How Can You Crack the Fortinet FCP_GCS_AD-7.6 Exam with Flying Colors?

Web-based FCP - Google Cloud Security 7.6 Administrator (FCP_GCS_AD-7.6) practice exam is a convenient format to evaluate and improve preparation for the exam. It is a FCP_GCS_AD-7.6 browser-based application, which means you can access it from any operating system with an internet connection and a web browser. Unlike the desktop-based exam simulation software, the FCP - Google Cloud Security 7.6 Administrator (FCP_GCS_AD-7.6) browser-based practice test requires no plugins and software installation. It makes the Fortinet FCP_GCS_AD-7.6 online practice exam a perfect tool for those who do not want to go through complicated software installation on their device.

Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q25-Q30):

NEW QUESTION # 25

You have been tasked with destroying all resources relating to a recent active-active high-availability (HA) FGSP Terraform deployment in Google Cloud.

What steps do you have to take to ensure a successful deletion? (Choose two.)

- A. Use the command terraform plan before destroying the Terraform template.
- B. Delete all dependencies to resources relating to the Terraform template.
- C. Delete all resources manually because active-active HA clusters cannot be destroyed using Terraform.
- D. Use the command terraform destroy to delete all resources deployed by the Terraform template.

Answer: B,D

Explanation:

Removing dependencies prevents resource conflicts during deletion.

terraform destroy is the correct command to cleanly and completely remove all resources created by the Terraform deployment.

NEW QUESTION # 26

Refer to the exhibit.

Which action must the administrator take to route traffic from VPC B to VPC A?

- A. The administrator must configure a custom route in VPC B and point the gateway to the VPC peering service.
- B. The administrative must configure a custom route in VPC B and point the gateway to VPC A.
- C. The administrator must deploy a FortiGate VM with at least three network interfaces.
- D. The administrator must create a new VPC peering connection between VPC A and VPC B.

Answer: C

Explanation:

Because VPC peering is non-transitive, traffic cannot route from VPC B to VPC A via VPC C. To enable routing between VPC A and VPC B through VPC C, a FortiGate VM with multiple network interfaces can act as a firewall/router to manage traffic between the three VPCs.

NEW QUESTION # 27

A cloud administrator has been receiving reports of slow response times from users accessing their organization's web application, which is protected by FortiWeb Cloud.

Which two steps can be taken to potentially alleviate the problem? (Choose two.)

- A. Enabling the content delivery network (CDN).
- B. Adding additional passthrough load balancers.
- C. Changing the DNS records to point to the web application.
- D. Deploying FortiWeb Cloud in the same region where the web application is hosted.

Answer: A,D

Explanation:

Deploying FortiWeb Cloud closer to the web application reduces latency and improves response times.

Enabling CDN caches content closer to users, reducing load times and speeding up content delivery.

NEW QUESTION # 28

Your organization is deciding between deploying FortiGate active-passive high-availability (HA) in Google Cloud using either the software-defined network (SDN) connector or load balancers.

What two reasons should your organization choose the SDN connector over the load balancer deployment?

(Choose two.)

- A. The SDN connector supports multizone failover.
- B. Cost is lower.
- C. There is less administrative overhead.
- D. Failovers are faster because of to API calls.

Answer: B,C

Explanation:

Using the SDN connector avoids additional load balancer costs, making it more cost-effective.

The SDN connector enables multizone failover by directly managing network routing, which load balancers do not inherently support.

NEW QUESTION # 29

A cloud administrator is tasked with protecting web applications hosted in Google Cloud.

Which three cloud offerings can the administrator use to accomplish the task? (Choose three.)

- A. Google Cloud IAM
- B. Google Cloud Armor
- C. FortiWeb VM
- D. FortiWeb Cloud
- E. Google Cloud Run

Answer: B,C,D

Explanation:

FortiWeb VM is a web application firewall (WAF) deployed on Google Cloud to protect web apps.

Google Cloud Armor provides DDoS and application-level protection.

FortiWeb Cloud offers cloud-native WAF services to protect applications hosted in Google Cloud.

NEW QUESTION # 30

.....

Pass4training online digital Fortinet FCP_GCS_AD-7.6 exam questions are the best way to prepare. Using our FCP - Google Cloud Security 7.6 Administrator (FCP_GCS_AD-7.6) exam dumps, you will not have to worry about whatever topics you need to master. To practice for a Fortinet FCP_GCS_AD-7.6 Certification Exam in the software (free test), you should perform a self-assessment. The Fortinet FCP_GCS_AD-7.6 practice test software keeps track of each previous attempt and highlights the improvements with each attempt.
