## Excellent Data-Architect Mock Exams - Reliable Source of Data-Architect Exam

As what have been demonstrated in the records concerning the pass rate of our Data-Architect free demo, our pass rate has kept the historical record of 98% to 99% from the very beginning of their foundation. Although at this moment, the pass rate of our Data-Architect test torrent can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our Data-Architect Preparation materials win a place in the field of Data-Architect exam question making forever.

## Salesforce Certified Data Architect Sample Questions (Q202-Q207):

### NEW QUESTION # 202

Company S was recently acquired by Company T. As part of the acquisition, all of the data for the Company S's Salesforce

instance (source) must be migrated into the Company T's Salesforce instance (target). Company S has 6 million Case records. An Architect has been tasked with optimizing the data load time. What should the Architect consider to achieve this goal?

- A. Load the data in multiple sets using Bulk API parallel processes.
- **B. Pre-process the data, then use Data Loader with SOAP API to upsert with zip compression enabled.**
- C. Utilize the Salesforce Org Migration Tool from the Setup Data Management menu.
- D. Directly leverage Salesforce-to-Salesforce functionality to load Case data.

**Answer: B**

Explanation:

Pre-processing the data means transforming and cleansing the data before loading it into Salesforce. This can reduce the errors and conflicts that might occur during the data load. Using Data Loader with SOAP API to upsert with zip compression enabled can also improve the performance and efficiency of the data load by reducing the network bandwidth and avoiding duplication

#### **NEW QUESTION # 203**

Northern Trail Outfitters Is planning to build a consent form to record customer authorization for marketing purposes. What should a data architect recommend to fulfill this requirement?

- **A. Utilize the Authorization Form Consent object to capture the consent.**
- B. Use custom fields to capture the authorization details.
- C. Use AppExchange solution to address the requirement.
- D. Create a custom object to maintain the authorization.

**Answer: A**

#### **NEW QUESTION # 204**

Universal Containers (UC) is migrating from a legacy system to Salesforce CRM, UC is concerned about the quality of data being entered by users and through external integrations.

Which two solution should a data architect recommend to mitigate data quality issues?

- A. Leverage Apex to validate the format of data being entered via a mobile device.
- B. Leverage third-party- AppExchange tools
- **C. Leverage picklist and lookup fields where possible**
- **D. Leverage validation rules and workflows.**

**Answer: C,D**

#### **NEW QUESTION # 205**

NTO has been using salesforce for sales and service for 10 years. For the past 2 years, the marketing group has noticed a raise from 0 to 35 % in returned mail when sending mail using the contact information stored in salesforce.

Which solution should the data architect use to reduce the amount of returned mails?

- **A. Use a 3rd-party data source to update contact information in salesforce.**
- B. Email all customer and asked them to verify their information and to call NTO if their address is incorrect.
- C. Delete contacts when the mail is returned to save postal cost to NTO.
- D. Have the sales team to call all existing customers and ask to verify the contact details.

**Answer: A**

#### **NEW QUESTION # 206**

Northern Trail Outfitter has implemented Salesforce for its associates nationwide, Senior management is concerned that the executive dashboard is not reliable for their real-time decision-making. On analysis, the team the following issues with data entered in Salesforce.

Information in certain records is incomplete.

Incorrect entry in certain fields causes records to be excluded in report filters.

Duplicate entries cause incorrect counts.

Which three steps should a data architect recommend to address the issues?

- A. Periodically export data to cleanse data and import them back into Salesforce for executive reports.
- **B. Leverage Salesforce features, such as validate rules, to avoid incomplete and incorrect records.**
- **C. Build a sales data warehouse with purpose-built data marts for dashboards and senior management reporting.**
- **D. Explore third-party data providers to enrich and augment information entered in Salesforce.**
- E. design and implement data-quality dashboard to monitor and act on records that are incomplete or incorrect

**Answer: B,C,D**

Explanation:

According to the Salesforce documentation<sup>3</sup>, data quality is the measure of how well the data in Salesforce meets the expectations and requirements of the users and stakeholders. Data quality can be affected by various factors, such as data entry errors, data duplication, data inconsistency, data incompleteness, data timeliness, etc. To address the issues with data quality that affect the reliability of executive dashboards, a data architect should recommend:

Building a sales data warehouse with purpose-built data marts for dashboards and senior management reporting (option B). This means creating a separate database or system that stores and organizes sales data from Salesforce and other sources for analytical purposes. A data warehouse can provide a single source of truth for sales data and enable faster and more accurate reporting and analysis. A data mart is a subset of a data warehouse that focuses on a specific subject or business area, such as sales performance, customer segmentation, product profitability, etc. A data mart can provide tailored and relevant data for different users or groups based on their needs and interests.

Exploring third-party data providers to enrich and augment information entered in Salesforce (option C). This means using external services or tools that can validate, correct, update, and enhance the data that is entered or imported into Salesforce. This can help improve data quality and accuracy, and reduce data duplication and incompleteness.

Leveraging Salesforce features, such as validation rules, to avoid incomplete and incorrect records (option D). This means using features that allow defining rules and criteria to validate the data that is entered or updated by the users or integrations. This can help prevent invalid or incorrect data from being saved, and trigger actions or alerts to correct or improve the data.

Periodically exporting data to cleanse data and import them back into Salesforce for executive reports (option A) is not a good solution, as it can be time-consuming, error-prone, and inefficient. It may also cause data inconsistency and synchronization issues between Salesforce and other systems. Designing and implementing data-quality dashboard to monitor and act on records that are incomplete or incorrect (option E) is also not a good solution, as it can be complex, costly, and difficult to maintain. It may also not address the root causes of data quality issues or prevent them from occurring in the first place.

## NEW QUESTION # 207

.....

Our website has focused on the study of Data-Architect vce braindumps for many years and created latest Data-Architect dumps pdf for all level of candidates. All questions and answers are tested and approved by our IT professionals who are specialized in the Data-Architect Pass Guide.
