## New CIPM Test Book - Exam CIPM Cram Questions

Actual4Exams is an excellent source of information on IT Certifications. In the Actual4Exams, you can find study skills and learning materials for your exam. Actual4Exams's IAPP CIPM training materials are studied by the experienced IT experts. It has a strong accuracy and logic. To encounter Actual4Exams, you will encounter the best training materials. You can rest assured that using our IAPP CIPM Exam Training materials. With it, you have done fully prepared to meet this exam.

The IAPP CIPM Exam is offered in English, French, German, Spanish, Portuguese, Italian, and Japanese. It is delivered in a testing center or remotely through a proctored online platform. Candidates who wish to take the exam remotely must have a reliable internet connection, a webcam, and a quiet, private location.

## IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q219-Q224):

**NEW QUESTION # 219**
SCENARIO
Please use the following to answer the next QUESTION:

As the Director of data protection for Consolidated Records Corporation, you are justifiably pleased with your accomplishments so far. Your hiring was precipitated by warnings from regulatory agencies following a series of relatively minor data breaches that could easily have been worse. However, you have not had a reportable incident for the three years that you have been with the company. In fact, you consider your program a model that others in the data storage industry may note in their own program development. You started the program at Consolidated from a jumbled mix of policies and procedures and worked toward coherence across departments and throughout operations. You were aided along the way by the program's sponsor, the vice president of operations, as well as by a Privacy Team that started from a clear understanding of the need for change.

Initially, your work was greeted with little confidence or enthusiasm by the company's "old guard" among both the executive team and frontline personnel working with data and interfacing with clients. Through the use of metrics that showed the costs not only of the breaches that had occurred, but also projections of the costs that easily could occur given the current state of operations, you soon had the leaders and key decision-makers largely on your side. Many of the other employees were more resistant, but face-to-face meetings with each department and the development of a baseline privacy training program achieved sufficient "buy-in" to begin putting the proper procedures into place.

Now, privacy protection is an accepted component of all current operations involving personal or protected data and must be part of the end product of any process of technological development. While your approach is not systematic, it is fairly effective.

You are left contemplating:

What must be done to maintain the program and develop it beyond just a data breach prevention program? How can you build on your success?

What are the next action steps?

How can Consolidated's privacy training program best be further developed?

- A. Through a review of recent data breaches.
- B. Through targeted curricula designed for specific departments.
- C. By adopting e-learning to reduce the need for instructors.
- D. By using industry standard off-the-shelf programs.

**Answer: B**

Explanation:
This would allow Consolidated to tailor the privacy training to the specific needs and risks of each department, and to ensure that the employees are aware of the relevant policies and procedures for their roles.

## NEW QUESTION # 220

In which situation would a Privacy Impact Assessment (PIA) be the least likely to be required?

- A. If a company created a credit-scoring platform five years ago.
- B. If an after-school club processed children's data to determine which children might have food allergies.
- C. If a social media company created a new product compiling personal data to generate user profiles.
- D. If a health-care professional or lawyer processed personal data from a patient's file.

**Answer: A**

Explanation:
A Privacy Impact Assessment (PIA) is a process that helps to identify and mitigate the privacy risks of a project or activity that involves personal data. A PIA is usually required when there is a new or significant change in the way personal data is collected, used, or disclosed. Therefore, a PIA would be the least likely to be required if a company created a credit-scoring platform five years ago, as this would not be a new or significant change. The other situations involve new or changed processing of personal data that could have privacy impacts, such as sensitive data (health or children's data), profiling data (user profiles), or large-scale data (patient's file). References: CIPM Study Guide, page 30; Guide to undertaking privacy impact assessments.

## NEW QUESTION # 221

When supporting the business and data privacy program expanding into a new jurisdiction, it is important to do all of the following EXCEPT?

- A. Perform an assessment of the laws applicable in that new jurisdiction.
- B. Consider culture and whether the privacy framework will need to account for changes in culture.
- C. Appoint a new Privacy Officer (PO) for that jurisdiction.
- D. Identify the stakeholders.

**Answer: C**

Explanation:
Explanation
When expanding into a new jurisdiction, it is not necessary to appoint a new Privacy Officer (PO) for that jurisdiction, unless the local law requires it. The other options are important steps to ensure compliance with the new jurisdiction's privacy laws and regulations, as well as to align the privacy program with the business objectives and culture of the new market. References: CIPM Body of Knowledge, Domain I: Privacy Program Governance, Task 1: Establish the privacy program vision and strategy.

## NEW QUESTION # 222
SCENARIO
Please use the following to answer the next QUESTION:
Manasa is a product manager at Omnipresent Omnimedia, where she is responsible for leading the development of the company's flagship product, the Handy Helper. The Handy Helper is an application that can be used in the home to manage family calendars, do online shopping, and schedule doctor appointments.
After having had a successful launch in the United States, the Handy Helper is about to be made available for purchase worldwide.
The packaging and user guide for the Handy Helper indicate that it is a "privacy friendly" product suitable for the whole family, including children, but does not provide any further detail or privacy notice. In order to use the application, a family creates a single account, and the primary user has access to all information about the other users. Upon start up, the primary user must check a box consenting to receive marketing emails from Omnipresent Omnimedia and selected marketing partners in order to be able to use the application.
Sanjay, the head of privacy at Omnipresent Omnimedia, was working on an agreement with a European distributor of Handy Helper when he fielded many Questions about the product from the distributor. Sanjay needed to look more closely at the product in order to be able to answer the Questions as he was not involved in the product development process.
In speaking with the product team, he learned that the Handy Helper collected and stored all of a user's sensitive medical information for the medical appointment scheduler. In fact, all of the user's information is stored by Handy Helper for the additional purpose of creating additional products and to analyze usage of the product. This data is all stored in the cloud and is encrypted both during transmission and at rest.
Consistent with the CEO's philosophy that great new product ideas can come from anyone, all Omnipresent Omnimedia employees have access to user data under a program called Eureka. Omnipresent Omnimedia is hoping that at some point in the future, the data will reveal insights that could be used to create a fully automated application that runs on artificial intelligence, but as of yet, Eureka is not well-defined and is considered a long-term goal.
What administrative safeguards should be implemented to protect the collected data while in use by Manasa and her product management team?

- A. Implement a policy restricting data access on a "need to know" basis.
- B. Document the data flows for the collected data.
- C. Limit data transfers to the US by keeping data collected in Europe within a local data center.
- D. Conduct a Privacy Impact Assessment (PIA) to evaluate the risks involved.

**Answer: B**

## NEW QUESTION # 223
SCENARIO
Please use the following to answer the next QUESTION:
Ben works in the IT department of IgNight, Inc., a company that designs lighting solutions for its clients.
Although IgNight's customer base consists primarily of offices in the US, some individuals have been so impressed by the unique aesthetic and energy-saving design of the light fixtures that they have requested IgNight's installations in their homes across the globe.
One Sunday morning, while using his work laptop to purchase tickets for an upcoming music festival, Ben happens to notice some unusual user activity on company files. From a cursory review, all the data still appears to be where it is meant to be but he can't shake off the feeling that something is not right. He knows that it is a possibility that this could be a colleague performing unscheduled maintenance, but he recalls an email from his company's security team reminding employees to be on alert for attacks from a known group of malicious actors specifically targeting the industry.
Ben is a diligent employee and wants to make sure that he protects the company but he does not want to bother his hard-working colleagues on the weekend. He is going to discuss the matter with this manager first thing in the morning but wants to be prepared so he can demonstrate his knowledge in this area and plead his case for a promotion.
Going forward, what is the best way for IgNight to prepare its IT team to manage these kind of security events?

- A. Share communications relating to scheduled maintenance.
- B. Tabletop exercises.
- C. IT security awareness training.
- D. Update its data inventory.

**Answer: B**

Explanation:
The best way for IgNight to prepare its IT team to manage these kind of security events is to conduct tabletop exercises. Tabletop exercises are simulated scenarios that test the organization's ability to respond to security incidents in a realistic and interactive way. Tabletop exercises typically involve:
A facilitator who guides the participants through the scenario and injects additional challenges or variables A scenario that describes a plausible security incident based on real-world threats or past incidents A set of objectives that define the expected outcomes and goals of the exercise A set of questions that prompt the participants to discuss their roles, responsibilities, actions, decisions, and communications during the incident response process A feedback mechanism that collects the participants' opinions and suggestions on how to improve the incident response plan and capabilities Tabletop exercises help an organization prepare for and deal with security incidents by:
Enhancing the awareness and skills of the IT team and other stakeholders involved in incident response Identifying and addressing the gaps, weaknesses, and challenges in the incident response plan and process Improving the coordination and collaboration among the IT team and other stakeholders during incident response Evaluating and validating the effectiveness and efficiency of the incident response plan and process Generating and implementing lessons learned and best practices for incident response The other options are not as effective or useful as tabletop exercises for preparing the IT team to manage security events. Updating the data inventory is a good practice for maintaining an accurate and comprehensive record of the personal data that the organization collects, processes, stores, shares, or disposes of. However, it does not test or improve the organization's incident response capabilities or readiness. IT security awareness training is a good practice for educating the IT team and other employees on the basic principles and practices of cybersecurity. However, it does not simulate or replicate the real-world situations and challenges that the IT team may face during security incidents. Sharing communications relating to scheduled maintenance is a good practice for informing the IT team and other stakeholders of the planned activities and potential impacts on the IT systems and infrastructure. However, it does not prepare the IT team for dealing with unplanned or unexpected security events that may require immediate and coordinated response.
