Exam AZ-800 Tests | Test AZ-800 Result

Time is nothing: timing is everything. Stop hesitating. AZ-800 VCE dumps help you save time to clear exam. If you choose valid exam files, you will pass exams one-shot; you will obtain certification in the shortest time with our Microsoft VCE dumps. If you complete for a senior position just right now, you will have absolutely advantage over others. Now, don't wasting time again, just start from our AZ-800 VCE Dumps. Excellent & valid VCE dumps will make you achieve your dream and go to the peak of your life ahead of other peers.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q62-Q67):

NEW QUESTION # 62

You need to meet the technical requirements for VM1.

Which cmdlet should you run first? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Microsoft

VM1	<input type="checkbox"/> Set-VM <input type="checkbox"/> Set-VMBios <input type="checkbox"/> Set-VMHost <input type="checkbox"/> Set-VMFirmware <input type="checkbox"/> Set-VMProcessor	\$true
	<input type="checkbox"/> -NewVMName <input type="checkbox"/> -GuestControlledCacheTypes <input type="checkbox"/> -EnableHostResourceProtection <input type="checkbox"/> -ExposeVirtualizationExtensions	

Answer:

Explanation:

Microsoft

VM1	<input type="checkbox"/> Set-VM <input type="checkbox"/> Set-VMBios <input checked="" type="checkbox"/> Set-VMHost <input type="checkbox"/> Set-VMFirmware <input type="checkbox"/> Set-VMProcessor	\$true
	<input checked="" type="checkbox"/> -NewVMName <input checked="" type="checkbox"/> -GuestControlledCacheTypes <input type="checkbox"/> -EnableHostResourceProtection <input type="checkbox"/> -ExposeVirtualizationExtensions	

NEW QUESTION # 63

You need to implement an availability solution for DHCP that meets the networking requirements.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. On the router in each office, configure a DHCP relay.
- B. On DHCP1, create a scope that contains 25 percent of the IP addresses from Scope2.
- C. On each DHCP scope, configure DHCP failover.
- D. DHCP2, configure a scope that contains 25 percent of the IP addresses from Scope 1 .
- E. On each DHCP server, install the Failover Clustering feature and add the DHCP cluster role.

Answer: A,C

Explanation:

NEW QUESTION # 64

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

The virtual machines will be joined to Azure AD DS.

You need to deploy Active Directory Domain Services (AD DS) to ensure that the virtual machines can be deployed and joined to Azure AD DS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Modify the settings of the Azure virtual network.	> <
Install the Active Directory Domain Services role.	
Install Azure AD Connect.	> <
Create an Azure virtual network.	> <
Create an Azure AD DS instance.	> <
Run the Active Directory Domain Service installation Wizard.	> <

Answer:

Explanation:

Actions

-  **Modify the settings of the Azure virtual network.**
- Install the Active Directory Domain Services role.**
- Install Azure AD Connect.**
- Create an Azure virtual network.**
- Create an Azure AD DS instance.**
- Run the Active Directory Domain Service installation Wizard.**

Answer Area

- Create an Azure virtual network.**
- Create an Azure AD DS instance.**
-  **Modify the settings of the Azure virtual network.**

NEW QUESTION # 65

Task 9

You plan to create group managed service accounts (gMSAs).

You need to configure the domain to support the creation of gMSAs.

Answer:

Explanation:

See the solution of this Task below

Explanation:

To configure the domain to support the creation of gMSAs, you need to perform the following steps:

On a domain controller or a computer that has the Remote Server Administration Tools (RSAT) installed, open PowerShell as an administrator and run the following command to install the Active Directory module:

Install-WindowsFeature -Name RSAT-AD-PowerShell

Run the following command to create a Key Distribution Service (KDS) root key, which is required for generating passwords for gMSAs. You only need to do this once per domain:

Add-KdsRootKey -EffectiveImmediately

Wait for at least 10 hours for the KDS root key to replicate to all domain controllers in the domain. Alternatively, you can use the -

EffectiveTime parameter to specify a past date and time for the KDS root key, but this is not recommended for security reasons. For more information, see Add-KdsRootKey.

After the KDS root key is replicated, you can create and configure gMSAs using the New-ADServiceAccount and Set-ADServiceAccount cmdlets. For more information, see Create a gMSA and Configure a gMSA.

NEW QUESTION # 66

You need to meet the technical requirements for Server4.

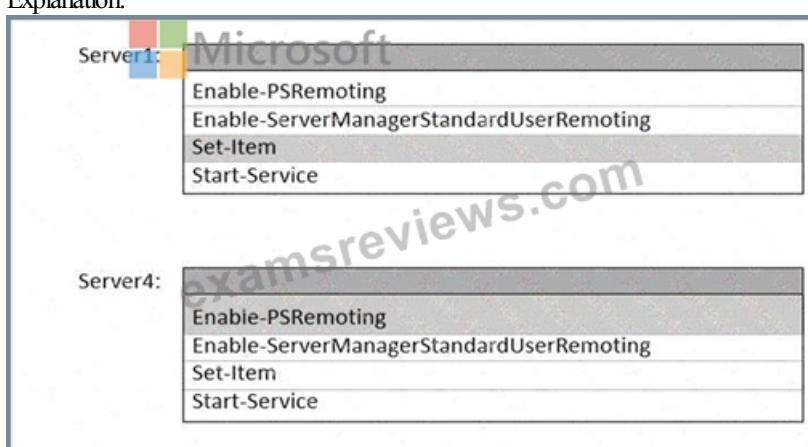

Which cmdlets should you run on Server1 and Server4? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Topic 1, Contoso Ltd

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements, if the case study has an All Information tab. Note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

AD DS Environment

The network contains an on-premises Active Directory Domain Services (AD DS) forest named contoso.com.

The forest contains two domains named contoso.com and canada.contoso.com. The forest contains the domain controllers shown in the following table.

All the domain controllers are global catalog servers.

Server Infrastructure

The network contains the servers shown in the following table.

A server named Server4 runs Windows Server and is in a workgroup. Windows Firewall on Server4 uses the private profile.

Server2 hosts three virtual machines named VM1, VM2, and VM3.

VM3 is a file server that stores data in the volumes shown in the following table.

Group Policies

The contoso.com domain has the Group Policies Objects (GPOs) shown in the following table.

Existing Identities

The forest contains the users shown in the following table.

The forest contains the groups shown in the following table.

□ Current Problems

When an administrator signs in to the console of VM2 by using Virtual Machine Connection, and then disconnects from the session without signing out another administrator can connect to the console session as the currently signed-in user.

Requirements

Contoso identifies the following technical requirements:

- * Change the replication schedule for all site links to 30 minutes.
- * Promote Server1 to a domain controller in canada.contoso.com.
- * Install and authorize Server3 as a DHCP server.
- * Ensure that User1 can manage the membership of all the groups in Contoso\OU3.
- * Ensure that you can manage Server4 from Server1 by using PowerShell removing.
- * Ensure that you can run virtual machines on VM1.
- * Force users to provide credentials when they connect to VM2.
- * On VM3, ensure that Data Deduplication on all volumes is possible.

NEW QUESTION # 67

If you buy the ExamsReviews's products, we will not only spare no effort to help you pass the certification exam, but also provide a free update and upgrade service. If the official change the outline of the certification exam, we will notify customers immediately. If we have any updated version of test software, it will be immediately pushed to customers. ExamsReviews can promise to help you succeed to pass your first Microsoft Certification AZ-800 Exam.
