# Unlimited DCA Exam Practice | Updated DCA CBT

P.S. Free & New DCA dumps are available on Google Drive shared by ExamcollectionPass: https://drive.google.com/open?id=1LOeZbRO9CRi0g2Db0NEdWBoX1Un6zKno

Our aim is to provide customers with actual Docker DCA questions so they pass their Docker Certified Associate (DCA) Exam (DCA) exams with confidence. We offer a free demos and up to 365 days of free Docker Dumps updates. One of the key elements of our approach is following the current exam content. Our DCA product is designed by experienced industry professionals and is regularly updated to reflect the latest changes in the DCA test content.

The DCA certification exam is an objective, online-based exam that tests an individual's knowledge and practical skills in various Docker areas. DCA exam consists of 55 multiple choice and multiple select questions with a time limit of 90 minutes to complete. DCA exam is designed to be challenging and requires significant preparation before taking it. Candidates must score a minimum of 65% to pass the exam and earn the DCA certification. Docker Certified Associate (DCA) Exam certification is valid for two years and then must be renewed.

Docker DCA Certification is a valuable credential for IT professionals working with Docker. It validates an individual's knowledge and skills in working with Docker and provides a competitive edge in the job market. To prepare for the exam, individuals should have hands-on experience working with Docker and use the resources available, including official documentation, training courses, and practice exams. Passing the Docker DCA exam is a significant achievement and demonstrates a deep understanding of Docker and its capabilities.

2026 Realistic Unlimited DCA Exam Practice Help You Pass DCA Easily

Where there is life, there is hope. Never abandon yourself. You still have many opportunities to counterattack. If you are lack of knowledge and skills, our DCA guide questions are willing to offer you some help. Actually, we are glad that our DCA Study

Materials are able to become you top choice. Just look at the warm feedbacks from our DCA learning braindumps, we are very popular in the whole market. And our DCA exam guide won't let you down.

Docker Certified Associate (DCA) Exam Sample Questions (Q98-Q103):

NEW QUESTION # 98
What is the difference between the ADD and COPY Dockerfile instructions? (Select two.)

- A. COPY supports regular expression handling while ADD does not.
- B. COPY supports compression format handling while ADD does not.
- C. ADD supports compression format handling while COPY does not.
- D. ADD supports regular expression handling while COPY does not.
- E. ADD supports remote URL handling while COPY does not.

Answer: C,E

NEW QUESTION # 99
Your organization has a centralized logging solution, such as Sptunk.
Will this configure a Docker container to export container logs to the logging solution?
Solution.docker system events- -filter splunk

- A. No
- B. Yes

Answer: A

Explanation:
Explanation
The command docker system events --filter splunk will not configure a Docker container to export container logs to the logging solution. The command docker system events will display real-time events from the Docker daemon, such as container creation, start, stop, etc. The --filter option will filter the events by various criteria, such as type, label, name, etc. However, there is no filter for splunk, and even if there was, it would only show the events related to Splunk, not the container logs. To configure a Docker container to export container logs to Splunk, you need to use the Splunk logging driver, which is a plugin that sends container logs to HTTP Event Collector in Splunk Enterprise and Splunk Cloud. You can use the --log-driver and --log-opt options when creating or running a container to specify the Splunk logging driver and its options, such as the Splunk token, URL, source, sourcetype, index, etc. Alternatively, you can configure the Splunk logging driver as the default logging driver for the Docker daemon by setting the log-driver and log-opts keys in the daemon.json file and restarting Docker. References:
* docker system events
* Splunk logging driver
* How to send Docker containers logs to Splunk?

NEW QUESTION # 100
Will this action upgrade Docker Engine CE to Docker Engine EE?
Solution.Run docker engine activate.

- A. Yes
- B. No

Answer: A

Explanation:
Explanation
Running docker engine activate will upgrade Docker Engine CE to Docker Engine EE. This is a feature that allows you to switch from the Community Edition to the Enterprise Edition without reinstalling Docker or losing any data. You need to have a valid license file and a subscription to Docker EE to use this feature1. Docker EE is a premium version of Docker CE that offers additional features, such as security scanning, image management, and certified plugins23. References:
* Upgrade Docker Engine | Docker Docs
* What is the exact difference between Docker EE (Enterprise Edition), Docker CE (Community Edition) and Docker (Custom Support) - Stack Overflow

* Docker Community Edition or Docker Enterprise Edition - Docker | BoxBoat

NEW QUESTION # 101
Is this the purpose of Docker Content Trust?
Solution: Enable mutual TLS between the Docker client and server.

- A. No
- B. Yes

Answer: A

Explanation:
= Docker Content Trust (DCT) is a feature that allows users to verify the integrity and publisher of container images they pull or deploy from a registry server, signed on a Notary server12. DCT does not enable mutual TLS between the Docker client and server, which is a different security mechanism that ensures encrypted and authenticated communication between the client and the server3. DCT is based on digital signatures and The Update Framework (TUF) to provide trust over arbitrary collections of data1.

* Content trust in Docker | Docker Docs
* Docker Content Trust: What It Is and How It Secures Container Images
* Protect the Docker daemon socket | Docker Docs

NEW QUESTION # 102
Is this a Linux kernel namespace that is disabled by default and must be enabled at Docker engine runtime to be used?
Solution: user

- A. Yes
- B. No

Answer: A

Explanation:
The user namespace is a Linux kernel namespace that is disabled by default and must be enabled at Docker engine runtime to be used. The user namespace allows the host system to map its own uid and gid to some different uid and gid for containers' processes. This improves the security of Docker by isolating the user and group ID number spaces, so that a process's user and group ID can be different inside and outside of a user namespace1. To enable the user namespace, the daemon must start with --userns-remap flag with a parameter that specifies base uid/gid2. All containers are run with the same mapping range according to /etc/subuid and /etc/subgid3. Reference:
Isolate containers with a user namespace
Using User Namespaces on Docker
Docker 1.10 Security Features, Part 3: User Namespace

NEW QUESTION # 103
......

The pass rate is 98.75% for DCA study materials, and if you choose us, we can ensure you pass the exam successfully. In addition, DCA exam dumps of us are edited by professional experts, they are quite familiar with the exam center, therefore DCA study materials cover most of knowledge points. We also pass guarantee and money back guarantee if you fail to pass the exam. We will refund your money to your payment account. Online service stuff for DCA Exam Braindumps is available, and if you have any questions, you can have a chat with us.
