- A. BOOTP port 67
- B. DHCP option 66
- C. DHCP option 69
- D. BOOTP port 68

Answer: B

Explanation:

Command	Purpose
<code>dhcpd option 66 ascii server_name</code>	Provides the IP address or name of a TFTP server for option 66.
Example: <code>hostname(config)# dhcpd option 66 ascii exampleserver</code>	

DHCP options 3, 66, and 150 are used to configure Cisco IP Phones. Cisco IP Phones download their configuration from a TFTP server. When a Cisco IP Phone starts, if it does not have both the IP address and TFTP server IP address preconfigured, it sends a request with option 150 or 66 to the DHCP server to obtain this information. + DHCP option 150 provides the IP addresses of a list of TFTP servers. + DHCP option 66 gives the IP address or the hostname of a single TFTP server.

- D. interface Loopback0
