Practice PassQuestion CTFL-AcT Training Questions ensure your 100% success

Question 2

Which one of the following statements describes an exploratory test charter BEST?

- A. Indicating that the tester should take the role of a novice user can be part of an exploratory test charter.
- B. The test charter is elaborated during the testing session according to test execution results.
- C. Each exploratory test charter is based on a previously defined list of activities that would be interesting to test.
- D. Acceptance testers use the exploratory test charter during the testing session to define the test oracle.

Answer: A

In compliance with syllabus of the exam, our CTFL-AcT practice materials are determinant factors giving you assurance of smooth exam. Our CTFL-AcT practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. So, they are specified as one of the most successful CTFL-AcT practice materials in the line. They can renew your knowledge with high utility with Favorable prices. So, they are reliably rewarding CTFL-AcT practice materials with high utility value.

The CTFL-AcT exam covers a broad range of topics, including the fundamentals of acceptance testing, test planning and design, test execution and reporting, and test management. CTFL-AcT exam is intended for individuals who are involved in acceptance testing activities, such as software testers, test analysts, and quality assurance professionals. By obtaining this certification, individuals demonstrate their proficiency in acceptance testing and their commitment to professional development in the field of software testing.

The CTFL-AcT Exam covers various topics related to acceptance testing, including defining the acceptance criteria, developing acceptance tests, executing test cases, and reporting defects. Additionally, the exam assesses the tester's ability to communicate effectively with other stakeholders such as developers, product owners, and business analysts. CTFL-AcT exam is suitable for testers who have a basic understanding of software testing concepts and methods.

Pass Guaranteed Quiz 2026 Authoritative CTFL-AcT: Test ISTQB Foundation Level - Acceptance Testing Engine

Our CTFL-AcT exam materials can lead you the best and the fastest way to reach for the certification and achieve your desired higher salary by getting a more important position in the company. Because we hold the tenet that low quality of the CTFL-AcT Study Guide may bring discredit on the company. Our CTFL-AcT learning questions are undeniable excellent products full of benefits, so our exam materials can spruce up our own image.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q44-Q49):

NEW QUESTION # 44

In a project to develop an online booking system, the team decided to strengthen collaborative work between the business analyst and the testers working on the project. Several concrete joint activities have been identified.

- A. Definition of Beta Testing sessions
- B. Review of risk to prioritize acceptance test
- C. Development of acceptance criteria for user stories
- D. Business needs assessment

Answer: C

Explanation:

Collaboration between business analysts and testers is critical in Agile and acceptance testing environments.

One of the most effective areas of cooperation is the joint development and review of acceptance criteria for user stories. This ensures that criteria are testable, clearly defined, and aligned with stakeholder expectations.

Option B is correct because creating acceptance criteria is where both business analysts (who understand the business needs) and testers (who ensure testability and clarity) contribute effectively.

Other options:

A (Business needs assessment) is typically a responsibility of business analysts, not a joint activity with testers.

C (Review of risk to prioritize acceptance tests) is a valuable activity but comes after criteria are defined.

While it can be collaborative, it's more specific to test planning.

D (Definition of Beta Testing sessions) is less relevant to ongoing collaborative work between testers and BAs - this involves users and release planning.

B). Development of acceptance criteria for user stories

NEW QUESTION # 45

In Agile an exploratory test session is conducted. Which one of the following concepts applies BEST?

- A. refactoring
- B. planning poker
- C. pair programming
- **D. timeboxing Answer**

Answer: D

Explanation:

Exploratory testing in Agile projects is a structured but unscripted testing approach where learning, test design, and execution occur simultaneously. Timeboxing is a key practice in managing exploratory testing sessions effectively.

A timebox is a fixed duration (e.g., 60-90 minutes) within which testers explore specific functionalities or risks. It encourages focus, documentation of findings, and prevents overrun or testing fatigue. After the session, testers often hold debriefs to review findings and determine next steps.

Option D is correct because timeboxing is essential for exploratory testing management.

Incorrect options:

A). Pair programming relates to development, not testing.

B). Refactoring is a development technique focused on improving code without changing behavior.

C). Planning poker is used in Agile for effort estimation, not directly related to exploratory testing.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 3.1):

"Exploratory testing is often conducted in time-boxed sessions, with a charter guiding the scope of the session."

NEW QUESTION # 46

You recently became an acceptance tester in a cross-discipline project, because your predecessor left the company overnight. The 15 project team members are located in different time zones. Everybody seems to work hard on their tasks, but nobody can give you with an overview on the project.

What one of the following actions is BEST to encourage the team members to work closer together?

- A. You establish a test management tool to make sure everybody has Access to the requirements and their related test cases.
- **B. You organize a workshop with all team members to establish common understanding and to lay the foundation for fruitful trusting collaboration**
- C. Knowing about the importance of the personal interactions, you travel from site to site to meet with every project team member and collect their vision
- D. You write a long e-mail summarizing your understanding of the project goals, its current difficulties and indicate the steps required to solve the problem.

Answer: B

Explanation:

In cross-functional, globally distributed teams, establishing collaboration, communication, and trust is key. A workshop (even virtual) is a proven method for initiating alignment, especially when a new team member joins, and project coordination is weak.

Option A promotes transparency and collective understanding, crucial for building team cohesion.

Option B is too passive and one-directional. Long emails rarely solve coordination problems in Agile or collaborative contexts.

Option C is about tool setup, not team integration or communication - tools are supportive but not substitutes for human connection.

Option D is not efficient; traveling to meet each team member is impractical and doesn't guarantee a shared team vision.

A). You organize a workshop with all team members to establish common understanding and to lay the foundation for fruitful trusting collaboration.

NEW QUESTION # 47

As a part of a travel expense reimbursement management system, the following business process is defined:

* After receipt of the expense report, a new account must be created if the employee does not already have one. The report is then reviewed.

* Amounts less than \$200 are automatically approved, while amounts equal to or greater than \$200 must be approved by the supervisor. If the request is rejected, the employee is informed. The employee is reimbursed by payment to his or her bank account.

* If the request is not processed within 7 days, the employee receives an "ongoing" e-mail. If the request is not completed within 30 days, then the process is stopped, and the employee receives a cancellation e-mail asking her/him to resubmit the refund request. The following BPMN model has been submitted for review. Which of the following comments is MOST Likely to have been made on this BPMN model?

- A. The "Supervisor Review" activity should be positioned after the "Send for Payment" activity
- **B. The second timing event should be "30 days" instead of "23 days"**
- C. After "Advise Employee to Start Again" the flow should go to an "end" event
- D. This BPMN model is correct, so there should not be any review comments

Answer: B

Explanation:

Comprehensive Detailed Explanation:

According to the scenario described in the question, the business process for expense reimbursement includes two key timing constraints:

If the request is not processed within 7 days, an "ongoing" email is sent to the employee.

If the request is not completed within 30 days, the process is canceled and the employee is asked to resubmit the request.

However, in the BPMN model presented in the image, the second timing event (clock icon near "Approval in Progress") incorrectly shows 23 days instead of 30 days. This discrepancy misrepresents the actual business rule and violates the accuracy required in process modeling.

ISTQB Foundation Level Extension - Acceptance Testing syllabus and the Certified Tester Foundation Level Business Process Testing (CTFL-BAT) emphasize that a process model should correctly reflect the specified behavior, rules, and constraints of the business scenario. An incorrect timer can lead to miscommunication between stakeholders and incorrect automation or implementation logic.

Therefore, Option A is the most likely review comment since it directly points to this inconsistency in the model.

NEW QUESTION # 48

As an acceptance tester you are analyzing the following user story for a computer web-based mass multiplayer role-playing game:

As an unregistered player

I want to be able to register myself by defining my e-mail, login and password in a registration form so that I become a registered player. Consider the following propositions of the acceptance criteria:

i. a registration form is displayed on the screen.

ii. the form is written in the Groovy language; the cursor is initially set on the 'login' field; after pushing the TAB button the cursor switches to 'password', 'repeat password', 'mail', and 'repeat mail' forms.

iii. I cannot register myself if the login I choose is used by another player.

iv. after successful registration process I am informed about it by an e-mail.

Which of the above statements would you consider as well-written acceptance criteria?

- **A. only i), iii) and iv)**
- B. only ii)
- C. only ii) and iv)
- D. only i) and iii)

Answer: A

Explanation:

Comprehensive Detailed Explanation (Approx. 200 words):

Acceptance criteria should focus on business-relevant outcomes that are specific, testable, and observable. In this user story, the goal is to validate that the registration functionality is available and behaves as expected.

Let's analyze each proposition:

i) "A registration form is displayed on the screen."

Valid. It is observable, specific, and directly aligned with the user story.

ii) "The form is written in the Groovy language; the cursor is initially set on the 'login' field..."

Invalid as acceptance criteria. It contains implementation details (e.g., "Groovy language") irrelevant to business stakeholders.

Also, low-level UI behavior like cursor position is overly technical and not a business-driven criterion.

iii) "I cannot register myself if the login I choose is used by another player."

Valid. It defines system behavior based on a business rule (unique login) and is testable.

iv) "After successful registration process I am informed about it by an e-mail."

Valid. It describes a user-visible outcome after registration, which is observable and testable.

D). only i), iii), and iv) are well-written acceptance criteria.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 1.3.2):

"Acceptance criteria must describe the externally visible and verifiable system behavior, excluding implementation details."
