

156-836 Actual Exam Dumps & 156-836 Test Certification Cost

P.S. Free & New 156-836 dumps are available on Google Drive shared by PracticeVCE: <https://drive.google.com/open?id=1ZmrFnm946bvcNw3cCWrfkDDefAZvXyg4>

Everyone has their own characteristics when they start to study our 156-836 exam questions. In order for each user to find a learning method that suits them, we will provide you with a targeted learning version and study plan. There are three versions of the 156-836 Practice Engine for you to choose: the PDF, Software and APP online. And further more, we have free demos of the 156-836 learning guide on the website for you to download before you make the purchase.

Passing the CCME exam is a great achievement for IT professionals who want to advance their careers in network security. Check Point Certified Maestro Expert - R81 (CCME) certification demonstrates the candidate's ability to manage and deploy complex Check Point networks, making them a valuable asset to any organization. Additionally, certified professionals are eligible for higher salaries and promotions, making it a worthwhile investment for those looking to grow in their careers.

The Check Point Certified Maestro Expert (CCME) certification is an expert-level certification that requires the candidate to have in-depth knowledge and practical experience in deploying and managing Check Point Maestro. Check Point Certified Maestro Expert - R81 (CCME) certification exam is designed to test the candidate's ability to design, deploy, and manage large-scale security solutions using Check Point Maestro. The CCME certification exam is a proctored exam that takes approximately 120 minutes to complete.

The CCME certification is a valuable addition to the credentials of cybersecurity professionals. It demonstrates the candidate's expertise in Maestro technologies and their ability to manage large-scale networks. Check Point Certified Maestro Expert - R81 (CCME) certification is recognized globally and is highly valued by employers in the cybersecurity industry.

CheckPoint 156-836 Test Certification Cost & New 156-836 Test Online

Are you racking your brains for a method how to pass CheckPoint 156-836 exam? CheckPoint 156-836 certification test is one of the valuable certification in modern IT certification. Within the last few decades, IT got a lot of publicity and it has been a necessary and desirable part of modern life. CheckPoint certification has been well recognized by international community. So, most IT people

want to improve their knowledge and their skills by CheckPoint certification exam. 156-836 test is one of the most important exams and the certificate will bring you benefits.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q29-Q34):

NEW QUESTION # 29

Is it possible to define distribution mode per interface?

- A. No, only for the Security Group
- B. Yes, only for downlink interfaces
- C. Yes, only for uplink interfaces
- **D. Yes, for both uplink and downlink interfaces**

Answer: D

Explanation:

Maestro allows you to define the distribution mode per interface, which determines how traffic is distributed among the Security Group Modules (SGMs) in a Security Group. You can configure the distribution mode for each interface individually, or use the default mode for all interfaces. The distribution mode can be set for both uplink and downlink interfaces.

NEW QUESTION # 30

What is the Correction Layer mechanism?

- A. The load-balancing mechanism used by the MHO.
- **B. Ensures asymmetric traffic is handled properly, especially in the case of NAT or VPNs.**
- C. Enforces the access policy on the SGMs and synchronizes the enforcement verdict to other SGMs in the SG.
- D. The MHO's distribution algorithm which determines the handling SGM for a given connection.

Answer: B

Explanation:

The Correction Layer mechanism is a Maestro component that ensures that packets from the same connection are handled by the same Security Group Module (SGM) in a multi-appliance system. This is especially important when NAT or VPNs are involved, as packets sent from the client to the server can be distributed to a different SGM than packets from the same session sent from the server to the client. The Correction Layer must then forward the packet to the correct SGM.

NEW QUESTION # 31

At a minimum, how many management and Uplink ports does a SG require?

- **A. One each.**
- B. Neither are required.
- C. Only one of the two interfaces is needed for the Security Group.
- D. Two of each.

Answer: A

Explanation:

A Security Group (SG) requires at least one management port and one uplink port to function properly. The management port is used to connect the SG to the Maestro Hyperscale Orchestrator (MHO) and the customer's management infrastructure, such as SmartConsole or SmartDomain Manager. The uplink port is used to connect the SG to the customer's network infrastructure, such

as switches, routers, or firewalls. The uplink port is also used to send and receive traffic from the customer's network to the SG.

NEW QUESTION # 32

What can be learned from the output of `sx_api_ports_dump.py` command?

- **A. Information about backplane bonds**
- B. Information about Security Groups
- C. Information about downlink ports only
- D. Orchestrator port status

Answer: A

Explanation:

NEW QUESTION # 33

What type of license is required for an MHO?

- A. A license is needed for each attached SGM.
- B. The MHO requires a VSX license.
- **C. The MHO does not require a license.**
- D. The MHO requires a NGTP license.

Answer: C

Explanation:

Explanation

The MHO (Maestro Hyperscale Orchestrator) does not require a license by itself, but each SGM (Security Group Module) that is attached to the MHO needs a license. The license type depends on the features and blades that are enabled on the SGM. For example, if the SGM is running VSX, it needs a VSX license.
