inventory and registered as work in progress (WIP) for production orders and batch orders¹. The flushing principle can be configured at the product level, the bill of materials (BOM) or formula line level, or the production order or batch order line level¹.

The Start flushing principle indicates that the material will be automatically consumed when the production order is started¹. The amount of material that is consumed is proportional to the quantity that is started. This principle is relevant if, for example, the variance in the consumption is low, the materials are low-value materials, there are no tracking requirements, or there's a short run time on operations¹.

In this scenario, the warehouse manager requires that products are removed from on-hand inventory and consumed when they are picked and staged for production. Therefore, the Start flushing principle should be configured for the batch-tracked products. This way, the products will be deducted from inventory and set to WIP as soon as the production order is started on the hand-held device.

NEW QUESTION # 64

A bicycle manufacturing company is implementing Dynamics 365 Supply Chain Management.

The warehouse must pick and stage parts other than paint for bicycle assembly. Paint is at the production station.

You need to configure the reservations for production.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation:

To configure the reservations for production, you should do the following:

* Define configuration for paint reservation: You should configure the Item model group for paint. The Item model group determines the inventory policies for an item, such as reservation, tracking, and costing¹. You can set the reservation policy for paint to FIFO date-controlled, which means that the inventory reservation is controlled by a sorting date according to the FIFO principle². You can also set the Backward from ship date option, which means that the inventory reservation is controlled by the last update physical date according to the FIFO rule².

* Define the reservation principle for paint: You should set the reservation principle to Start. This means that inventory is reserved when production starts³. This way, you can ensure that paint is available at the production station when needed

NEW QUESTION # 65

.....

Before you buy our product, you can download and try out it freely so you can have a good understanding of our MB-335 test prep. In such a way, the client can visit the page of our MB-335 exam questions on the website. So the client can understand our MB-335 Exam Materials well and decide whether to buy our MB-335 training guide or not since that they have checked the quality of our MB-335 exam questions. We provide the best MB-335 learning guide to our client and you will be satisfied.
