The Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) web-based practice questions carry the above-mentioned notable features of the desktop-based software. This version of TopExamCollection's Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) practice questions works on Mac, Linux, Android, iOS, and Windows. Our customer does not need troubling plugins or software installations to attempt the web-based Oracle in 1z0-1075-25 Practice Questions. Another benefit is that our Oracle 1z0-1075-25 online mock test can be taken via all browsers, including Chrome, MS Edge, Internet Explorer, Safari, Opera, and Firefox.

It is not easy for you to make a decision of choosing the 1z0-1075-25 prep guide from our company, because there are a lot of study materials about the exam in the market. However, if you decide to buy the 1z0-1075-25 test practice files from our company, we are going to tell you that it will be one of the best decisions you have made in recent years. As is known to us, the 1z0-1075-25 Preparation materials from our company are designed by a lot of famous experts and professors in the field. There is no doubt that the 1z0-1075-25 prep guide has the high quality beyond your imagination.

>> 1z0-1075-25 Valid Real Exam <<

1z0-1075-25 Reliable Test Vce | Exam 1z0-1075-25 Labs

Our company has authoritative experts and experienced team in related industry. To give the customer the best service, all of our

1z0-1075-25 exam dump is designed by experienced experts from various field, so our 1z0-1075-25 Learning materials will help to better absorb the test sites. One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time. At the same time, our 1z0-1075-25 exam dumps discard the most traditional rote memorization methods and impart the key points of the qualifying exam in a way that best suits the user's learning interests, this is the highest level of experience that our most authoritative think tank brings to our 1z0-1075-25 Study Guide users. Believe that there is such a powerful expert help, our users will be able to successfully pass the qualification test to obtain the qualification certificate.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q13-Q18):

NEW QUESTION # 13

In a Manufacturing Cloud implementation, users are finding it difficult to track information about work orders executed across various work centers.

Which three information types in the Work Order Traveler can help users in this situation?

- A. Reservation against sales orders
- B. Hard pegging of items
- C. Item on-hand quantity
- D. Product serial information
- E. Work definition details

Answer: A,D,E

Explanation:

The Work Order Traveler in Oracle Manufacturing Cloud provides detailed information about work orders to help users track and manage work orders across various work centers. The following types of information are especially useful:

* Work definition details (D) : This provides detailed information about the operations and resources required to complete the work order, helping users understand the manufacturing process and requirements.

* Product serial information (E) : Tracking serial numbers for products is critical, especially in industries where traceability and product lifecycle management are important.

* Reservation against sales orders (A) : This information links work orders to specific sales orders, providing clarity on how the work order aligns with customer demand.

Incorrect options:

* Hard pegging of items (B) and Item on-hand quantity (C) are not typically tracked through the Work Order Traveler report, as this report focuses more on the work order 's execution rather than inventory management.

Oracle Manufacturing Cloud documentation on the Work Order Traveler report explains the different types of information provided to help users track work orders and manage production.

NEW QUESTION # 14

Two work definitions are created in the application: one for Engine Finished Good and the other for Pallet Finished Good. The Engine Finished Good item should have Pallet Finished Good as one of its components.

How can you establish the relationship between the Pallet and Engine work definitions?

- A. Create a subinventory to serve as the completion subinventory for yielding Pallet, and then use the same subinventory to serve as the supply subinventory of Pallet in the work definition created for Engine.
- B. Work definition versions can be used to tie the work orders.
- C. Assign a higher priority to the work definition created for Engine and a lower one to the work definition for Pallet.
- D. The two work definitions can be tied through Project or Selban numbers.

Answer: A

Explanation:

To establish a relationship between the work definitions of Engine Finished Good and Pallet Finished Good, you can create a common subinventory. This subinventory will serve as the completion subinventory for the Pallet Finished Good and the supply subinventory for the Engine Finished Good. This ensures that the Pallet Finished Good is completed in one process and is then available as a component for the Engine Finished Good.

* Subinventory Linking : Using a common subinventory ties the output from one work definition as an input to another. The Pallet becomes an inventory item that is consumed in the production of the Engine.

Oracle Manufacturing Cloud 's documentation on work definitions and inventory setups explains how subinventories are used to link different stages of production.

NEW QUESTION # 15

Your customer runs production 24 x 7 x 365 and wants to track Overall Equipment Effectiveness (OEE) online. Which key setup can they use to achieve this?

- A. Enable IoT Production Monitoring and turn on " Enable synchronization to IoT Production Monitoring " In Inventory Organization.
- B. Enable IoT Fleet Monitoring and enable synchronization to IoT Production Monitoring in Plant Parameters.
- C. Enable IoT Production Monitoring and turn on " Enable synchronization to IoT Production
- D. Enable IoT Asset Monitoring and turn on " Enable synchronization to IoT Asset Monitoring " In Plant Parameters.
- E. Enable IoT Asset Monitoring and turn on " Enable synchronization to IoT Asset Monitoring " in Resources.

Answer: A

Explanation:

To track Overall Equipment Effectiveness (OEE) in real-time, Oracle Manufacturing Cloud can integrate with IoT solutions. The correct setup involves:

* Enabling IoT Production Monitoring and turning on synchronization to IoT Production Monitoring in the Inventory Organization . This allows real-time data from the shop floor to be captured, processed, and used to monitor equipment effectiveness, performance, and availability.

Incorrect options:

* IoT Fleet Monitoring (A) and IoT Asset Monitoring (B, D) focus on tracking assets and fleets, which are more relevant for logistics or asset management, not production monitoring for OEE.

Oracle Cloud documentation on IoT Production Monitoring details how to set up the system to track OEE and integrate production data with IoT capabilities.

NEW QUESTION # 16

Which three actions can a supervisor perform to annul or correct mistakes in a completed work order, committed by a user while entering work order details?

- A. Reverse from Scrap to Ready.
- B. Correct the Product entered at work order.
- C. Reverse a Closed order to Open.
- D. Reverse the product at the last operation.
- E. Reverse at an operation.

Answer: A,D,E

Explanation:

If a mistake is made in a completed work order , supervisors have the ability to perform certain corrective actions to reverse transactions or correct errors:

* Reverse from Scrap to Ready (C) : This action allows the supervisor to reverse a product that was incorrectly marked as scrap back to a ready state, making it available for further operations.

* Reverse at an operation (D) : If the mistake occurred during a specific operation, the supervisor can reverse the transaction at that operation and correct the mistake.

* Reverse the product at the last operation (E) : The supervisor can reverse a transaction at the last operation to make corrections to the final product before closing the work order.

Incorrect options:

* A (Reverse a Closed order to Open) : Once a work order is closed, it cannot be reopened. Reversing transactions must happen before the order is officially closed.

* B (Correct the Product entered at work order) : The product specified in a work order cannot be changed once the order has been processed and completed.

Oracle Cloud documentation on Work Order Reversal Transactions explains the capabilities for reversing scrap, operation, and product entries to correct errors in work orders.

NEW QUESTION # 17

The pick release of a project work order creates movement requests with the project and the task from the work order. Which statement is NOT true about this?

- A. The expenditure type, expenditure date, and expenditure organization are derived when the work-in- process material issue or work-in-process material pick transactions are interfaced to Costing.
- B. The expenditure type for the item is derived based on the Default Expenditure Type attribute in Inventory Management. The picks for the work order are grouped by project costing, project, and task using pick slip grouping rules.
- C. The expenditure type and the expenditure organization from the work order are not referenced onto the shop floor movement requests.
- D. The expenditure type and the expenditure organization from the work order are referenced onto the shop floor movement requests.

Answer: C

Explanation:

When pick release creates movement requests for project-based work orders, there are several key points regarding expenditure information:

* Statement D : The expenditure type and the expenditure organization from the work order are not referenced onto the shop floor movement requests - This statement is correct because the expenditure type and organization are not typically included in the shop floor movement requests. These requests focus more on the material movement aspects, while expenditure details are managed elsewhere in the system.

Oracle Cost Management documentation clarifies that shop floor movement requests handle inventory and material flow, and expenditure information is derived later in the process, not directly tied to these requests.

Incorrect Statements:

Statement A : The expenditure type, date, and organization are derived when interfacing with Costing, which ensures that project-related costs are tracked accurately.

Statement B : The expenditure type for the item is derived based on the default expenditure type in Inventory Management, which is true for how items are picked for a work order.

Statement C : Expenditure type and organization from the work order are referenced in costing, but not directly on movement requests.

NEW QUESTION # 18

.....

With the rapid development of IT technology, the questions in the IT certification exam are also changing. Therefore, TopExamCollection also keeps updating test questions and answers. And if you purchase TopExamCollection Oracle 1z0-1075-25 Practice Test materials, we will provide you with free updates for a year. As long as the questions updates, TopExamCollection will immediately send the latest questions and answers to you which guarantees that you can get the latest materials at any time. TopExamCollection can not only help you pass the test, but also help you learn the latest knowledge. Never pass up a good chance to have the substantial materials.
