주제	소개
주제 1	<ul style="list-style-type: none"><li>Sharing, Shadowing and Evolving: This section of the exam measures the skills of IT operations specialists and covers the collaborative and adaptive elements of DevOps in enterprise settings. It explores leadership, typical barriers and risks, and outlines how organisations can evolve their DevOps practices through continuous learning, peer shadowing, and experience-based transformation.</li></ul>

주제 2	<ul style="list-style-type: none"> <li>Core DevOps Principles: This section of the exam measures the skills of IT operations specialists and covers essential DevOps principles such as the Three Ways, the Theory of Constraints, and Chaos Engineering. It also introduces the concept of learning organisations, showing how systemic thinking supports continuous improvement.</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>Automation, Architecting DevOps Toolchains: This section of the exam measures the skills of IT operations specialists and covers key automation principles within the DevOps toolchain. It focuses on CI</li> <li>CD pipelines, Infrastructure as Code, containerisation, cloud-native architecture, platform engineering, and emerging technologies like Machine Learning and Generative AI in DevOps contexts.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>Measurement, Metrics, and Reporting: This section of the exam measures the skills of DevOps engineers and covers metrics that help monitor and evaluate the performance of DevOps practices. Topics include speed, quality, culture, change lead time, cycle time, and the use of dashboards, value-driven metrics, and AIOps in reporting and decision-making.</li> </ul>
주제 5	<ul style="list-style-type: none"> <li>Exploring DevOps: This section of the exam measures the skills of DevOps engineers and covers the foundations of DevOps, including its emergence as a critical discipline in the digital era. It introduces learners to the basic purpose, evolution, and significance of DevOps in modern software and infrastructure environments.</li> </ul>
주제 6	<ul style="list-style-type: none"> <li>Culture, Behaviours, Operating Models: This section of the exam measures the skills of DevOps engineers and covers how to assess and evolve organisational culture in relation to DevOps transformation. It includes concepts such as Cultural Debt, Behavioural Models, and Organisational Maturity, helping professionals understand team dynamics and readiness for change.</li> </ul>

### 최신 PeopleCert DevOps DevOps-Foundation 무료샘플문제 (Q68-Q73):

#### 질문 # 68

Which of the following could encourage the sharing of tools, knowledge, discoveries and lessons learned between development and operational teams?

- A. Simulations
- B. Common workspaces
- C. All of the above**
- D. Hackathons

정답: C

#### 설명:

PeopleCert outlines multiple methods to encourage sharing and collaboration:

- \* A: Common workspaces promote informal communication and rapid problem-solving.
- \* B: Hackathons provide an engaging environment for innovation, cross-functional teamwork, and sharing solutions.
- \* C: Simulations (e.g., Game Days) allow teams to practice scenarios, learn from each other, and share insights in a low-risk setting. Each of these fosters trust, transparency, and mutual learning. Using them together can amplify cultural change and skill growth. Thus, D-All of the above-is correct.

### 질문 #69

Which of the following metrics relates to The Third Way?

- A. Hypothesis or experiments log
- B. Change lead times
- C. Change fail rate
- D. Change cycle times

정답: A

#### 설명:

The Third Way in DevOps emphasizes continuous learning and experimentation. It's about fostering a culture where teams test hypotheses, take calculated risks, and learn from both successes and failures.

A hypothesis or experiments log directly supports this principle by capturing:

- \* The changes or experiments attempted
- \* The hypothesis behind them
- \* The results and insights gained

Metrics like A, B, and C are more aligned with the First Way (flow) and Second Way (feedback). They measure speed and stability but not the experimental learning process itself.

By tracking experiments, organizations can make data-driven decisions, reinforce a learning culture, and continuously refine practices—core aspects of the Third Way.

### 질문 #70

Who are the PRIMARY stakeholders for DevOps?

- A. Security and QA testers
- B. Business representatives
- C. Software engineers and operational teams
- D. All of the Above

정답: D

#### 설명:

In DevOps, success depends on collaboration between all key stakeholders across the software delivery value stream. This includes:

\* Software Engineers & Operations Teams: Responsible for designing, building, deploying, and maintaining applications and services.

\* Business Representatives: Define requirements, prioritize work, and ensure alignment with organizational goals.

\* Security and QA Testers: Ensure that quality, compliance, and security are built into the delivery pipeline from the start (shift-left approach).

PeopleCert emphasizes the idea of "BizDevOps" and "DevSecOps," highlighting the need for business, development, operations, and security to work as an integrated team. The removal of silos and the inclusion of all perspectives ensure that value is delivered faster and more reliably, while maintaining quality and compliance.

Choosing only one group would miss the cross-functional nature of DevOps. Hence, the correct answer is D - All of the Above.

### 질문 #71

Updates to a complex critical business service are released every calendar quarter. The business would like to increase the frequency of releases for this service.

Why would segmenting the service into microservices help to improve the frequency of release?

- A. Microservices create a service architecture built on smaller modules that can be updated independently without affecting

### the primary system

- B. Microservices can be built quickly to correct or remove errors in the primary system
- C. Microservices are less expensive and therefore can be built and released more frequently
- D. Microservices are always open source so they can be modified frequently to meet business requirements

정답: A

### 설명:

Microservices architecture breaks down applications into small, independent, loosely coupled services that can be developed, tested, and deployed independently.

\* Why does this improve release frequency? Each microservice can be updated, tested, and deployed on its own, reducing the risk and coordination overhead associated with monolithic releases.

\* This allows for faster feedback and more frequent delivery of value to users.

Extract-style reference:

"Microservices enable teams to deploy independently, reduce deployment risk, and increase release frequency by decoupling services."

### 질문 # 72

In the context of DevOps. which is an effective approach when selecting tools?

- A. Standardize on a single vendor's platform
- B. Focus on testing first
- C. Establish a toolchain
- D. Encourage both Dev and Ops individually select the best tools for their own needs

정답: C

### 설명:

The most effective approach to tool selection in DevOps is to establish a toolchain-a set of integrated tools that support the end-to-end lifecycle (planning, coding, building, testing, releasing, deploying, operating, and monitoring).

This encourages consistency, automation, and traceability, while still allowing flexibility for teams.

Why not standardize on one vendor?

This reduces flexibility, can cause vendor lock-in, and doesn't support the varied needs of Dev and Ops teams.

Encouraging independent selection (C) increases fragmentation.

Focusing solely on testing (D) ignores the broader lifecycle.

Extract-style reference:

"Establishing an integrated toolchain provides end-to-end visibility and automation across the software delivery pipeline, aligning tools with process and cultural change."

- State of DevOps Report; DevOps Handbook

PeopleCert DevOps Foundation v3.6: Recommends a toolchain approach for supporting collaborative DevOps practices.
