

# Palo Alto Networks CloudSec-Pro New Braindumps

## Ebook - Valid CloudSec-Pro Exam Fee

ActualTestsQuiz play the key role for assuring your success in Private Cloud Monitoring and Operations with CloudSec-Pro exam. We incline your interest towards professional way of learning; motivate you to execute your learned concepts in practical industry. No more exam phobia exists if you have devotedly prepared through our CloudSec-Pro Exam products, certain boost comes in your confidence level that routes you towards success pathway.

The learning material is open in three excellent formats, PDF, a desktop practice test, and a web-based practice test. Palo Alto Networks CloudSec-Pro Dumps is organized by experts while saving the furthest down-the-line plan to them for the Palo Alto Networks CloudSec-Pro Exam. The sans bug plans have been given to you all to drift through the Palo Alto Networks CloudSec-Pro certification exam.

## Valid Palo Alto Networks CloudSec-Pro Exam Fee | CloudSec-Pro Test Pattern

Our product boosts many advantages and varied functions to make your learning relaxing and efficient. The client can have a free download and tryout of our CloudSec-Pro exam torrent before they purchase our product and can download our study materials immediately after the client pay successfully. CloudSec-Pro exam question provides the free update and the discounts for the old client and our experts check whether our test bank has been updated on the whole day and if there is the update the system will send the update automatically to the client. Thus you can have an efficient learning and a good preparation of the exam. It is believed that our CloudSec-Pro latest question is absolutely good choices for you

## Palo Alto Networks Cloud Security Professional Sample Questions (Q249-Q254):

### NEW QUESTION # 249

A customer has a requirement to restrict any container from resolving the name www.evil-url.com

How should the administrator configure Prisma Cloud Compute to satisfy this requirement?

- A. Choose "copy into rule" for any Container, set www.evil-url.com as a blocklisted DNS name, and set the effect to prevent.
- B. Set www.evil-url.com as a blocklisted DNS name in the default Container runtime policy, and set the effect to block.
- C. Choose "copy into rule" for any Container, set www.evil-url.com as a blocklisted DNS name in the Container policy and set the policy effect to alert.
- D. Set www.evil-url.com as a blocklisted DNS name in the default Container policy and set the effect to prevent.

**Answer: D**

Explanation:

To restrict any container from resolving the name www.evil-url.com, the administrator should set www.evil- url.com as a blocklisted DNS name in the default Container policy and set the effect to prevent. This configuration in Prisma Cloud, or similar CSPM tools, ensures that any attempt to resolve the specified blocklisted DNS name within any container will be prevented, thus enhancing security by proactively blocking potential communication with known malicious domains.

Reference to this feature can be found in the documentation of CSPM tools that offer runtime protection for containers. These tools allow administrators to define security policies that can include DNS-based controls to prevent containers from accessing known malicious or undesirable URLs, thereby preventing potential data exfiltration, malware communication, or other security threats

### NEW QUESTION # 250

Which two fields are required to configure SSO in Prisma Cloud? (Choose two.)

- A. Identity Provider Logout URL
- B. Certificate
- C. Prisma Cloud Access SAML URL
- D. Identity Provider Issuer

**Answer: B,D**

Explanation:

Configuring Single Sign-On (SSO) in Prisma Cloud requires the Identity Provider Issuer (Option B) and Certificate (Option C). The Identity Provider Issuer is a unique identifier for the SSO identity provider and is used by Prisma Cloud to establish trust and validate SSO responses. The Certificate, typically an X.509 certificate, is used to sign SSO assertions and ensure the security of the SSO communication. The Prisma Cloud Access SAML URL (Option A) is provided by Prisma Cloud to configure the SSO on the identity provider's side, not the other way around. The Identity Provider Logout URL (Option D) is used for single logout configurations but is not a required field for basic SSO configuration in Prisma Cloud.

### NEW QUESTION # 251

Which two attributes of policies can be fetched using API? (Choose two.)

- A. policy mode
- B. policy violation
- C. policy signature
- D. policy label

**Answer: A,D**

Explanation:

Using the Prisma Cloud API, users can fetch various attributes of policies, including the policy label (Option A) and policy mode (Option C). The policy label helps in categorizing and organizing policies, while the policy mode determines how the policy is enforced (e.g., alert, enforce). The policy signature (Option B) is not a standard attribute exposed via the API for fetching, as it relates more to the internal identification and handling of policies. The policy violation (Option D) is an outcome or event resulting from a policy breach, not an attribute of the policy itself that can be fetched via the API.

## NEW QUESTION # 252

What are two ways to scan container images in Jenkins pipelines? (Choose two.)

- A. Jenkins Docker plugin
- B. **twistcli**
- C. Prisma Cloud Visual Studio Code plugin with Jenkins integration
- D. Compute Azure DevOps plugin
- E. **Compute Jenkins plugin**

**Answer: B,E**

Explanation:

To scan container images in Jenkins pipelines, two effective methods are using `twistcli` and the `Compute Jenkins` plugin. `twistcli` is a command-line tool provided by Prisma Cloud that allows for the scanning of container images for vulnerabilities and compliance issues directly from the CI/CD pipeline. It can be integrated into Jenkins jobs as a build or post-build step to automatically scan images as part of the build process.

The `Compute Jenkins` plugin is specifically designed for integration with Jenkins, providing a more seamless and automated way to include Prisma Cloud's security scanning capabilities within Jenkins pipelines. This plugin enables Jenkins to trigger image scans with Prisma Cloud directly and can fail builds based on scan results, ensuring that only secure and compliant images are pushed through the CI/CD pipeline.

Both `twistcli` and the `Compute Jenkins` plugin are designed to integrate Prisma Cloud's security capabilities into the CI/CD process, enabling DevOps teams to identify and fix security issues early in the development lifecycle.

## NEW QUESTION # 253

Which two variables must be modified to achieve automatic remediation for identity and access management (IAM) alerts in Azure cloud? (Choose two.)

- A. **API\_ENDPOINT**
- B. **YOUR\_ACCOUNT\_NUMBER**
- C. **SQS\_QUEUE\_NAME**
- D. **SB\_QUEUE\_KEY**

**Answer: A,D**

Explanation:

AZURE:

```
% export SB_QUEUE_KEY=your_sb_queue_key
% export SB_QUEUE_KEY_NAME=your_sb_queue_key_name
% export SB_QUEUE_NAME_SPACE=your_sb_queue_name_space
% export API_ENDPOINT=api_tenant
% export AUTH_KEY=your_jwt_token
