Pass Appian ACD201 Exam with PassQuestion ACD201 questions and answers in the first attempt.

<https://www.passquestion.com/>

1 / 5

Our practice exams are designed solely to help you get your ACD201 certification on your first try. A Appian ACD201 practice test will help you understand the exam inside out and you will get better marks overall. It is only because you have practical experience of the exam even before the exam itself. Itcerttest offers authentic and up-to-date study material that every candidate can rely on for good preparation. Our top priority is to help you pass the Appian Senior Developer (ACD201) exam on the first try. The key to passing the ACD201 exam on the first try is vigorous practice. And that's exactly what you'll get when you prepare from our material. Each format excels in its own way and helps you get success on the first attempt.

## Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.</li> </ul>

## ACD201 Flexible Testing Engine - 100% Valid Questions Pool

Each format of the Appian Certification Exams not only offers updated exam questions but also additional benefits. A free trial of the Appian Senior Developer (ACD201) exam dumps prep material before purchasing, up to 1 year of free updates, and a money-back guarantee according to terms and conditions are benefits of buying Appian Senior Developer (ACD201) real questions today. A support team is also available 24/7 to answer any queries related to the Appian ACD201 exam dumps.

### Appian Senior Developer Sample Questions (Q41-Q46):

#### NEW QUESTION # 41

You're performing System Integration Testing on a client's application that integrates with an external system. In this instance, you're testing the application's interactions with external integrations to ensure that data is being handled correctly between the two systems. However, this step has been done manually and is time-consuming. What should you do to make this process more efficient?

- A. Utilize FitNesse for Appian to perform automated functional testing on the workflows that include integrated systems through a defined set of test cases.
- B. Utilize Appian-Locust to develop and execute performance tests on the systems integrations by scripting a scenario where multiple users are interacting with the external systems simultaneously.
- C. Utilize the Postman API Platform to test the integrations with the external system and Appian's web APIs through a defined set of test cases.

#### Answer: A

Explanation:

FitNesse for Appian is designed for automated functional testing of Appian workflows, including those that call external integrations. By building repeatable FitNesse test scripts that drive the end-to-end process, you can automatically verify that data is correctly sent to - and returned from - the external system each time, greatly reducing the manual effort of system-integration testing.

#### NEW QUESTION # 42

You have designed a three-step 'Wizard' form interaction using user input tasks in the process model. The second step of the Wizard must utilize another process model which contains a user input task inside.

Which two methods should be implemented for a seamless Wizard-like interaction for the user? (Choose two.)

- A. Enable activity chaining between all nodes in the second process model, and activity chain between all user input tasks.
- B. Enable activity-chaining between all nodes on the main process model.
- C. Use a subprocess to call the second process model.
- D. Use the Start Process smart service to call the second process model.

#### Answer: B,C

Explanation:

Enabling activity-chaining between all nodes on the main process model ensures the wizard steps flow seamlessly for the user. Using a subprocess to call the second process model allows the main process to incorporate its user input task as part of the wizard flow with activity-chaining support.

#### NEW QUESTION # 43

An insurance application has a dashboard in which all the cases with "Accident" case type and "Health Insurance" insurance type are displayed to the user, using the following query:

```
!query{
  logicalExpression: !queryLogicalExpression(
    operator: "AND",
    filters: {
      !queryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"
      ),
      !queryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"
      )
    },
    pagingInfo: !pagingInfo(
      startIndex: 1,
      batchSize: 10,
      sort: !sortInfo(
        field: "createdDate"
      )
    )
  )
}
```

You need to update the query entity to display all the cases that are "Accident" case type and "Health Insurance" insurance type, or created in the last ten days.

What is the right configuration for the logical expression?

```
!queryLogicalExpression(
  operator: "AND",
  filters: {
    !queryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    !queryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  },
  logicalExpressions: !queryLogicalExpression(
    operator: "OR",
    filters: !queryFilter(
      field: "createdDate",
      value: today() - 10,
      operator: ">=",
    )
  )
)
```

- A.

```
alqueryLogicalExpression(
  operator: "OR",
  filters: alqueryFilter(
    field: "createdDate",
    value: today() - 10,
    operator: ">="),
  logicalExpressions: alqueryLogicalExpression(
    operator: "AND",
    filters: {
      alqueryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"),
      alqueryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"),
    }
  )
)
```

• B.

```
a!queryLogicalExpression
  operator: "AND",
  filters: [
    a!queryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    a!queryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    ),
    a!queryFilter(
      field: "createdDate",
      value: today() - 10,
      operator: ">=",
    )
  ]
}
```

• C

**Answer: B**

### Explanation:

A filter for `createdDate >= today() - 10` (records created in the last 10 days).

A nested AND logical expression that requires both caseType = "Accident" and insuranceType = "Health Insurance".

## NEW QUESTION # 44

You're building a new application to track job applications for a local health club.

The owner wants to have one group of individuals perform the initial application review for completeness, a second group to manage the interview process, and a third group to make the actual hiring decisions.

Which design element should be implemented to best support a memory efficient application?

- A. Break up the application into subprocesses representing each of the different stages of the process to reduce memory use.
- B. Create a synchronous process that accurately tracks a candidate's application from start to finish to ensure the hiring group has access to all the information necessary to make a decision.
- C. Create an entity-backed record for each of the open positions.

Answer: A

#### Explanation:

Breaking up the application into subprocesses for each stage allows each part to be short-lived and releases memory as each subprocess completes, resulting in a more memory-efficient application.

#### NEW QUESTION # 45

You're designing a file upload process that integrates with an external document management system.

Part of this process is to develop a start form with a file upload component, so that the user can upload multiple files.

The business has requested that the maximum file size that can be uploaded through this process is 1GB.

Additionally, you're aware that the integration's API can accept files with a maximum file size of 3GB, but recommends no larger than 1GB.

Can the process be more performant without straining the application or integration?

- A. Yes. Request the business reconsiders its requirements and find manual workarounds as it is not recommended to upload files of this size in both Appian and the integration.
- B. No. The file upload component is capable of accepting 1 GB files and the integration can handle this.
- C. Yes. Request the business allows for these files to be uploaded as an overnight process by storing large files in a staging table, so that adequate resources are available.

#### Answer: C

#### Explanation:

While Appian and the integration technically support 1 GB file uploads, handling such large files during interactive sessions can negatively impact application performance, user experience, and resource utilization.

A better approach is to request that the business allow these files to be uploaded asynchronously (e.g., overnight batch process), by temporarily storing them (e.g., in a staging table or folder) and processing them when system load is lower. This makes the process more performant and reliable without straining Appian or the external system.

#### NEW QUESTION # 46

.....

Facing the incoming Appian ACD201 Exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark. Preparation of exam without effective materials is just like a soldier without gun.
