SAP Certified Associate - SAP Business Data Cloud 認定 C-BCBDC-2505 試験問題 (Q31-Q36):

質問 # 31

What scripting language is used in the advanced story interface?

Please choose the correct answer.

Response:

- A. JavaScript
- B. Python
- C. HTML5

正解: A

質問 # 32

What are some features of the out-of-the-box reporting with intelligent applications in SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. Services for transforming and enriching data
- B. AI-based suggestions for intelligent applications in the SAP Business Data Cloud Cockpit
- C. Manual creation of artifacts across all involved components
- D. Automated data provisioning from business application to dashboard

正解: A、D

解説:

The out-of-the-box reporting capabilities with intelligent applications in SAP Business Data Cloud (BDC) are designed to streamline the analytical process and deliver immediate value. Two significant features include automated data provisioning from business application to dashboard. This means that intelligent applications handle the end-to-end flow of data, from its source in operational systems, through processing in BDC, and finally to visualization in dashboards, with minimal manual intervention. This automation ensures timely and consistent data delivery for reporting. Additionally, these intelligent applications leverage services for transforming and enriching data. As part of the pre-built logic within these applications, data is automatically transformed (e.g., aggregated, filtered) and enriched (e.g., adding calculated KPIs, combining with master data) to make it immediately suitable for reporting and analysis. This reduces the need for manual data manipulation by users, providing ready-to-consume insights.

質問 # 33

質問 # 35

What source system can you connect to with an SAP Analytics Cloud live connection that is provided by SAP BDC?

- A. SAP ERP
- B. SAP SuccessFactors
- **C. SAP Datasphere**
- D. SAP Business ByDesign Analytics

正解: C

解説:

Within the context of SAP Business Data Cloud (BDC), the primary and most central source system for an SAP Analytics Cloud (SAC) live connection is SAP Datasphere. SAP Datasphere serves as the comprehensive data foundation for SAP's business data fabric, integrating data from various SAP and non-SAP sources, and providing a harmonized, semantically rich data layer. SAP BDC is built upon and extends the capabilities of SAP Datasphere, making it the strategic hub for analytics and data management. Therefore, to ensure data consistency, governance, and real-time access to the integrated and harmonized business data managed within the BDC ecosystem, SAP Datasphere is the recommended and primary live connection source for SAC. While SAC can connect to other SAP systems like S/4HANA or BW, within the specific architecture of SAP BDC, SAP Datasphere plays the pivotal role as the integrated data platform.
