2026 Latest Associate-Cloud-Engineer Exam Discount: Unparalleled Google Associate Cloud Engineer Exam 100% Pass Quiz

There are three different versions of our Associate-Cloud-Engineer exam questions: the PDF, Software and APP online. You can choose the version of Associate-Cloud-Engineer training guide according to your interests and habits. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study Associate-Cloud-Engineer training engine anytime and anyplace for the convenience these three versions bring.

Google Associate Cloud Engineer certification exam covers a broad range of topics, including Google Cloud Platform services, infrastructure, networking, security, and application development. Associate-Cloud-Engineer Exam is designed to test your ability to deploy, manage, and monitor applications and services on the Google Cloud Platform, as well as your ability to troubleshoot issues and optimize performance.

Google Associate Cloud Engineer Exam Sample Questions (Q170-Q175):

NEW QUESTION # 170

You need a dynamic way of provisioning VMs on Compute Engine. The exact specifications will be in a dedicated configuration file. You want to follow Google's recommended practices. Which method should you use?

- A. Cloud Composer
- B. Unmanaged Instance Group
- C. Managed Instance Group
- **D. Deployment Manager**

Answer: D

Explanation:

Google Cloud Deployment Manager allows you to specify all the resources needed for your application in a declarative format using yaml. You can also use Python or Jinja2 templates to parameterize the configuration and allow reuse of common deployment paradigms such as a load balanced, auto-scaled instance group. Treat your configuration as code and perform repeatable deployments.

NEW QUESTION # 171

You have been asked to create robust Virtual Private Network (VPN) connectivity between a new Virtual Private Cloud (VPC) and a remote site. Key requirements include dynamic routing, a shared address space of 10.19.0.1/22, and no overprovisioning of tunnels during a failover event. You want to follow Google-recommended practices to set up a high availability Cloud VPN. What should you do?

- **A. Use an automatic mode VPC network, use Cloud Router border gateway protocol (BGP) routes and configure policy-based routing**
- B. Use a custom mode VPC network, configure static routes, and use active/passive routing
- C. Use a custom mode VPC network use Cloud Router border gateway protocol (86P) routes, and use active/passive routing
- D. Use an automatic mode VPC network, configure static routes, and use active/active routing

Answer: A

NEW QUESTION # 172

You've deployed a microservice called myapp1 to a Google Kubernetes Engine cluster using the YAML file specified below:

You need to refactor this configuration so that the database password is not stored in plain text.

You want to follow Google-recommended practices. What should you do?

- A. Store the database password in a file inside a Kubernetes persistent volume, and use a persistent volume claim to mount the volume to the container.
- **B. Store the database password inside a ConfigMap object.
Modify the YAML file to populate the DB_PASSWORD environment variable from the ConfigMap.**
- C. Store the database password inside a Secret object.
Modify the YAML file to populate the DB_PASSWORD environment variable from the Secret.
- D. Store the database password inside the Docker image of the container, not in the YAML file.

Answer: B

NEW QUESTION # 173

You want to find out when users were added to Cloud Spanner Identity Access Management (IAM) roles on your Google Cloud Platform (GCP) project. What should you do in the GCP Console?

- **A. Go to the Stackdriver Logging console, review admin activity logs, and filter them for Cloud Spanner IAM roles.**
- B. Open the Cloud Spanner console to review configurations.
- C. Open the IAM & admin console to review IAM policies for Cloud Spanner roles.
- D. Go to the Stackdriver Monitoring console and review information for Cloud Spanner.

Answer: A

NEW QUESTION # 174

You want to configure a solution for archiving data in a Cloud Storage bucket. The solution must be cost-effective. Data with multiple versions should be archived after 30 days. Previous versions are accessed once a month for reporting. This archive data is also occasionally updated at month-end. What should you do?

- A. Add a bucket lifecycle rule that archives data from regional storage after 30 days to Coldline Storage.
- **B. Add a bucket lifecycle rule that archives data with newer versions after 30 days to Nearline Storage.**
- C. Add a bucket lifecycle rule that archives data with newer versions after 30 days to Coldline Storage.
- D. Add a bucket lifecycle rule that archives data from regional storage after 30 days to Nearline Storage.

Answer: B
