Deep-Security-Professional Pass-Sure Braindumps - Deep-Security-Professional Test Cram & Deep-Security-Professional Exam Prep

Are you a fresh man in IT industry, or on the way to become an IT career? The Deep-Security-Professional certification will help you learn professional skills to enhance your personal ability. With our Deep-Security-Professional test engine, you set the test time as you like. Besides, you can make notes and do marks with Deep-Security-Professional test engine. With the notes, you will have a clear idea about your Deep-Security-Professional Exam Preparation. More practice make more perfect, so please take the Deep-Security-Professional exam preparation seriously. Your dreams will come true if you pass the Deep-Security-Professional exam certification. Trust Trend Deep-Security-Professional exam dumps, you will never fail.

Trend Micro Certified Professional for Deep Security Sample Questions (Q66-Q71):

NEW QUESTION # 66

What is the purpose of the Deep Security Notifier?

- A. The Deep Security Notifier is an application in the Windows System Tray that displays the Status of Deep Security Manager during policy and software updates.
- B. The Deep Security Notifier is a server component used in agentless configurations to allow Deep Security Manager to notify managed computers of pending updates.
- C. The Deep Security Notifier is a server component that collects log entries from managed computers for delivery to a configured SIEM device.
- **D. The Deep Security Notifier is an application in the Windows System Tray that communicates the state of Deep Security Agents and Relays to endpoint computers.**

Answer: D

Explanation:

The Deep Security Notifier is a lightweight Windows system tray application that communicates the security status and activity of the local Deep Security Agent or Relay to the endpoint user. It provides pop-up notifications for detected threats, agent status, and protection status. It is not a server component and does not display Deep Security Manager status.

From the official documentation:

"Deep Security Notifier is a lightweight Windows system tray application installed alongside the agent, which provides notifications about agent activity, detected threats, and protection status to endpoint users." Option D is correct (official description).

Option A is incorrect: It does not display Deep Security Manager status.

Option B is incorrect: It is not for log collection or SIEM delivery.

Option C is incorrect: Not used for agentless or update notification.

NEW QUESTION # 67

What is the result of performing a Reset operation on a Deep Security Agent?

- **A. A Reset operation wipes out any Deep Security Agent settings, including its relationship with Deep Security Manager.**
- B. A Reset operation generates Event information that can be used to troubleshoot Agent-to-Manager communication issues.
- C. A Reset operation forces an update to the Deep Security Agent software installed on a managed computer.
- D. A Reset operation forces the Deep Security Agent service to restart on the managed computer.

Answer: A

NEW QUESTION # 68

Which of the following statements is false regarding Firewall rules using the Bypass action?

- A. Firewall rules using the Bypass action do not generate log events.
- B. Firewall rules using the Bypass action allow incoming traffic to skip both Firewall and Intrusion Prevention analysis.
- **C. Applying a Firewall rule using the Bypass action to traffic in one direction automatically applies the same action to traffic in the other direction.**
- D. Firewall rules using the Bypass action can be optimized, allowing traffic to flow as efficiently as if a Deep Security Agent was not there.

Answer: C

Explanation:

Firewall rules using Bypass have the following noteworthy characteristics:

* Bypass skips both Firewall and Intrusion Prevention analysis.

* Since stateful inspection is for bypassed traffic, bypassing traffic in one direction does not automatically bypass the response in the other direction. As a result firewall rules using Bypass are always created in pairs, one for incoming traffic and another for outgoing.

* Firewall rules using Bypass will not be logged. This is not a configurable behavior.

* Some firewall rules using Bypass are optimized, in that traffic will flow as efficiently as if the Deep Security Agent/Deep Security Virtual Appliance was not there.

NEW QUESTION # 69

Your organization stores PDF and Microsoft Office files within the SAP Netweaver platform and requires these documents to be scanned for malware. Which Deep Security component is required to satisfy this requirement?

- A. Deep Security Scanner is required.
- B. A Smart Protection Server must be installed and configured to service the SAP Netweaver platform
- C. No extra components are required, this can be done by enabling the AntiMalware Protection Module on the SAP Netweaver server.
- D. The Netweaver plug-in must be installed on the Deep Security Agent.

Answer: A

Explanation:

Deep Security Scanner provides integration with the SAP NetWeaver platform and performs anti-malware scans and reviews the information to identify potential threats in SAP systems.

Note: Deep Security Scanner is not supported on computers where the Deep Security Agent is enabled as a Relay.

Explanation: Study Guide - page (26)

NEW QUESTION # 70

The details for an event are displayed in the exhibit. Based on these details, which Protection Module generated the event?

- A. Firewall
- B. Application Control
- C. Intrusion Prevention
- D. Integrity Monitoring

Answer: C

Explanation:

The event shows a "Reason" that references a specific rule (1000847 - OpenLDAP LDAP Server BIND Request DoS), an "Action" of "Reset," and the event origin as "Agent." This format is specific to the Intrusion Prevention module, which detects and responds to network exploits using assigned rules and provides detailed event logs including signature ID, action taken, and protocol information. The other modules do not use signature IDs or these response actions.
