

300-540 - Designing and Implementing Cisco Service Provider Cloud Network Infrastructure—High Pass-Rate Brain Exam

DOWNLOAD the newest ActualTorrent 300-540 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1MK9r292rLRcD1bsrE3oJe0nQB0jaxSpy>

According to the statistic about candidates, we find that some of them take part in the Cisco exam for the first time. Considering the inexperience of most candidates, we provide some free trail for our customers to have a basic knowledge of the 300-540 exam guide and get the hang of how to achieve the 300-540 exam certification in their first attempt. You can download a small part of PDF demo, which is in a form of questions and answers relevant to your coming 300-540 Exam; and then you may have a decision about whether you are content with it. In fact, there are no absolutely right 300-540 exam questions for you; there is just a suitable learning tool for your practices. Therefore, for your convenience and your future using experience, we sincere suggest you to have a download to before payment.

Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.

Topic 2	<ul style="list-style-type: none"> • Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.
Topic 3	<ul style="list-style-type: none"> • Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR • MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.
Topic 4	<ul style="list-style-type: none"> • High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.
Topic 5	<ul style="list-style-type: none"> • Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.

Flexible 300-540 Testing Engine, 300-540 Free Sample Questions

Our company always feedbacks our candidates with highly-qualified 300-540 study guide and technical excellence and continuously developing the most professional 300-540 exam materials. You can see the high pass rate as 98% to 100%, which is unmatched in the market. What is more, our 300-540 Practice Engine persists in creating a modern service oriented system and strive for providing more preferential activities for your convenience.

Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q133-Q138):

NEW QUESTION # 133

How does log management assist in meeting the requirements of cloud security regulatory compliance?

- A. by boosting the security of cloud-based applications
- **B. by supporting documentation and reporting processes**
- C. by streamlining resource allocation across cloud environments
- D. by providing enhanced interoperability between cloud platforms

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Cisco SP Cloud Network Infrastructure Security Knowledge Cloud security compliance frameworks (such as ISO 27001, PCI-DSS, GDPR, SOC 2, HIPAA) require:

- * Evidence of security events
- * Retention of logs for audit periods
- * Ability to generate compliance reports
- * Traceability and accountability
- * Incident investigation support

Effective log management enables:

- * Centralized collection of application, network, and system logs
 - * Storage of logs for mandated retention periods
 - * Generation of audit-ready reports
 - * Documentation required for compliance assessments
 - * Demonstration that monitoring and security controls are active and functioning
- Therefore, the role of log management in regulatory compliance is primarily about documentation, traceability, auditing, and reporting, which aligns only with Option A.

The other options do not directly serve regulatory compliance requirements:

- * B relates to resource optimization, not compliance.
- * C refers to interoperability, which is unrelated to regulatory auditing.
- * D improves security but does not directly address compliance documentation.

NEW QUESTION # 134

NetFlow and IPFIX are protocols used for:

- A. Physical layer diagnostics
- B. Network configuration
- C. Data encryption
- D. Traffic analysis and monitoring

Answer: D

NEW QUESTION # 135

TLS and mTLS are protocols used for:

- A. Access control
- B. Traffic shaping
- C. Routing
- D. Encryption and secure communication

Answer: D

NEW QUESTION # 136

Onboarding VNF refers to:

- A. Removing VNFs from the network
- B. Monitoring VNF performance
- C. Updating VNFs to the latest version
- D. The initial setup and integration of VNFs into a network

Answer: D

NEW QUESTION # 137

Refer to the exhibit. An engineer must deploy a Layer 3 EVPN over segment routing MPLS in the data center core; however, Cisco switch Spine_A fails to join the OSPF network. Which OSPF command must be run on Spine_A to resolve the issue?

- A. address-family ipv4
- B. connected-prefix-sid-map
- C. segment-routing mpls
- D. otv join-interface loopback0

Answer: C

Explanation:

To run EVPN over Segment Routing MPLS (SR-MPLS), the IGP (here OSPF) must be enabled for segment routing so it can:

* Advertise Segment IDs (SIDs) for prefixes and links

* Carry SR extensions in OSPF LSAs

On Cisco devices, this is done under the OSPF process with:

```
router ospf 100
router-id 192.168.1.1
segment-routing mpls
```

Without the segment-routing mpls command, Spine_A will not participate correctly in the SR-enabled OSPF domain, and SR-related adjacencies/LSAs will not form as expected, resulting in failure to integrate into the intended SR-MPLS core.

The other options are not OSPF SR-enabling commands:

* A otv join-interface# OTV, unrelated to OSPF or SR-MPLS.

* B address-family ipv4# BGP address family, not OSPF.

* C connected-prefix-sid-map# Global SR mapping for connected prefixes but does not itself enable SR for OSPF.

Therefore, the correct command is segment-routing mpls (D).

NEW QUESTION # 138

.....

With all 300-540 practice questions being brisk in the international market, our 300-540 exam materials are quite catches with top-ranking quality. But we do not stop the pace of making advancement by following the questions closely according to exam. So our experts make new update as supplementary updates. So that our 300-540 study braindumps are always the latest for our loyal customers and we will auto send it to you as long as we update it.
