In order to make life better, attending Fortinet certification examinations will be the best choice for every IT workers. Passing FCSS\_SDW\_AR-7.4 exam and obtaining a certification help candidates get salary raise and position promotion opportunities. It will be a fast and convenient road to success for the certification with our Fortinet FCSS\_SDW\_AR-7.4 Practice Test Engine. As for our guaranteed pass policy, our products are too good a change to miss for ambitious people.

### Fortinet FCSS\_SDW\_AR-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Advanced IPsec: Intended for security engineers, this section covers the deployment of advanced IPsec topologies for SD-WAN, including hub-and-spoke models, ADVPN configurations, and complex multi-hub or multi-region deployments. Candidates need to demonstrate expertise in securing wide-area networks using IPsec technologies.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Rules and Routing: Targeted at network engineers, this section assesses the ability to configure SD-WAN rules and routing policies. Candidates will be tested on managing traffic flow and prioritization across the SD-WAN infrastructure.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>SD-WAN Configuration: This section of the exam measures the skills of network engineers and covers configuring a basic SD-WAN setup. Candidates are expected to demonstrate their ability to define SD-WAN members and zones effectively, ensuring foundational network segmentation and management.</li></ul>

### Valid FCSS\_SDW\_AR-7.4 Exam Question & New FCSS\_SDW\_AR-7.4 Braindumps Free

How you can gain the FCSS\_SDW\_AR-7.4 certification with ease in the least time? The answer is our FCSS\_SDW\_AR-7.4 study materials for we have engaged in this field for over ten years and we have become the professional standard over all the exam materials. You can free download the demos which are part of our FCSS\_SDW\_AR-7.4 Exam Braindumps, you will find that how good they are for our professionals devote of themselves on compiling and updating the most accurate content of our FCSS\_SDW\_AR-7.4 exam questions.

### Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q38-Q43):

### NEW QUESTION # 38

In which SD-WAN template field can you use a metadata variable?

- A. Any field identified with a dollar sign (\$) in a magnifying glass.
- B. All SD-WAN template fields support metadata variables.
- C. Any field identified with an "M" in a circle.
- D. You can use metadata variables only to define interface members and the gateway IP.

Answer: C

### NEW QUESTION # 39

Refer to the exhibits. The exhibits show two IPsec templates to define Branch IPsec 1 and Branch\_IPsec\_2. Each template defines a VPN tunnel. The error message that FortiManager displayed when the administrator tried to assign the second template to the FortiGate device is also shown. Which statement best describes the cause of the issue?

#### IPsec template for Branch\_IPsec\_1

Name	Type	Outgoing Interface
HUB1-VPN1	Static	\$(ISP1)

#### IPsec template for Branch\_IPsec\_2

Name	Type	Outgoing Interface
HUB1-VPN2	Static	\$(ISP2)

#### Error message in FortiManager

invalid template assignment - conflicting template assignment scope: device branch1\_fgt, vdom root, \_ipsec template [Branch\_IPsec\_1] and [Branch\_IPsec\_2]

- A. You can assign only one template with a tunnel type of static to each FortiGate device.

- B. You should review the branch1\_fgt configuration for configured tunnels in the rootVDM.
- **C. You can assign only one IPsec template to each FortiGate device.**
- D. You should use the same outgoing interface of both templates.

**Answer: C**

Explanation:

FortiManager allows only one IPsec template to be assigned per FortiGate device. The error indicates a conflicting template assignment, meaning assigning both Branch\_IPsec\_1 and Branch\_IPsec\_2 to the same device (branch1\_fgt) is not permitted.

#### NEW QUESTION # 40

Refer to the exhibit.

```

config system sdwan
    config health_check
        edit "DNS"
            set server "4.2.2.1" "4.2.2.2"
            set detect-mode active
            set protocol ping
            set embed-measured-health enable
            set members 3 4
            config sla
                edit 1
                    set link-cost-factor latency
                    set latency-threshold 100
            end
        end
    next
end
end

```

The exhibit shows the health-check configuration on a FortiGate device used as a spoke. You notice that the hub FortiGate doesn't prioritize the traffic as expected.

Which two configuration elements should you check on the hub? (Choose two.)

- A. This performance SLA uses the same members.
- **B. The performance SLA is configured with set embedded-measure accept.**
- C. The performance SLA has the parameter priority-out-sla configured.
- **D. The performance SLA uses the same criteria.**

**Answer: B,D**

Explanation:

The hub must use a performance SLA with the same criteria as the spoke's health check. The spoke's health check is using ping (protocol ping) and measuring latency (link-cost-factor latency). For the hub to use the data sent by the spoke, its performance SLA must be configured to measure the same metrics. If the hub is looking for jitter or packet loss, it will not use the latency data sent by the spoke.

When a spoke sends embedded health data, the hub FortiGate must be configured to receive and use it. This is done by setting set embedded-measure accept within the performance SLA configuration on the hub. This setting explicitly tells the hub to trust and use the performance metrics received from the remote FortiGate (the spoke). Without this setting, the hub will likely ignore the embedded health data and rely on its own health checks, which could lead to incorrect traffic prioritization.

#### NEW QUESTION # 41

What is true about SD-WAN multiregion topologies?

- A. Regions must correspond to geographical areas.
- B. Routing between the hub and spokes must be BGP.
- C. It is not compatible with ADVPN.
- D. Each region has its own SD-WAN topology.

**Answer: D**

#### NEW QUESTION # 42

The SD-WAN overlay template helps to prepare SD-WAN deployments. To complete the tasks performed by the SD-WAN overlay template, the administrator must perform some post-run tasks.

What are two mandatory post-run tasks that must be performed? (Choose two.)

- A. Create policy packages and assign them to the branch devices.
- B. Configure routing through the overlay tunnels created by the SD-WAN overlay template.
- C. Configure SD-WAN rules
- D. Assign an sdwan\_id metadata variable to each device (branch and hub)
- E. Assign a hub id metadata variable to each hub device.

**Answer: A,C**

#### NEW QUESTION # 43

.....

It is known to us that the FCSS\_SDW\_AR-7.4 exam has been increasingly significant for modern people in this highly competitive word, because the FCSS\_SDW\_AR-7.4 test certification can certify whether you have the competitive advantage in the global labor market or have the ability to handle the job in a certain area, especial when we enter into a newly computer era. Therefore our FCSS\_SDW\_AR-7.4 practice torrent is tailor-designed for these learning groups, thus helping them pass the FCSS\_SDW\_AR-7.4 exam in a more productive and efficient way and achieve success in their workplace.
