As the talent competition increases in the labor market, it has become an accepted fact that the Generative-AI-Leader certification has become an essential part for a lot of people, especially these people who are looking for a good job, because the certification can help more and more people receive the renewed attention from the leader of many big companies. So it is very important for a lot of people to gain the Generative-AI-Leader certification. We must pay more attention to the certification and try our best to gain the Generative-AI-Leader Certification. First of all, you are bound to choose the best and most suitable study materials for yourself to help you prepare for your exam. Now we would like to introduce the Generative-AI-Leader certification guide from our company to you. We sincerely hope that our study materials will help you through problems in a short time.

On the basis of the current social background and development prospect, the Generative-AI-Leader certifications have gradually become accepted prerequisites to stand out the most in the workplace. But it is not easy for everyone to achieve their Generative-AI-Leader certification since the Generative-AI-Leader Exam is quite difficult and takes time to prepare for it. Our Generative-AI-Leader exam materials are pleased to serve you as such an exam tool to win the exam at your first attempt. If you don't believe it, just come and try!

Valid Exam Generative-AI-Leader Book | Generative-AI-Leader Exam Objectives

After so many years' development, our Google Cloud Certified exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our Generative-AI-Leader guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine. CertkingdomPDF have most professional team to compiled and revise Generative-AI-Leader Exam Question. In order to try our best to help you pass the exam and get a better condition of your life and your work, our team worked day and night to complete it. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of our practice materials that you can pass the exam easily, this is simply unimaginable.

Google Cloud Certified - Generative AI Leader Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

A software developer needs a highly efficient, open-source large language model that can be fine-tuned on a local machine for rapid prototyping of a chatbot application. They require a model that offers strong performance in natural language understanding and generation, while being lightweight enough to run on limited hardware. Which Google-developed family of models should they use?

- A. Gemini
- B. Imagen
- C. Veo
- D. **Gemma**

Answer: D

Explanation:

Gemma is Google's family of lightweight, state-of-the-art open models, built from the same research and technology used to create the Gemini3 models. They are designed for developers to build innovative AI applications on their local machines or in the cloud, offering a balance of performance and efficiency suitable for limited hardware and rapid prototyping. Veo is for video generation, Gemini is typically larger and more general-purpose, and Imagen is for image generation.

NEW QUESTION # 27

A global news company is using a large language model to automatically generate summaries of news articles for their website. The model's summary of an international summit was accurate until it hallucinated by stating a detail that did not occur. How should the company overcome this hallucination?

- A. Fine-tune the model on a larger dataset of news articles.
- B. Implement stricter safety settings to filter out potentially controversial topics.
- C. **Use grounding to base the model output on the source articles.**
- D. Increase the temperature setting of the model to encourage more diverse outputs.

Answer: C

Explanation:

The core problem is the model's hallucination—it invented a factual detail in a context (news reporting) where factual accuracy is non-negotiable. To correct a factual error in a generative summary, the model must be constrained to speak only based on verifiable facts from a reliable source.

The most effective technique to combat hallucinations and ensure factual adherence is Grounding (D). Grounding connects the Large Language Model's (LLM's) output to a specific, trusted, and verifiable source of information. This is often implemented using Retrieval-Augmented Generation (RAG). In this scenario, grounding the summary model on the original source articles ensures that every generated statement is directly entailed by the provided facts (the source article content).

Option B, fine-tuning, is expensive and only updates the model's general knowledge and style; it does not prevent the model from guessing or fabricating details when retrieving information. Option C, increasing temperature, would make the output less consistent and more diverse, likely increasing the chance of hallucination, which is the opposite of the desired effect. Option A is unrelated to factual accuracy. Therefore, Grounding is the necessary step to anchor the model's responses to the true content of the source articles.

(Reference: Google Cloud documentation on RAG/Grounding emphasizes that its primary purpose is to address the "knowledge cutoff" and hallucination issues of LLMs by retrieving relevant, up-to-date information from external knowledge sources and using this retrieved information to ground the LLM's generation, ensuring factual accuracy.)

NEW QUESTION # 28

A development team is building an internal knowledge base chatbot to answer employee questions about company policies and procedures. This information is stored across various documents in Google Cloud Storage and is updated regularly by different departments. What is the primary benefit of using Google Cloud's RAG APIs in this scenario?

- A. They automatically create summaries of all company policies, which are then presented to employees as quick answers.
- B. **They enable the generative AI model to retrieve the most up-to-date and relevant information from the policy documents in real-time.**
- C. They allow the development team to train a single foundation model on all company documents.
- D. They provide a pre-built user interface for the chatbot, simplifying the front-end development process.

Answer: B

Explanation:

The primary benefit of RAG (Retrieval-Augmented Generation) in this context is its ability to ensure the chatbot provides accurate and up-to-date information. By retrieving relevant and recent policy documents from Cloud Storage in real-time and then grounding

the LLM's response with this information, the chatbot avoids hallucinating or providing outdated answers, which is crucial for an internal knowledge base.

NEW QUESTION # 29

A learning and development team wants to quickly create a new hire training video with a custom avatar and voiceover that matches their company's branding and key messaging. They did not receive any money to spend on the production. What should they do?

- A. Create a video with Google Vids.
- B. Generate the video frames with Imagen.
- C. Prompt the Gemini app to create a video.
- D. Train a model with Vertex AI and produce a video.

Answer: A

Explanation:

The scenario requires quick creation of a training video using a custom avatar and voiceover while adhering to zero cost for production.

Google Vids is an AI-powered video creation app (part of Google Workspace/Gemini features) designed to make video creation accessible for teams without the overhead of traditional production. It specifically offers features like AI avatars and voiceovers for content such as trainings, demos, and onboarding videos. This directly addresses the need for a low-cost, fast solution for a new hire training video with custom branding elements (custom avatars and voiceovers are a key feature of the tool).

Option A, Imagen, is a Google foundation model specialized for image generation, not the creation of structured, narrated training videos with avatars. Option B, using the Gemini app, is primarily for text, code, and multimodal chat/generation, and is not the dedicated Google application for video production. Option C, training a model with Vertex AI, is a highly technical, time-consuming, and expensive endeavor that violates the need for a quick and zero-cost solution. Therefore, using the purpose-built, gen AI-enabled Google Vids application is the correct and most efficient choice.

NEW QUESTION # 30

A large e-commerce company with a vast and frequently updated product catalog finds that customers struggle to find products on their website, and support agents spend too much time finding detailed product information. The company wants to improve search accuracy and efficiency for both customers and support. What Google Cloud solution should they use?

- A. Vertex AI Natural Language API
- B. Pre-built RAG with Vertex AI Search
- C. Vertex AI Model Garden
- D. Vertex AI Conversation

Answer: B

Explanation:

This scenario strongly points to the need for accurate and up-to-date information retrieval from a product catalog. Pre-built RAG (Retrieval-Augmented Generation) combined with Vertex AI Search is the ideal solution. Vertex AI Search can index the product catalog, and RAG can then use this indexed data to ground the responses of a generative AI model, ensuring that both customer searches and support agent queries retrieve precise and relevant product information.

NEW QUESTION # 31
