## 2026 Useful C\_S4PM\_2504 Exam Voucher | SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects 100% Free Exam Collection Pdf

Three versions of C\_S4PM\_2504 study materials will be offered by us. Each one has its own advantage, you can pick the proper one for yourself. We also have free demo for you, you can have a look at and decide which version you want to choose. We also have the live chat service and the live off chat service to answer all questions you have. If you failed to pass the exam, money back will be guaranteed, if you have another exam to attend, we will replace another C\_S4PM\_2504 Study Materials for you freely.

### SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Sample Questions (Q74-Q79):

#### NEW QUESTION # 74

You have assigned a deployment target in SAP Central Business Configuration, but have not yet completed the Confirm Scoping milestone. Which of the following tasks can you complete? Note: There are 2 correct answers to this question.

- A. Assign a different deployment target.
- B. Define the group currency.
- C. Create a company code.
- D. Rename the deployment target.

**Answer: B,D**

Explanation:

SAP Central Business Configuration (CBC) is used to configure organizational structures and scope items for SAP S/4HANA Cloud Public Edition. The Confirm Scoping milestone marks the completion of scoping decisions, after which certain configurations are locked.

\* Option A: Rename the deployment target. Correct. Before the Confirm Scoping milestone, the deployment target can be renamed in CBC. The SAP Central Business Configuration Guide states, "The deployment target can be renamed or adjusted prior to the Confirm Scoping milestone to align with project requirements."

\* Option B: Assign a different deployment target. Incorrect. Assigning a different deployment target after one has been selected is restricted before Confirm Scoping, as it requires significant reconfiguration. The CBC Guide notes, "Once a deployment target is assigned, changing it requires administrative intervention and is not supported before scoping confirmation."

\* Option C: Create a company code. Incorrect. Creating a company code is a configuration task that occurs after the Confirm Scoping milestone, as it depends on finalized scoping decisions. The SAP S/4HANA Cloud Implementation Guide explains, "Company code creation is part of the configuration phase, post-scoping."

\* Option D: Define the group currency. Correct. Defining the group currency is a preliminary task that can be completed before Confirm Scoping to establish financial settings. The CBC Guide confirms,

"Group currency can be defined early in the CBC process to support financial scoping." Extract from Official Documentation:

\* SAP Central Business Configuration Guide (<https://help.sap.com>): "Tasks such as renaming the deployment target and defining the group currency are available before the Confirm Scoping milestone, allowing flexibility in initial setup."

\* SAP S/4HANA Cloud Implementation Guide: "The Confirm Scoping milestone locks certain configurations, but preliminary tasks like group currency definition can be completed earlier." Additional Context:

The flexibility to rename the deployment target and define the group currency before Confirm Scoping allows project teams to refine their setup without impacting downstream configurations.

SAP S/4HANA Cloud Implementation Guide: Details CBC milestones.  
SAP Activate Methodology: Outlines scoping and configuration tasks.

### NEW QUESTION # 75

In SAP Cloud ALM, which attributes can be used to categorize features? Note: There are 3 correct answers to this question.

- A. Release
- B. Workstream
- C. Risk level
- D. Deliverable
- E. Tags

**Answer: A,B,E**

Explanation:

SAP Cloud ALM is the central tool for managing implementation projects for SAP S/4HANA Cloud Public Edition, including feature management. Features represent requirements or functionalities, and categorizing them with specific attributes enhances project organization and traceability.

\* Option A: Risk level Incorrect. While risk management is part of SAP Cloud ALM, risk level is not a standard attribute for categorizing features. The SAP Cloud ALM Documentation states, "Risks are managed separately in SAP Cloud ALM, but features are categorized using attributes like workstream, tags, and release, not risk level."

\* Option B: Workstream Correct. Workstreams, such as Project Management or Solution Adoption, are used to group features by functional area. The SAP Cloud ALM Implementation Guide explains, "Features in SAP Cloud ALM can be categorized by workstream to align them with specific project areas, ensuring clarity in task allocation and progress tracking."

\* Option C: Tags Correct. Tags are flexible labels used to categorize features for custom grouping or filtering. The SAP Cloud ALM Documentation notes, "Tags are a versatile attribute in SAP Cloud ALM, allowing users to categorize features based on project-specific criteria, such as priority or process type."

\* Option D: Deliverable Incorrect. Deliverables are outcomes or artifacts in SAP Cloud ALM, but they are not used as attributes to categorize features. The SAP Cloud ALM Implementation Guide clarifies, "Features are linked to deliverables but are not categorized by them; instead, attributes like workstream and tags are used."

\* Option E: Release Correct. Features are categorized by release to align them with deployment timelines. The SAP Cloud ALM Documentation confirms, "The release attribute in SAP Cloud ALM categorizes features according to the planned deployment cycle, ensuring alignment with project milestones." Extract from Official Documentation:

\* SAP Cloud ALM Implementation Guide (SAP Help Portal, <https://help.sap.com>): "Features in SAP Cloud ALM are categorized using attributes such as workstream, tags, and release to ensure effective organization and alignment with project objectives and deployment schedules."

\* SAP Cloud ALM Documentation (SAP Community, <https://community.sap.com>): "To manage features effectively, SAP Cloud ALM uses attributes like workstream for functional grouping, tags for flexible categorization, and release for deployment planning, enhancing project visibility and control." Additional Context:

Categorizing features in SAP Cloud ALM supports agile project management by enabling teams to filter, prioritize, and track requirements efficiently. Workstreams align features with project areas, tags provide custom flexibility, and releases ensure synchronization with deployment cycles, all critical for managing complex cloud implementations.

### NEW QUESTION # 76

Why would you use level 3 Business Driven Configuration Questionnaires (BDCQs)?

- A. To validate customer scopes and requirements against SAP S/4HANA Cloud Public Edition best practices
- B. To validate customer scopes during Fit-To-Standard workshops and provide the required configuration values for the Realize phase.
- C. They build a consolidated backlog during the Realize phase

**Answer: B**

### NEW QUESTION # 77

Why are non-standard scope items activated in the starter system when implementing SAP S/4HANA Cloud Public Edition?

- A. To review the functional scope as identified for the customer's solution
- B. To comply with SAP's licensing requirements for cloud implementations
- C. To enable the system to automatically detect and resolve data inconsistencies
- D. To automatically migrate legacy data to the development instance

Answer: A

### NEW QUESTION # 78

What can you do with the SAP for Me mobile app? Note: There are 2 correct answers to this question.

- A. Get full transparency into your SAP product portfolio
- B. Access the SAP ONE Support Launchpad
- C. Interact with SAP easily
- D. Download learning content from SAP Learning Hub

Answer: A,C

### NEW QUESTION # 79
