当社MogiExamは、無料の更新サービスに添付されているCOH-285練習資料のすべてのバージョンをコミットしました。COH-285試験準備に新しい更新がある場合、カスタマーサービススタッフから最新バージョンが送信されます。したがって、最高のサービスとCOH-285実践教材を提供するペースを止めることはありません。そして、お支払い前に品質を確認するためのCOH-285学習教材の無料デモを提供します。数万人の候補者がCOH-285学習教材を使用して学習能力を育成し、間違いなくその1つになることができます。

## Cohesity COH-285 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"><li>• <b>Configure NetBackup:</b> This section of the exam measures the skills of system administrators and focuses on the configuration tasks required to set up and manage a NetBackup environment. It covers the setup of primary, media, and client settings along with essential host properties, including the use of security certificates. The section explains how to configure disk storage, cloud storage, and storage unit groups to support stable backup operations. It also includes the configuration of standard and advanced backup policies and protection plans. Candidates are expected to understand specialized backup solutions such as synthetic backups, True Image Restore, multiple data streams, checkpoint restart, and different duplication methods that involve storage lifecycle policies, disk staging, and replication features.</li></ul>
トピック 2	<ul style="list-style-type: none"><li>• <b>Tune NetBackup:</b> This section of the exam measures skills of system engineers and focuses on analyzing performance related factors in a NetBackup environment. It introduces performance assessment and optimization practices to help candidates identify bottlenecks and improve overall efficiency. Tuning NetBackup includes making adjustments that lead to more stable and faster backup and recovery operations.</li></ul>
トピック 3	<ul style="list-style-type: none"><li>• <b>Monitor and Maintain NetBackup:</b> This section of the exam measures skills of operations personnel and focuses on the monitoring and maintenance tasks necessary to keep a NetBackup environment healthy. The topics include the core concepts of image management and the use of the NetBackup Administration Console to verify images, expire them, import backup data, and perform manual duplication. The section explains how to manage both disk and cloud storage within NetBackup and highlights the use of reports for verification and monitoring. It also covers administrative controls for running, cancelling, suspending, resuming, and prioritizing backup or duplication jobs. Candidates learn how to initiate and monitor restore operations and understand the security management features such as role based access control and host ID certificates.</li></ul>

- Troubleshoot NetBackup: This section of the exam measures skills of NetBackup administrators and focuses on resolving issues that occur during backup and recovery operations. It covers the interpretation of status codes and job details to diagnose failed jobs. The section also explains how to troubleshoot devices and media and how to validate connectivity between primary servers, media servers, and client systems. Candidates learn to address common problems in disaster recovery situations, including tasks related to recovering the NetBackup catalog.

時間とお金の集まりより正しい方法がもっと大切です。CohesityのCOH-285試験のために勉強していますなら、MogiExamの提供するCohesityのCOH-285試験ソフトはあなたの選びの最高です。我々の目的はあなたにCohesityのCOH-285試験に合格することだけです。試験に失敗したら、弊社は全額で返金します。我々の誠意を信じてください。あなたが順調に試験に合格するように。

## Cohesity Certified Protection Professional - NetBackup Appliances 認定 COH-285 試験問題 (Q108-Q113):

### 質問 # 108

An administrator wants to back up a large file system with millions of files using either the NetBackup Accelerator feature or the NetBackup FlashBackup feature.

Which consideration is irrelevant when determining which feature to be used?

- A. the file system storage capacity
- B. the type of file system being used
- C. the file system change rate
- **D. the file system folder depth**

正解: D

解説:

The irrelevant consideration is the file system folder depth. When selecting between NetBackup Accelerator and NetBackup FlashBackup for a file system containing millions of files, the key design factors are capacity, file-count/metadata handling, change processing, policy support, and file system/platform compatibility-not how deeply folders are nested. Cohesity documents that Accelerator performs an initial full backup and creates a track log, then identifies changed data by comparing track-log information against file-system information for each file; on NTFS/ReFS it can also use the Windows change journal. Cohesity also states that Accelerator track-log sizing is relative to file system size and number of backup files, with sizing formulas based on number of files and used disk space-not directory depth. FlashBackup is documented as combining raw-partition backup speed with individual file restore, and the FlashBackup/FlashBackup- Windows policy types are platform-specific, making the type of file system/client platform relevant. Storage capacity is also relevant because FlashBackup size reporting uses the mounted Windows disk volume or UNIX raw disk partition size. References/topics: Accelerator operation, track-log sizing, FlashBackup policy types, and large file-system backup planning.

### 質問 # 109

What are the different types of updates that can be installed on a NetBackup appliance?

- A. VxUpdate
- B. Security patch
- C. Firmware update
- **D. All of the above**
- E. EEB

正解: D

### 質問 # 110

Which command should an administrator use to view the expiry date of the local host-ID based certificate?

- A. nbcertcmd -hostSelfCheck
- **B. nbcertcmd -listCertDetails**
- C. bpcIntcmd -listEnrollmentStatus
- D. nbcertcmd -listCACertDetails

正解: B

解説:

The correct command is nbcertcmd -listCertDetails. Cohesity NetBackup documentation states that host ID- based certificate details can be viewed with the NetBackup web UI, the nbcertcmd command, or NetBackup APIs. In the command procedure, Cohesity specifically instructs administrators to run nbcertcmd - listCertDetails on the NetBackup host to view host IDs and associated certificate details for that host. The NetBackup Commands Reference also confirms that nbcertcmd is the utility used to request and manage host ID-based security certificates on NetBackup hosts, including primary servers, media servers, and clients. It lists -listCertDetails as the operation that displays certificate details for security certificates deployed on the NetBackup host. Option A is incorrect because -listCACertDetails displays trusted CA certificate details, not the local host-ID certificate expiry. Option B is invalid in this context because enrollment status is not viewed with bpcIntcmd. Option C, -hostSelfCheck, checks whether the host certificate is revoked, not its expiration date. Reference topics: NetBackup Security and Encryption Guide, Viewing host ID-based certificate details, and nbcertcmd command reference.

### 質問 # 111

Which NetBackup components can be updated with VxUpdate?

- A. only clients
- **B. media servers and clients**
- C. only media servers
- D. media servers and primary servers

正解: B

解説:

The correct answer is media servers and clients. Cohesity NetBackup documentation defines VxUpdate as a deployment-management mechanism for updating non-primary NetBackup hosts. The official NetBackup Upgrade Guide states that "VxUpdate provides a policy-based upgrade tool for media servers and clients," and further explains that the policy format simplifies media server and client upgrades while signed packages are added to the VxUpdate repository on the primary server for later deployment. Cohesity's Repository management topic reinforces this by stating that the VxUpdate repository resides on the primary server and contains packages that can be deployed to media servers and clients. It also explicitly says that administrators can upgrade NetBackup media servers and clients to a newer NetBackup version with VxUpdate. Therefore, option D is correct. Option A is incorrect because the primary server hosts the VxUpdate repository and controls deployment, but it is not itself upgraded through VxUpdate deployment policies. Option B and option C are incomplete because VxUpdate is not limited to only one of those host roles. Reference topics: NetBackup Deployment Management with VxUpdate, About VxUpdate, and Repository management.

### 質問 # 112

An administrator has a backup for client Linux1 using the LinuxClients policy complete successfully. Even though the policy Backup Selections are NOT modified, the backup job fails the next day with the following status code:

Error 71: none of the files in the file list exist.

What is a possible reason the job failed?

- A. The client was added to another backup policy.
- B. The "Enable granular recovery" option was unset.
- **C. The file systems have been unmounted on the client.**
- D. The client was temporarily shut down.

正解: C
