AZ-204 Pass4sure Vce - AZ-204 Latest Torrent & AZ-204 Study Guide

Checking our AZ-204 free demo is a great way of learning the pattern of exam materials and if it suits what you wanted. There are

valid AZ-204 test questions and accurate answers along with the professional explanations in our study guide. All real questions just need to practice one or two days and remember the answers will save you much time in AZ-204 Real Exam. Come and join us.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q35-Q40):

NEW QUESTION # 35
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.
You are developing and deploying several ASP.Net web applications to Azure App Service. You plan to save session state information and HTML output. You must use a storage mechanism with the following requirements:
* Share session state across all ASP.NET web applications
* Support controlled, concurrent access to the same session state data for multiple readers and a single writer
* Save full HTTP responses for concurrent requests
You need to store the information.
Proposed Solution: Add the web applications to Docker containers. Deploy the containers. Deploy the containers to Azure Kubernetes Service (AKS).
Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:
Instead use Azure Cache for Redis.
Note: Azure Cache for Redis provides a session state provider that you can use to store your session state in-memory with Azure Cache for Redis instead of a SQL Server database. To use the caching session state provider, first configure your cache, and then configure your ASP.NET application for cache using the Azure Cache for Redis Session State NuGet package.
References:
https://docs.microsoft.com/en-us/azure/azure-cache-for-redis/cache-aspnet-session-state-provider

NEW QUESTION # 36
You are developing an ASP.NET Core website that uses Azure FrontDoor. The website is used to build custom weather data sets for researchers. Data sets are downloaded by users as Comma Separated Value (CSV) files. The data is refreshed every 10 hours. Specific files must be purged from the FrontDoor cache based upon Response Header values.
You need to purge individual assets from the Front Door cache.
Which type of cache purge should you use?

- A. wildcard
- B. root domain
- C. single path

Answer: C

NEW QUESTION # 37
You need to retrieve the database connection string.
Which values should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

https://docs.microsoft.com/en-us/rest/api/keyvault/getsecret/getsecret

NEW QUESTION # 38

You have to build a web application that would be deployed onto Azure. The web application would not allow anonymous access. The authentication would be carried out via Azure AD.

The application needs to above by the following requirements

- Users must be able to log into the web application using their Azure
AD credentials
- The personalization of the web application must be based on the
membership in Active Directory groups

You have to configure the application manifest file:

Which of the following would go into Slot 2?

- A. "oauth2Permissions"
- B. "oauth2AllowImplicitFlow"
- C. "allowPublicClient"
- D. "requiredResourceAccess"

Answer: A

Explanation:
The "oAuth2Permissions" is used for web API permissions
The Microsoft documentation mentions the following:

Option A is incorrect since this is used to specify a fallback application type.
Option C is incorrect since this is used to provide a list of permission scopes and app roles that an application requires from a specified resource.
Option D is incorrect since this is used for single page applications.
https://docs.microsoft.com/en-us/azure/active-directory/develop/reference-app-manifest

NEW QUESTION # 39

You have a Linux container-based console application that uploads image files from customer sites all over the world. A back-end system that runs on Azure virtual machines processes the images by using the Azure Blobs API.
You are not permitted to make changes to the application.
Some customer sites only have phone-based internet connections.
You need to configure the console application to access the images.
What should you use?

- A. Azure Disks
- B. Azure Files
- C. Azure Storage Network File System (NFS) 3.0 support
- D. Azure BlobFuse

Answer: D

NEW QUESTION # 40
