Unparalleled Test CT-UT Vce Free by DumpsActual

Our CT-UT vce braindumps are the best preparation materials for the certification exam and the guarantee of clearing exam quickly with less effort. You can find latest CT-UT test answers and questions in our pass guide and the detailed explanations will help you understand the content easier. Our experts check the updating of CT-UT free demo to ensure the accuracy of our dumps and create

the pass guide based on the latest information.

ISTQB Certified Tester Usability Tester Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which of the following is a principal task of the usability tester role?

- A. Define testing tasks
- B. Discuss findings from usability test
- **C. Communicate with test participant**
- D. Perform pre-session briefing of participants

Answer: C

Explanation:

The usability tester, often synonymous with the usability test moderator in practice, is primarily responsible for interacting directly with the test participants during the usability testing sessions. This role includes communicating with participants to guide them through test tasks, answering questions without leading responses, and ensuring the session runs smoothly. Effective communication is essential to facilitate participant comfort, elicit genuine user behaviors, and capture accurate usability data.

Performing the pre-session briefing (Option A) may be done by the usability tester but is often a shared responsibility or part of test facilitation protocols. Discussing findings (Option C) typically falls to analysts or usability experts after testing sessions are completed and data analyzed. Defining testing tasks (Option D) is usually done by test designers or analysts during test planning, not during the test execution.

Therefore, communicating with test participants during testing is a core, principal task of the usability tester role.

#####

NEW QUESTION # 40

Why are positive usability findings of high importance? Which of the following statements is wrong?

- A. Positive usability findings make it easier to sell the need for correcting usability problems by giving a balanced view.
- **B. Positive findings are of high importance because they can be used in the report to justify the costs of the test.**
- C. Positive usability findings allow a better view of the usability of the product.
- D. Positive usability findings should be used to communicate to the development team which features should not be modified or deleted.

Answer: B

Explanation:

Positive usability findings play a key role in reinforcing what is working well in the user interface. They help:

A: Build developer confidence and soften criticism when pointing out issues.

C: Provide a complete picture of usability strengths and weaknesses.

D: Inform developers what should remain unchanged during redesign.

However, B is incorrect because justifying usability test costs should not rely solely on positive findings. Cost justification should come from the overall impact of usability on user satisfaction, performance, and business outcomes-not just good results.

#####

NEW QUESTION # 41

Which of the following is the best description for a usability test session?

- A. A test activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time.

- B. A period of time in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers.
- C. A black-box test technique in which test cases are designed to execute usability scenarios.
- D. A document specifying a sequence of actions for the execution of a usability test.

Answer: B

Explanation:

A usability test session is a controlled period during which a test participant performs tasks using the system under test while being observed by a moderator and sometimes additional stakeholders or observers. The goal is to understand how users interact with the interface and identify usability problems. Option A describes an individual task, not the whole session. Option C refers to a test plan or test script, and Option D describes a test technique rather than a usability session. Thus, option B provides the most accurate and comprehensive definition.

#####

NEW QUESTION # 42

In a short conversation, a potential customer mentions that accessibility is of great importance to them. What does this mean?

- A. They use prototyping in their development process
- B. They focus on agile development
- C. They also seek to address users with limitations
- D. They focus on quantitative usability evaluations

Answer: C

Explanation:

When a customer emphasizes the importance of accessibility, it means they are concerned with ensuring that users with disabilities or limitations are not excluded from using their products or services. Accessibility is about inclusiveness-providing equal access and opportunity to all users regardless of physical or cognitive ability. Option C directly reflects this understanding. The other options (A, B, and D) are aspects of usability or development methodologies but do not relate to addressing the needs of users with disabilities, which is the core focus of accessibility.

ADA (Americans with Disabilities Act) in Digital Accessibility Contexts

NEW QUESTION # 43

You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.

Which of the following is a valid approach for evaluating the usability in this case?

- A. Usability testing
- B. User surveys
- C. Usability Review
- D. Accessibility Evaluation

Answer: C

Explanation:

When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method.

Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.

Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.
