## Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q52-Q57):

### NEW QUESTION # 52

An administrator must restrict endpoints from certain countries from connecting to FortiSASE. Which configuration can achieve this?

- A. Configure source IP anchoring to restrict access from the specified countries.
- **B. Configure geofencing to restrict access from the required countries.**
- C. Configure a geography address object as the source for a deny policy.
- D. Configure a network lockdown policy on the endpoint profiles.

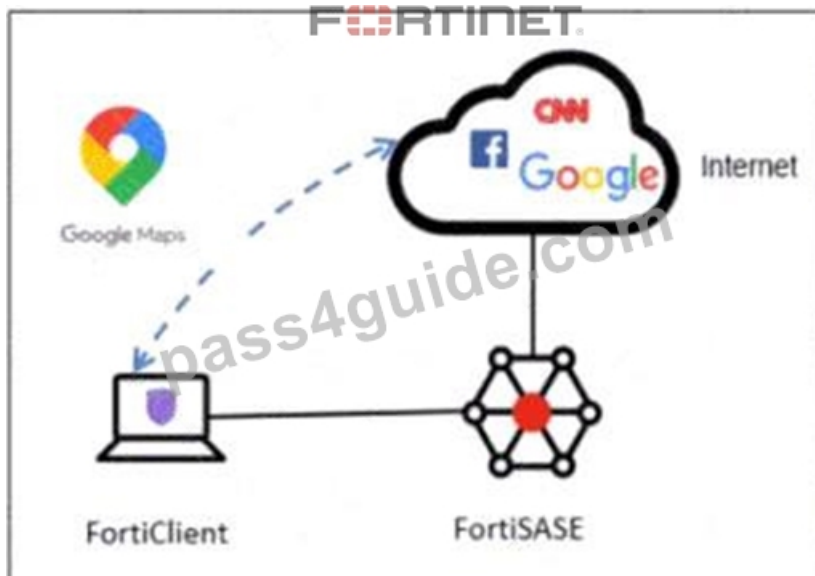

**Answer: B**

Explanation:

Geofencing allows the administrator to restrict or allow access to FortiSASE services based on the geographic location of the endpoints, effectively blocking connections from specified countries.

### NEW QUESTION # 53

Refer to the exhibit.

A company has a requirement to inspect all the endpoint internet traffic on FortiSASE, and exclude Google Maps traffic from the FortiSASE VPN tunnel and redirect it to the endpoint physical Interface.

Which configuration must you apply to achieve this requirement?

- A. Exempt the Google Maps FQDN from the endpoint system proxy settings.
- B. Configure a static route with the Google Maps FQDN on the endpoint to redirect traffic
- C. Change the default DNS server configuration on FortiSASE to use the endpoint system DNS.
- **D. Configure the Google Maps FQDN as a split tunneling destination on the FortiSASE endpoint profile.**

**Answer: D**

Explanation:

To meet the requirement of inspecting all endpoint internet traffic on FortiSASE while excluding Google Maps traffic from the FortiSASE VPN tunnel and redirecting it to the endpoint's physical interface, you should configure split tunneling. Split tunneling

allows specific traffic to bypass the VPN tunnel and be routed directly through the endpoint's local interface.

\* Split Tunneling Configuration:

\* Split tunneling enables selective traffic to be routed outside the VPN tunnel.

\* By configuring the Google Maps Fully Qualified Domain Name (FQDN) as a split tunneling destination, you ensure that traffic to Google Maps bypasses the VPN tunnel and uses the endpoint's local interface instead.

\* Implementation Steps:

\* Access the FortiSASE endpoint profile configuration.

\* Add the Google Maps FQDN to the split tunneling destinations list.

\* This configuration directs traffic intended for Google Maps to bypass the VPN tunnel and be routed directly through the endpoint's physical network interface.

#### NEW QUESTION # 54

Which information does FortiSASE use to bring network lockdown into effect on an endpoint?

- A. The number of critical vulnerabilities detected on the endpoint
- **B. The security posture of the endpoint based on ZTNA tags**
- C. The connection status of the tunnel to FortiSASE
- D. Zero-day malware detection on endpoint

**Answer: B**

Explanation:

FortiSASE enforces network lockdown based on ZTNA posture evaluation, using endpoint security posture tags to determine compliance status. If the endpoint does not meet defined posture requirements, access is restricted through network lockdown enforcement.

#### NEW QUESTION # 55

Which two benefits come from integrating SoCaaS with FortiSASE? (Choose two.)

- **A. Continuous threat monitoring of all connected endpoints**
- **B. Centralized visibility of all threat events**
- C. Provides bandwidth usage analytics
