AZ-400 Valid Test Labs, AZ-400 Latest Exam Pdf

Today, in an era of fierce competition, how can we occupy a place in a market where talent is saturated? The answer is a certificate. What the certificate main? All kinds of the test AZ-400 certification, prove you through all kinds of qualification certificate, it is not hard to find, more and more people are willing to invest time and effort on the AZ-400 Exam Guide, because get the test AZ-400 certification is not an easy thing, so, a lot of people are looking for an efficient learning method. Our AZ-400 exam questions are the right tool for you to pass the AZ-400 exam.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q74-Q79):

NEW QUESTION # 74

You need to configure a cloud service to store the secrets required by the mobile applications to call the share.

What should you include in the solution? To answer, select the appropriate options in the answer area, NOTE:

Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system.

Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

NEW QUESTION # 75

You need to create a virtual machine template in an Azure DevTest Labs environment named az400-9940427-dtl1. The template must be based on Windows Server 2016 Datacenter. Virtual machines created from the template must include the selenium tool and the Google Chrome browser.

To complete this task, sign in to the Microsoft Azure portal.

- A.
 1. Open Microsoft Azure Portal
 2. Select All Services, and then select DevTest Labs in the DEVOPS section.
 -
 3. From the list of labs, select the az400-9940427-dtl1 lab
 4. On the home page for your lab, select + Add on the toolbar.
 5. You see the Azure Resource Manager template for creating the virtual machine.
 6. The JSON segment in the resources section has the definition for the image type you selected earlier.
- B.
 1. Open Microsoft Azure Portal
 2. Select All Services, and then select DevTest Labs in the DEVOPS section.
 -
 3. From the list of labs, select the az400-9940427-dtl1 lab
 4. On the home page for your lab, select + Add on the toolbar.
 5. Select the Windows Server 2016 Datacenter base image for the VM.
 6. Select automation options at the bottom of the page above the Submit button.
 7. You see the Azure Resource Manager template for creating the virtual machine.
 8. The JSON segment in the resources section has the definition for the image type you selected earlier.

Answer: B

NEW QUESTION # 76

You have an Azure Kubernetes Service (AKS) implementation that is RBAC-enabled. You plan to use Azure Container Instances as a hosted development environment to run containers in the AKS implementation.

You need to configure Azure Container Instances as a hosted environment for running containers in AKS.

Which three actions should you perform in sequence?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

□ Explanation:

□ Step 1: Create a YAML file.

If your AKS cluster is RBAC-enabled, you must create a service account and role binding for use with Tiller.

To create a service account and role binding, create a file named rbac-virtual-kubelet.yaml. Step 2: Run kubectl apply.

Apply the service account and binding with kubectl apply and specify your rbac-virtual-kubelet.yaml file.

Step 3: Run helm init.

Configure Helm to use the tiller service account:

```
helm init --service-account tiller
```

You can now continue to installing the Virtual Kubelet into your AKS cluster.

NEW QUESTION # 77

You need to replace the existing DevOps tools to support the planned changes.

What should you use? To answer, drag the appropriate tools to the correct targets. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 78

You have an Azure Kubernetes Service (AKS) pod.

You need to configure a probe to perform the following actions:

- * Confirm that the pod is responding to service requests.
- * Check the status of the pod four times a minute.
- * Initiate a shutdown if the pod is unresponsive.

How should you complete the YAML configuration file? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: readiness Probe:

For containerized applications that serve traffic, you might want to verify that your container is ready to handle incoming requests. Azure Container Instances supports readiness probes to include configurations so that your container can't be accessed under certain conditions.
