

New Launch UiPath-ADAv1 Questions [2026] - UiPath UiPath-ADAv1 Exam Dumps

BTW, DOWNLOAD part of RealVCE UiPath-ADAv1 dumps from Cloud Storage: <https://drive.google.com/open?id=1HLFdsodxC1upQQatDiEwNTcK5GSCEIK3>

Our company has established a long-term partnership with those who have purchased our UiPath-ADAv1 exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam. We will inform you that the UiPath-ADAv1 Study Materials should be updated and send you the latest version in a year after your payment. We will also provide some discount for your updating after a year if you are satisfied with our UiPath-ADAv1 exam prepare.

Now on the Internet, a lot of online learning platform management is not standard, some web information may include some viruses, cause far-reaching influence to pay end users and adverse effect. If you purchase our UiPath-ADAv1 test torrent this issue is impossible. We hire experienced staff to handle this issue perfectly. We are sure that our products and payment process are surely safe and anti-virus. If you have any question about downloading and using our UiPath-ADAv1 Study Tool, we have professional staff to remotely handle for you immediately, let users to use the UiPath Automation Developer Associate v1 Exam guide torrent in a safe environment, bring more comfortable experience for the user.

UiPath UiPath-ADAv1 Exam | UiPath-ADAv1 Reliable Study Plan - Easy to Pass UiPath-ADAv1: UiPath Automation Developer Associate v1 Exam Exam

This is a good way to purchase valid exam preparation materials for your coming UiPath-ADAv1 test. Good choice will make you get double results with half efforts. Good exam preparation will point you a clear direction and help you prepare efficiently. Our UiPath-ADAv1 exam preparation can not only give a right direction but also cover most of the real test questions so that you can know the content of exam in advance. You can master the questions and answers of UiPath UiPath-ADAv1 Exam Preparation, even adjust your exam mood actively.

UiPath Automation Developer Associate v1 Exam Sample Questions (Q250-Q255):

NEW QUESTION # 250

When a developer runs a process using the REFramework, with the process utilizing Orchestrator queues and a queue already created with the Name provided and the Auto Retry function disabled, which states will be executed without errors?

- A. Initialization -> Get Transaction Data -> End Process
- B. Initialization -> End Process
- C. Initialization -> Get Transaction Data -> Process Transaction -> End Process
- D. Initialization -> Process Transaction -> End Process

Answer: C

Explanation:

Explanation

The REFramework is a template that provides a structured and consistent way to develop automation processes using state machines. The REFramework has four main states: Initialization, Get Transaction Data, Process Transaction, and End Process. Each state performs a specific function and transitions to another state based on the outcome. When a developer runs a process using the REFramework, with the process utilizing Orchestrator queues and a queue already created with the Name provided and the Auto Retry function disabled, the following states will be executed without errors:

Initialization: This state is used to initialize the application, read the configuration data, and log in to Orchestrator. If the initialization is successful, the state transitions to Get Transaction Data; otherwise, it transitions to End Process. (UiPath ReFramework documentation1) **Get Transaction Data:** This state is used to retrieve a transaction item from the Orchestrator queue and assign it to a variable. If there is a transaction item available, the state transitions to Process Transaction; otherwise, it transitions to End Process. (UiPath ReFramework documentation1) **Process Transaction:** This state is used to execute the business logic for the current transaction item and handle any exceptions that may occur. If the transaction is successful, the state updates the status of the transaction item to Successful and transitions to Get Transaction Data; if the transaction fails due to a business exception, the state updates the status of the transaction item to Failed and transitions to Get Transaction Data; if the transaction fails due to a system exception, the state updates the status of the transaction item to Failed and retries the transaction based on the MaxRetryNumber parameter from the Config file. If the retry limit is reached, the state transitions to End Process; otherwise, it transitions to Get Transaction Data. (UiPath ReFramework documentation1) **End Process:** This state is used to close all applications, log out of Orchestrator, and terminate the process. This state does not have any transition. (UiPath ReFramework documentation1)

NEW QUESTION # 251

A developer needs to create a repetitive process in the REFramework. Following the best practices, which action(s) should be performed to defend against potential robot crashes such as "out of memory"?

- A. All "Invoke Workflow File" activities from the Main.xaml file should be marked with the Isolated option.
- B. Build a script that compares current CPU usage values to a threshold and clears data as needed.
- C. After every transaction, clear the transaction data, close the applications, and re-open the applications.
- D. Add a "Clear Collection" activity at the beginning of the Process.xaml workflow.

Answer: C

Explanation:

The REFramework is a template that helps developers create robust and reliable automation processes. It follows the best practices of error handling, logging, and retry mechanisms. One of the best practices is to clear the transaction data, close the applications, and re-open the applications after every transaction. This helps to avoid potential robot crashes such as "out of memory" by freeing up the memory and resources used by the applications. It also ensures that the applications are in a consistent state for the next transaction.

NEW QUESTION # 252

When choosing a process for automation, what factor contributes to its increased complexity?

- A. Low number of steps required in the automation.

- B. Low number of decision points.
- **C. Unstructured input data source.**
- D. Standard desktop applications.

Answer: C

Explanation:

Unstructured input data sources significantly contribute to the complexity of an automation process, making option A correct. Unstructured data is more challenging to interpret and process, requiring more sophisticated methods for data extraction and handling, thus increasing the complexity of the automation. Standard desktop applications (option B), a low number of decision points (option C), and a low number of steps (option D) typically reduce complexity.

NEW QUESTION # 253

In the context of the REFramework, if the OrchestratorQueueName key is present in both the Settings and Assets sheets, but an asset with the corresponding name is not present in Orchestrator, what will be the behavior at run time?

- A. The flow will throw an exception in InitAllSettings workflow.
- B. An empty string will be saved for the "OrchestratorQueueName" key in the config dictionary.
- **C. The flow will use the value from the Settings sheets since the asset is missing.**
- D. The "OrchestratorQueueName" key is not added to the config dictionary and the flow will throw in Get Transaction Data workflow.

Answer: C

Explanation:

The REFramework template is a robust and scalable framework for building RPA projects¹. It uses a config file to store the settings and constants that are used throughout the project². The config file has two sheets:

Settings and Assets. The Settings sheet contains the key-value pairs that are read by the InitAllSettings workflow and stored in the config dictionary. The Assets sheet contains the names of the assets that are stored in Orchestrator and need to be retrieved by the InitAllApplications workflow. The OrchestratorQueueName key is used to specify the name of the queue that is used to store the transaction items for the process. If the OrchestratorQueueName key is present in both the Settings and Assets sheets, but an asset with the corresponding name is not present in Orchestrator, the behavior at run time will be as follows:

The InitAllSettings workflow will read the value of the OrchestratorQueueName key from the Settings sheet and store it in the config dictionary.

The InitAllApplications workflow will try to retrieve the asset with the name OrchestratorQueueName from Orchestrator using the Get Asset activity. Since the asset does not exist, the activity will throw an exception.

The exception will be caught by a Try Catch block and handled by a Log Message activity with level Warning and message "Asset not found: OrchestratorQueueName".

The flow will continue with the next asset in the Assets sheet or move to the next state if there are no more assets.

The flow will use the value of the OrchestratorQueueName key from the config dictionary whenever it needs to access or update the queue.

Therefore, option B is correct. Option A is incorrect because the exception is thrown in InitAllApplications workflow, not InitAllSettings workflow. Option C is incorrect because an empty string is not saved for the OrchestratorQueueName key in the config dictionary. Option D is incorrect because the OrchestratorQueueName key is added to the config dictionary and the flow does not throw in Get Transaction Data workflow.

NEW QUESTION # 254

What is the correct method to check how many resources are utilized in a personal workspace in UiPath Orchestrator?

- A. Navigate to Tenant > Folders, click the Personal Workspaces tab, and then click Manage Resources for the desired workspace.
- B. Navigate to Tenant > Users, click the Personal Workspaces tab, and then click Resources for the desired workspace.
- C. Navigate to Tenant > Folders, click the All Workspaces tab, and then click Check Resources for the desired workspace.
- **D. Navigate to Tenant > Folders, click the Personal Workspaces tab, and then click See Usage for the desired workspace.**

Answer: D

Explanation:

Explanation

To check how many resources are utilized in a personal workspace in UiPath Orchestrator, you can use the See Usage option that displays the current consumption of resources for each workspace. You can also see the total number of resources allocated to all personal workspaces in your tenant. (Orchestrator - Personal Workspaces - UiPath Academy)
